Re: Notice of Incomplete Application
Part 360 Permit Modification
DEC #4-0101-00185/00002
Waste Management of NY, LLC
Port of Albany Transfer Station
100 Boat Street, Albany
City of Albany, Albany County

File: 1242.062.002

Dear Ms. Stewart:

We have received your comments sent to Waste Management on March 16, 2020 regarding the Department's review for the proposed modification to the existing Part 360 Permit for the Waste Management of NY, LLC (WM) facility located in the Port of Albany in the City of Albany, Albany County. On behalf of Waste Management our responses to your comments are in bold below:

Engineering Report

Comment No. 1: In Section 2.1. Facility Operating Plan: please clarify that attendants will be on duty during Saturday hours of operation.

Response No. 1: **Section 2.1 states that an attendant will be on duty during all hours of operation. The language has been revised to clarify this point, as requested. The revised Engineering Report is included as Attachment 1.**

Comment No. 2: In Section 2.3 Transfer Plan: please separate recycle facilities from disposal facilities. Also please add in language in this section about transfer of recyclables.

Response No. 2: **Comment noted. Additional discussion has been added to Section 2.3 to discuss the separate handling of MSW/C&D and recyclables. In addition, the recycling outlets have been removed from Table 2-2 and have been incorporated into a new table; Table 2-3- Recycling Facilities.**

Comment No. 3 Section 2.3 Transfer Plan indicates each transfer trailer holds on average approximately 26.5 tons of MSW/C&D. Please provide the outgoing volume of transfer trailers hauling metals, old corrugated cardboard and metals.

Response No. 3: **From historical data, average payloads of each material are as follows: 10 tons of old corrugated cardboard in a transfer trailer, an average of 15 tons of material per single stream recyclables in a transfer trailer and 3 tons of metal in a roll off container was used to calculate projected traffic. Section 2.3. Transfer Plan has been reviewed and this information has been added to it.**

Comment No. 4: Section 2.6 On-Site Roads indicates the site does not typically require the queuing of trucks at the site entrance and that sufficient queuing capacity is available within the site boundaries. Is there any recollection in the history of operation where trucks have been queued up, waiting outside the site boundaries when the facility opens at 6:00am? If so, please provide the overall number of occurrences and the number of trucks queue(s).

a. Please provide information on how the facility will handle potentially queued traffic as a result of the proposed permit modification.

Response No. 4: **Upon review with site staff, there has been no such instance of vehicle queuing on the road outside of transfer station hours. The video footage of the facility's entrance gate from 7/13/2020 – 7/29/2020 showed no queuing of vehicles at 6 a.m. Typically the site access gate is open before opening at 6 a.m. allowing any early vehicles to queue on-site if necessary. Signage prohibiting queuing prior to facility opening will be installed at the entrance and enforced by rejecting loads from vehicles which queue off-site. This additional signage has been added to the revised Facility Manual included as Attachment 2.**

Comment No. 5: Section 3.0 Noise Assessment indicates it is not necessary to perform a Noise Assessment as part of this permit modification as there will be no change in the amount of permitted tons per day received at the facility or quantity or type of equipment operating.

a. Please send a copy of the noise study upon which resulted in your determination that the levels meet Part 360.

b. Will the addition of MSW waste change current noise levels at the facility due to any changed processes or operations? Will the addition of MSW waste change current noise levels at the facility, due to any changed processes or operations and/or due to truck traffic in the vicinity? Please refer to the January 13, 2020 letter sent by the City of Albany. Please include a discussion in the updated noise evaluation to address the noise requirements outlined within 6 NYCRR Part 360.19(j).

Response No. 5:

a. Previous applications for permits or permit modifications associated with this facility have generally stated that due to the industrial nature of the facility location (the Port of Albany), noise levels would not create a nuisance. In August 2020, a noise monitoring protocol for assessment of current noise levels at the facility was submitted to the NYSDEC for approval. This protocol proposed taking sound readings at the property line closest to potential residential receptors during a typical operational hour at the facility during both early morning (6:00 a.m. – 7:00 a.m.) and daytime (1:00 p.m. – 2:00 p.m.) to verify compliance with 360.19(j). The NYSDEC approved the protocol, however, the letter stated that "WM is not required to be monitored for Part 360 compliance per 6 NYCRR Part 360.19(j)" due to the adjacent property lines being commercial/ industrial facilities. To reinforce this determination from the Department, a Part 360 noise compliance assessment was undertaken in accordance with the approved protocol. The results of the assessment indicate compliance with Part 360.19(j). The Part 360 compliance assessment, including NYSDEC correspondence, is incorporated into the Operating Noise Impact Assessment discussed below and included in Attachment 3.

b. As previously described in the Permit Modification Application, no change in noise is expected from facility operations due to the change in the type of waste accepted at the transfer station. The waste will be handled with the same type and number of pieces of equipment as per the current operation. This equipment will be operating within the transfer station structure, with the facility doors normally closed.

