

Commitment to the Environment

Waste Management of Orange County is committed to lessening our carbon footprint on the environment. Our efforts distinguish us as the foremost leader in environmental protection and solid waste management excellence.

One of the ways we help protect the environment is by running a fleet of natural gas-powered trash hauling trucks out of our two hauling facilities in Orange County. These trucks allow us to not only be an environmental steward, but also to help the cities we serve to go green.

Compressed Natural Gas (CNG)

CNG is a clean burning fuel that is better for the environment than traditional petroleum based gasoline.

CNG Vehicles

CNG powered vehicles produce almost half of the emissions that federal guidelines allow, making Waste Management's hauling vehicles among the cleanest fleets of heavy-duty trucks in the United States. Waste Management of Orange County operates 54 CNG trucks.

Operating the Orange County fleet of clean burning trucks is equivalent to taking over 4,000 vehicles off the road each day!
