

Your Rx for identifying and managing pharmaceutical waste.

Do you have the time and expertise to classify every pharmaceutical in your inventory by its hazardous waste status? Can you do the same for new drugs just entering the marketplace? And do you know how to properly manage that waste?

Our Inventory Analysis and Waste Wizard* give you a clear picture of your pharmaceutical waste. The Inventory Analysis provides – usually within 10 working days – the waste disposal information you need to achieve compliance. Using your own staff to complete an assessment of this caliber would take months. And the patented online Waste Wizard provides the information you need to stay in compliance.

Both tools chart your pharmacy's inventory information according to the U.S. Environmental Protection Agency's Resource Conservation and Recovery Act (RCRA). Together, they provide the most cost-effective means available to categorize your pharmaceutical waste.

The Inventory Analysis and Waste Wizard at a Glance

Send us your inventory information. We'll identify all federally hazardous and PharmE Hazardous® waste and provide waste management recommendations. In addition, this tool will provide:

- A listing of all P, U, D and PharmE Hazardous® drugs, including their specific waste container and handling requirements.
- DOT shipping descriptions.
- Material Safety Data Sheet (MSDS) links for EPA hazardous wastes and OSHA hazardous drugs.
- A site-specific Web-based subscription where you can search for information on more than 170,000 drugs. This database is updated weekly to reflect new drugs and existing drugs that have new National Drug Codes.
- An alphabetical listing of potential OSHA hazardous drugs.
- This tool provides a link to your state's hazardous waste regulations. Some state regulations are stricter than the federal regulations.

The PharmE Hazardous® category classifies waste that, while not technically hazardous, has the potential to cause harm and causes concern to many environmental experts.