In order to further clarify the current and future noise impacts from the facility, an operating noise impact assessment was performed to compare current noise levels, currently permitted noise levels, and proposed noise levels at the facility boundary. This assessment accounted for facility operational equipment as well as vehicles accessing the facility under these conditions. Using actual noise readings for current peak conditions, future peak conditions were modeled based on the projected peak traffic hour. The assessment concludes that property line noise levels under peak proposed conditions would not exceed current peak noise levels at the same locations. A copy of the Operating Noise Impact Assessment is included as Attachment 3.

<u>Facility Manual</u>

Comment No. 6: In Section 2.4 Unauthorized Waste Program: please separate recycle facilities from disposal facilities.

Response No. 6: **Comment noted. The recycling outlets have been removed from Table 2-1 and have been incorporated into a new table; Table 2-2- Recycling Facilities.**

Comment No. 7: In Section 3.3 Process Flow: please explain how the tipping floor will be cleaned each day.

Response No. 7: **The tipping floor will be emptied of material with the facility equipment – using a skid steer to pick up any residual waste inaccessible by the loader. If the size or consistency of residual material on the floor requires hand cleaning, the tipping floor will be swept up as needed. Section 3.3. Process Flow has been reviewed and revised as necessary.**

Comment No. 8: In Section 3.13.7 Financial Assurance: please clarify that financial assurance will be updated in accordance with 360.22.

Response No. 8: **The referenced regulation, 362-3.5(i), states that financial assurance must be maintained in accordance with 360.22, so it is, therefore, included by reference. To help clarify, the language has been updated to include both sections of the regulation.**

Comment No. 9: Please revise the Spill Response Equipment and Procedures in Section 5.3 Emergency Equipment to be consistent with DEC regulations with reporting of spills.

Response No. 9: **Comment noted. Section 5.3 Emergency Equipment has been reviewed and revised to be consistent with DEC regulations.**

Comment No. 10: Appendix D Closure Cost Estimate should include a closure cost estimate for a worst-case scenario. This scenario would be disposal of 1,498 tons of MSW (one day of permitted storage and one day of maximum throughput). Please revise the estimate accordingly and include transportation costs of the waste.

Response No. 10: **The worst-case scenario disposal of 1,498 tons would result in a material disposal cost of approximately $107,856. A revised closure cost estimate has been included in the revised Facility Manual included as Attachment 2.**

<u>Public Participation Plan</u>

Comment No. 11: The Project Overview states that there will be no change to the 165 permitted truck trips per day. Please explain where this figure comes from.

Response No. 11: **The permitted truck trips referenced were established in the typical facility waste vehicle traffic profile completed in support of the 2005 facility permit modification. These were included in the responses to the notice of incomplete application prepared by Earth Tech Northeast, Inc. dated October 2005. The analysis estimated 162 inbound truck trips and 31 outbound truck trips per day. The language in the Project Overview has been updated to clarify these numbers and future submissions to the Department will reflect this change.**

Environmental Assessment Form

Comment No. 12: On page 5, section D.2.d indicates there will be approximately 50 gallons/day of total anticipated liquid waste generation, including sanitary wastewater and MSW leachate which will go to the Albany County Sewer District. Please provide documentation that this facility is willing and able to accept this waste.

Response No. 12: **After touring the facility on July 13, 2020 the Albany County Water Purification District deemed that no permit will be required for the proposed discharge associated with installing additional floor drains. Final approval will be granted after a walkthrough and inspection of the drain and grating once installed. The approval letter from the Albany County Water Purification District is included as Attachment 4.**

Comment No. 13: Section D.2.o indicates the proposed action has the potential to produce odors for more than one hour per day and that 'potential odors from operations will be mitigated through operational controls. New high-speed doors are proposed so the transfer of waste will occur within the building and an odor neutralization system will be installed to be used if needed to control odors. The NYSDEC has significant concerns related to odor not only at the facility itself but mobile odors as a result of transport to and from the facility.

