

Sustainability Services helps a major pharmaceutical company run a healthy business.

In the early 1990s, a recognized leader in the pharmaceutical industry, with multiple campuses across the U.S., needed to implement compliant waste management services and precise, timely execution to streamline operations and minimize overall disposal costs. That's when Waste Management and our Sustainability Services team joined forces with the company to become an integral part of its everyday operations and protect the health of the business.

Waste Management began servicing the company in 1993 with a single staff member and has expanded the team to include 16 on-site team members who provide a wide variety of waste management services that are critical to daily production and research schedules.

Today, Waste Management Sustainability Services provides value-added services ranging from managing more than 1,000 waste profiles, arranging chemical pickup and disposal, and providing intra-campus disposal and bio-hazard collection, all under the scope of one single monthly invoice.

In 2008 alone, Waste Management shipped 15,851 biohazardous waste containers and 5,815 hazardous waste containers (55 gallons or less) and processed 53,992 pounds of lab pack wastes. And today, we continue to do the heavy lifting to keep the company fit and strong.

For more information on this and other ways Waste Management can help your company find cost savings through environmental efforts, please visit www.wmsustainabilityservices.com or contact us at: 877 441 3046 or sustainabilityservices@wm.com.