- Please provide more information containing wind rose data at the proposed MSW transfer station itself, using an 800 ft setback from property lines;
- Please provide more information containing wind rose data at the South Port Road entrance, the Church Street entrance and at South Pearl St/I-787 underpass. The South Pearl St/I-787 location should include a large enough radius to include all the Ezra Prentice homes and Nutgrove Garden Apartments. These locations were chosen to represent areas with the potential of having trucks lined up during high traffic times.
- Provide more information on the 'odor neutralization system' referenced within the EAF.

Response No. 13:

a. Wind rose data from the Albany International Airport was obtained from the Iowa State University Iowa Environmental Mesonet. The data shows a visual representation of wind speed and direction as a percentage of the annual total. This wind rose was placed onto the transfer station vicinity map at the Ezra Prentice homes and Nutgrove Garden Apartments (potential receptors). By drawing a line between each potential receptor location and the source (the transfer station property line closest to these subject properties) and noting where the line intersects the wind rose, the percentage of the year during which the wind blows at an angle directly between the points can be established. Figure 1, attached to this document illustrates this.

Based on Figure 1, the wind blows in a direct line between the transfer station property and Ezra Prentice Homes approximately 2% of the year and between the transfer station property and Nutgrove Garden Apartments approximately 3% of the year.

b. The exercise described above was also used to assess the percent wind direction between the intersections identified by the NYSDEC and the potential receptors. Based on this assessment, the following was determined:

- **From the South Port Road entrance, wind is blowing toward the Ezra Prentice homes approximately 3% of the time and toward the Nutgrove Garden Apartments approximately 7% of the time.**
- **From the Church Street entrance, wind is blowing toward the Ezra Prentice homes approximately 1% of the time and toward the Nutgrove Garden Apartments approximately 1% of the time.**
- **From the South Pearl St/I-787 location, wind is blowing toward the Ezra Prentice homes approximately 3% of the time and toward the Nutgrove Garden Apartments approximately 1% of the time.**

It should be noted that at maximum proposed operating conditions, the mobile traffic associated with the transfer station is expected to result in, at most, a 3% increase in total traffic accessing the port over existing conditions and a decrease of 3% over currently permitted conditions. These intersections are designed to accept this level of traffic and the queuing of trucks at these intersections is not expected. In addition, there is no current indication of trucks queuing at these intersections during the peak hour, where they proceed directly to and from the transfer station. With a maximum increase of 7 trucks per hour, it is not anticipated that the level of service at these intersections would be negatively impacted.

c. The facility will be equipped with Hörmann-Flexon Speed-Master 4600L High Performance Doors or a similar model. These high-speed doors have an opening and closing speed of 24 IPS, and therefore, limit the escape of odors from the facility when trucks enter and exit the building. These have been used successfully at other Waste Management transfer station facilities with much success.

If deemed necessary, a Bio Triad Vapor Phase system (or similar) will be installed for odor neutralization. The system does not require use of water, so it can be operated year round. This system is comprised of three primary components: an odor neutralizer that is designed to treat fugitive odor emissions in the vapor phase, an odor control unit that is designed to evaporate the odor neutralizer, and a vapor distribution system that delivers the odor neutralizing vapor into the fugitive emissions. The system would likely be installed at the overhead doors of the facility to

neutralize any odors during door opening/closing cycles. This system has been installed at multiple Waste Management Facilities with great success.

The wind roses illustrate there is a very low probability the wind will blow in the direction of the areas of concern for the Department — further supporting that the potential for odors should not be an issue for this facility. WM has taken a proactive approach as an applicant with the addition of high-speed doors as an engineering control to avoid odor impacts and thus eliminate any concern of potential odors.

Comment No. 14: On page 7 of the EAF, please revise the hours of operation to be 6:00 AM to 11:00 PM, as stated in the Engineering Report.

Response No. 14: **Comment noted. The EAF has been reviewed and revised as necessary. A revised EAF is included as Attachment 5.**

Traffic

Comment No. 15: Please provide an average number of incoming trucks per day, daily TPD acceptance and average number of outgoing trucks over the past 12 months. The NYSDEC is requesting this data to compare what was accepted on a daily basis vs the amount of trucks required to reach that number; this information is required to determine the increased number of trucks the public may anticipate observing should the maximum daily throughput be reached. Please provide information in a chart form, broken down by truck type (garbage truck, 18-wheeler trailers, etc.), number of axels, and maximum volume capacity of truck per waste type.

Response No. 15: **This information has been provided in the attached "Traffic Analysis Report" Dated December 2020 and prepared by Barton & Loguidice, DPC. This report has been included as Attachment 6. Please note that at maximum proposed operating conditions the traffic associated with the transfer station is expected to result in a decrease of 3% over currently permitted conditions that were subject to prior State Environmental Quality Review Act review.**

Comment No. 16: Please provide information on what the anticipated inbound truck sizes will be for the proposed modification action. Please provide information in a chart form, broken down by truck type (garbage truck, 18-wheeler trailers, etc.), number of axels, and maximum volume capacity of truck.

Response No. 16: **This information has been provided in the attached "Traffic Analysis Report" Dated December 2020 and prepared by Barton & Loguidice, DPC. This report has been included as Attachment 6.**

Comment No. 17: As the application indicates, the proposed modification is not proposing any changes to the currently permitted throughput of 749 tons/day nor the current

amount of truck trips. Per the application, putrescible material will be removed from the facility within seven days (or within one business day of a container becoming full, whichever comes first); non-putrescible recyclables will be loaded into trailers and removed from the site within 180 days; unrecoverable recyclables may be stored for a maximum of 14 days before transfer; and, incidental putrescible waste or residue from recycling operations must be transferred off-site within seven days. As the proposed modification will require a quicker turnaround of removal from the facility compared to what is currently permitted, please describe how current truck traffic will remain the same as it appears additional trucks will be required to address the quicker turnaround required for putrescible material.

a. Please compare existing maximum truck trip traffic per day with proposed maximum truck trip traffic per day. Provide that information in chart form, broken down by truck type and by trucks hauling material in vs. hauling the material to the next facility.

b. In addition, please clarify where the filled trailers, for both non-putrescible recyclables and incidental putrescible waste, will be stored while they are filled, waiting to be transferred off site.

Response No. 17: **The turnaround of removal has almost no impact on the number outbound truck trips even if the waste density of putrescible and non-putrescible waste was the same. Regardless of storage capabilities, the average daily tonnage transported off site must equal the average daily tonnage received in order to maintain adequate capacity at the facility for daily incoming tonnage. Since putrescible waste has a greater density than non-putrescible waste, resulting in a greater payload in each outbound trailer this will reduce the number of outbound trucks under proposed conditions than under currently permitted conditions.**

a. This information has been provided in the attached "Traffic Analysis Report" Dated December 2020 and prepared by Barton & Loguidice, DPC.
b. If necessary, filled trailers will be staged along the southern fence line of the facility, as indicated on Figure 1 in the revised Facility Manual.

Comment No. 18: The application indicates 'deliveries of materials are accepted from 6:00am to 5:00pm Monday through Friday and 6:00am to 3:00pm on Saturday. Material processing may continue within the transfer structure until 11:00pm on weekdays.

a. Please provide the time when material processing may continue to on Saturday.

Response No. 18: **On Saturdays material processing may continue until 6:00 p.m. This has been clarified in Section 3.1 of the facility manual and Section 2.1 of the engineering report.**

General Comments

Comment No. 19: The application indicates the proposed project will have a reduction in greenhouse gases (GHG) as a result of the proposed projects for the following reasons: 1) utilizing WM's Port of Albany facility for MSW transfer will reduce travel distances for waste haulers as Albany's Rapp Road landfill is diverting loads; 2) by reducing trips through increased opportunities to consolidate loads at the facility; and 3) MSW transferred at this facility will primarily be disposed of at WM's sanitary landfill in Saratoga County, NY (45 miles away) compared to other commercial disposal facilities servicing the region which are 175 miles away. Tractor trailer haul distances and their subsequent GHG emissions are therefore reduced when utilizing a shorter haul. Taking the NYSDEC's traffic comments into account with respect to how the proposed project will remain at current traffic levels, please expand on GHG emissions.

Response No. 19: **All non-recyclable waste generated within the Capital Region must be transferred to a permitted facility for disposal. With limited capacity for disposal in the region, and limited options for transferring waste, local collection vehicles are forced to travel farther distances to locations where waste can be disposed of or transferred to a disposal facility. It is inefficient to transfer waste any distance by local collection vehicle, and the closer a transfer station or disposal facility is to the point of collection, the more efficient the transfer is. More efficient transfer to a disposal facility leads to a reduction in greenhouse gas generation. Reducing the hauling distance from 175 miles to 45 miles would decrease CO_2 emissions by approximately 74%, or 331.8 kg CO_2 per trip or 1,133,893 kg CO_2 per year. Based on the NYSDEC's "Establishing a Value of Carbon," the associated U.S. social cost saved by the hauling distance reduction is approximately $26.21/truck daily and $6,815.69/truck annually. Based on October 2020 fleet data, this would equate to a total of approximately $89,577 annually. By handling waste at a local transfer facility, WMNY can control the disposal location for that waste and, in turn, assure that it is transferred to a more localized facility.**

WM is committed to converting its fleet from diesel to compressed natural gas (CNG) and is predicting that approximately 70% of its active trucks will run on CNG by the end of 2020. For every hundred miles driven by a CNG truck, approximately 60 kg of CO_2 emissions would be eliminated, which is equivalent to planting just under three hardwood trees. Regardless of mileage, full conversion of the fleet servicing the facility would reduce CO_2 emissions by approximately 23 percent. If the hauling distance were reduced from 175 miles to 45 miles and the WM fleet were fully converted to CNG, approximately 358.5 kg CO_2 emissions per trip, or 1,225,153 kg CO_2 emissions per year, would be prevented. Based on the NYSDEC's "Establishing a Value of Carbon," the associated U.S. social cost saved by this scenario is approximately $28.32/truck daily and $7,364.24/truck annually. Based on

October 2020 fleet data, this would equate to a total of approximately $96,787 annually.

Comment No. 20: The NYS Office of Parks, Recreation and Historic Preservation (OPRHP) provided a no impact letter, dated May 12, 2017. As this letter is over two years old, please provide an updated letter from OPHRP.

Response No. 20: **We have requested and received a revised no impact letter from OPRHP, dated April 7, 2020. The findings of the OPRHP remain unchanged. The letter is included as Attachment 7 to this letter.**

Should you have any questions regarding this information, please do not hesitate to contact me at (315) 457-5200.

Sincerely,

BARTON & LOGUIDICE, D.P.C.

1.0 Introduction

This Engineering Report is submitted on behalf of Waste Management of New York, LLC (WMNY) to the New York State Department of Environmental Conservation (NYSDEC) as part of a package submitted for a modification to the existing permit to add the acceptance of putrescible municipal solid waste (MSW) to the list of the materials currently accepted. WMNY operates the Port of Albany transfer station in the City of Albany, Albany County, New York. This facility employs a full-time staff of trained and qualified personnel to carry out the operation.

This Engineering Report has been developed in accordance with the requirements set forth in 6 NYCRR Parts 360.16(c)(3) (Engineering Report) and 362-3.5 (Design and Operating Requirements). In accordance with 6 NYCRR Part 360.16(c)(4), this Engineering Report is accompanied by a Facility Manual, which is separately bound.

1.1 Existing Conditions

The facility is located at 100 Boat Street in the central portion of the Port of Albany, City of Albany, Albany County, New York. Figure 1 (Regional Overview Map) shows the general site location. Waste Management's Transfer Station and Hauling Division facilities are located on two (2) adjacent parcels, encompassing a total of approximately six (6) acres. The site layout is shown on Figure 2 – Site Plan and shows the transfer station located on the east side of the property.

The existing property is currently situated at 100 feet above mean sea level (MSL), which is located within the 100-year flood plain elevation of the nearby Hudson River according to Federal Emergency Management Agency (FEMA) floodplain maps. All MSW and C&D waste will be removed from the floor at the end of each operating day, which will minimize any possible impacts due to potential flooding of the facility.

The zoning designation of the Port of Albany Site and the surrounding properties is I-2 (general industrial district). Utilities and rights-of way are shown on the Regional Overview Map (Figure 1).

The site has historically operated as a transfer facility since the late 1980s and is currently permitted to receive, handle and process 749 tons per day (tpd) of dry commercial wastes, construction and demolition (C&D) debris, and source-separated recyclables. All processing of material delivered to the site by collection vehicles occurs inside the 19,659 sf transfer station building. The processing area consists of three tipping bays for receiving and processing of material, as shown on the Transfer Station Floor Plan (Figure 3).

1.2 Material Management Service Area

The material accepted at the Port of Albany Transfer Station currently consists primarily of dry commercial waste, C&D debris, and recyclables collected within the City of Albany and throughout eight (8) surrounding counties.

It is proposed that the facility will also accept MSW from residential or commercial entities within a similar service area with no change to the currently permitted limit of 749 (tpd).

1.3 Solid Waste Management Policy/Plans

Operation of the Port of Albany transfer station is consistent with New York State (NYS) material management policy. As available local landfill disposal capacity space becomes increasingly limited, the associated increase in tipping fees at these landfills for the disposal of MSW has imposed a significant economic burden on the hauling industry and the sectors they serve. The limited number of local sites approved by the NYSDEC for disposal of MSW via direct haul compels the hauling industry to transport material to approved transfer stations for consolidation and long haul transportation to landfills remote to the area. This has demonstrated an increase need for solid waste transfer facilities.

The Rapp Road Landfill, owned and operated by the City of Albany, and the Town of Colonie's Landfill have limited WMNY from delivering MSW to these facilities due to capacity constraints, requiring WMNY to drive long distances to dispose of solid waste material. Based on these facts, there is a demonstrated need for MSW transfer facilities. In response to these needs, WMNY proposes to accept MSW at the Port of Albany transfer facility to assist in the stated objectives. This facility will contribute towards the local material management plans by providing local disposal options.

The site currently collects and handles source-separated recyclables and will continue to do so. Providing this service in the area will allow for continued access to recycling outlets for residents and to maintain recycling rates in the area. Continued diversion is in-line with the State's Solid Waste Management Plan (SWMP).

The facility is located within the Capital Region Solid Waste Management Partnership planning unit, which has an approved Local Solid Waste Management Plan. Although this facility is not specifically identified as part of the continued solid waste management within the planning unit, the use of a transfer station to haul material to approved disposal/processing facilities located outside of the planning unit is consistent with the local planning unit's solid waste management plan objectives.

2.0 Engineering Analysis

2.1 Facility Operating Plan

The Port of Albany transfer station facility consists of a 19,659 square foot building, which includes the materials processing area, administrative offices and weigh scale. The site also includes paved access roads and parking areas. The materials processing area consists of three (3) tipping areas with a recessed transfer trailer load out pit in the center of the building structure. The tipping areas are separated for recyclables, C&D debris and solid waste transfer.

MSW, C&D debris, and recyclables, will be accepted at the facility from municipal, commercial, industrial, and residential sources. Only materials specifically approved by the NYSDEC will be accepted for handling. Procedures for screening loads, refusing unauthorized shipments, and managing unauthorized material which is unloaded on the tipping floor are addressed in Section 2.4 of the Facility Manual (bound separately).

As it is currently permitted, the transfer station will operate six days per week, Monday through Saturday. Deliveries of material are accepted from 6:00 a.m. to 5:00 p.m. Monday through Friday and 6:00 a.m. to 3:00 p.m. on Saturday. Material processing (tipping, sorting, loading, etc.) may continue within the transfer structure until 11:00 p.m. on weekdays and 6:00 p.m. on Saturdays. Attendants are on duty in the transfer station during all hours of operation Monday through Saturday, and in the office Monday through Friday.

All putrescible material will be loaded into trailers daily and removed from the site within seven calendar days of receipt or within one business day of a container becoming full, whichever comes first. All non-putrescible recyclables will be loaded into trailers and removed from the site within 180 days. Unrecoverable recyclables may be stored for a maximum of 14 days before transfer. Incidental putrescible waste or residue from recycling operations must be transferred off-site within seven days.

Haulers will transport collected materials in transfer trailers to one of the disposal facilities listed in Table 2-2 below. These facilities are primarily located in New York and each of the disposal facilities is authorized to handle the material or recyclables.

Since the facility is not limited to a finite capacity, the facility site life is not specified. Operations will continue for an indefinite period as long as the facility holds current operating permit. The site life of the transfer station building is expected to be approximately 50 years or longer subject to proper maintenance and repair.

2.2 Machinery and Equipment

The table below provides a description of the major types of mobile equipment that is used at the transfer station, as well as major items of fixed equipment used to support the operation of the facility. It should be noted that the types of equipment listed in Table 2-1 are typical, and the listed equipment may be replaced by equal equipment should maintenance be required, the equipment breaks down, etc.

Table 2 - 1 - Equipment List

Item (Qty)	Manufacturer	Model No.	Function
Mobile Equipment			
Wheel Loader (1)	CAT	938H	Pushing material, loading material, compaction
Skid Steer (1)	John Deere	JD 320	Pushing material, loading material, cleaning floor and pavement areas
Excavator (1)	CAT	323	Loading material, compaction
Yard Horse (2)	Capacity	TJ 6500 and TJ 700	Moving empty and loaded trailers around on site
Fixed Equipment			
Scale (1)	Mettler - Toledo	N/A	Truck weighing
Note: The equipment listed in this table may be replaced with equal equipment should the listed equipment require maintenance, the equipment breaks down, etc.			

2.3 Transfer Plan

The waste material is typically transported to the site by material collection vehicles and is unloaded by tipping into the designated MSW/C&D transfer tip/sort floor shown on Figure 3. Material tipped onto the tipping floor is loaded into trailers with the loader and excavator.

Waste material is loaded into transfer containers for transport offsite to an approved disposal facility. Trucks accessing the site for transport of waste material, enter the site via the main access point on Boat Street as shown on Figure 1. After these trailers enter the site, they proceed to the transfer trailer staging area. Empty trailers are maneuvered into the loading bay with on-site yard horse and when the transfer trailer is fully loaded, it will be tarped and staged prior to leaving the site. The outbound scale operator

documents the quantity of material in the truck, the trucking company's name and identification number, and other appropriate information. The volume of inbound and outbound trucks may vary based upon the daily material flow conditions. Each transfer trailer holds on average approximately 26.5 tons of MSW/C&D.

Recyclable material is typically transported to the site by material collection vehicles and is unloaded by tipping into (1) one of the (2) two designated tip/sort/storage areas shown on Figure 3. This material is loaded into transfer containers for transport offsite to an approved recycling facility. Trucks accessing the site for transport of material to recycling facilities enter the site via the main access point on Boat Street as shown on Figure 1. The outbound scale operator documents the quantity of material in the truck, the trucking company's name and identification number, and other appropriate information. Each transfer trailer holds on average approximately 15 tons of old corrugated cardboard and 10 tons of single stream recyclable material. Each outbound roll off holds on average approximately 3 tons of metal material and currently is taken next door to the neighboring metal recyclers within the limits of the Port.

All materials will be disposed of at a permitted disposal or recycling facility, primarily those listed in Tables 2-2 and 2-3, below. All receiving facilities for solid waste and C&D will be located within New York State.

Table 2 - 2 - Disposal Facilities

Name of Facility	Address	Type of Material
Green Ridge RDF	424 Peters Road Gansevoort, New York 12831	MSW, C&D
High Acres Landfill	425 Perinton Parkway Fairport, New York 14450	MSW, C&D
Chaffee Landfill	10860 Olean Rd Chaffee, New York 14030	MSW, C&D
Wheelabrator Hudson Falls LLC	61 River St Hudson Falls, New York 12839	MSW
MSW = Putrescible Material C&D = C&D Debris		

Table 2 - 3 - Recycling Facilities

Name of Facility	Address	Type of Material
Ben Weitsman of Albany	300 Smith Boulevard Albany, New York 12202	Metal
Sierra Processing	865 SO. Pearl St Albany, New York 12207	OCC, SSR

ReCommunity Recycling	508 Fishkill Avenue Beacon, New York 12508	OCC, SSR
WM Recycle America	4550 Steelway Boulevard South Liverpool, New York 13090	OCC, SSR
WM Recycle America	Springfield MRF, 84 Bernie Ave Springfield, MA	OCC, SSR
WM Recycle America	Automated Material Handling Tremont Street Springfield, MA	OCC, SSR
SSR = Single Stream Recyclables OCC = Old Corrugated Cardboard		

2.4 Unloading and Loading Areas

The transfer station is a steel frame building designed over a concrete floor slab. There are four overhead doors on the east side of the transfer station building, with two providing access to the MSW/C&D tipping floor, one that provides access to the transfer trailer load out pit and one that provides access to the recyclables/tip/sort/storage floor. In addition, there are two overhead doors on the north and south side of the building providing access to the transfer load out pit and one overhead door on the south side of the building that provide access to the recyclable's tip/sort floor. Collection vehicles back into one of four bays in the transfer station to unload onto the tip floor. Each truck will pass through high-speed overhead doors, which will open to gain entrance and then close once the truck is within the building. Once unloading is completed, each truck will pull forward and exit the facility through high-speed overhead doors, which will once again open and close, with the truck then proceeding over to the scale. Concrete push walls are constructed across the width of the transfer station within the loadout areas as shown on (Figure 3). The push wall assists the mobile equipment to transfer waste deposited on the tipping floor into the containers staged in the MSW/C&D loadout area.

Waste and recyclable materials are containerized and stored separately in the eastern portion of the building. This area is of adequate size to accommodate sufficient open space for all necessary maneuvering and loading.

The floor of the building is sloped toward a floor drain that is used to collect any incidental liquids that may be associated with the tipped loads. The sump is located between the Recyclables tipping floor and the MSW loadout area and is pumped to the sewer for disposal, as needed.

Facility personnel observe incoming loads of material to accurately document the type and amount of incoming material. A truck scale is available on the site to obtain load weights for incoming waste and recyclables.

The facility is equipped with two wall mounted ventilation fans for use if needed to remove built up exhaust from operating equipment.

National Fire Protection Association (NFPA 13) guidelines and New York State Fire Code indicate that the transfer station structure requires an automatic sprinkler system for fire suppression, as the building use is storage (S-1) and the footprint is 19,659 square feet.

2.5 Facility Drainage and Water Supply System

Facility features and operational procedures are designed to prevent introduction of material into the surface or groundwaters of the State. Material is unloaded, processed, and loaded onto trailers within a building designed to prevent escape of solid waste or MSW leachate into the environment. In addition, tarps are placed on the trailers before they leave the enclosed areas to prevent the escape of the material from the trailers and to minimize potential odors. Receiving and processing areas are swept or vacuumed daily after operations.

The facility holds a General Industrial State Pollution Discharge Elimination System (SPDES) permit for discharge of stormwater from the site. In order to maintain compliance with this permit, the facility performs compliance inspections and monitoring.

The water supply for the facility is provided by the Port of Albany.

2.6 On-Site Roads

The transfer station access road layout was planned to accommodate the expected traffic flow, including peak flow, in a safe and efficient manner. The relatively low traffic levels at the site do not typically require the queuing of trucks at the site entrance. To discourage the queuing of trucks outside of the facility entrance prior to the facility opening, signs will be posted notifying drivers that queuing is not allowed. Violators will be subject to a temporary or permanent ban from use of the facility, if necessary. Should queuing of trucks be required during operating hours, a designated area within the site boundaries labeled Hauling Facility Parking shown on Figure 2 provides sufficient queuing capacity.

Incoming collection vehicles will primarily enter the Port of Albany via the Church Street entrance, turn right onto Boat Street then left into the transfer station entrance. All transfer trailers exiting the site will turn right onto Boat Street, then left onto Church Street and proceed to interstate I-787. In the event that collection vehicles are accessing the Port of Albany from local collection routes to the west, these will enter the Port of Albany via the South Port Road entrance, proceed on Smith Blvd and turn left onto Boat Street to access the facility. Typical travel routes are depicted on Figure 1.

Vehicular ingress and egress to the site is via Boat Street. Incoming vehicles enter from either direction off of Boat Street. Drivers will stop at the weigh scale and be directed by administrative staff where to proceed to unload incoming materials. Trucks return across the scales to determine the net weight of the deposited load. Outgoing vehicles exit via the same route as incoming vehicles.

On-site access roads are pavement and are designed with sufficient thickness to withstand the expected traffic volumes and loading for transfer station operations. Access roads will be maintained in a safe and passable condition for loaded transfer vehicles in all weather conditions. Road conditions are monitored by the facility manager and repaired as necessary by on-site staff. Staff also performs snow removal and de-icing of roads using sand and/or salt as needed.

3.0 Noise Assessment

It is not necessary to perform a Part 360 Noise Assessment as part of this permit modification as there will be no change in the permitted tons per day received at the facility or quantity or type of equipment operating. The site is located in a highly industrial area and the background noise from surrounding operations is expected to be above the noise generated by the transfer station operation.

Associate
NYSPE License No. 083501

1.0 Introduction

This Facility Manual is submitted on behalf of Waste Management of New York, LLC (WMNY) to the New York State Department of Environmental Conservation (NYSDEC) to support the modification of the existing 6 NYCRR Part 360 permit for the WMNY Transfer Station in Albany, New York to include the acceptance of putrescible municipal solid waste (MSW) to the list of the materials currently accepted. This plan generally follows the outline of the operational requirements of 6 NYCRR Part 360, including 360.16(c)(4) (Facility Manual), 360.19 (Operating Requirements), 361-1 (Recyclables Handling and Recovery Facilities, and 362-3 (Transfer Facilities).

The buildings, open parking areas, and processing areas at the Port of Albany Transfer Station (herein referred to as the facility) are permitted by NYSDEC under Permit 4-0101-00185/00002.

This Facility Manual replaces all other previous O&M Manuals for the site. All previously approved modifications to the facility and other pertinent facts for the site are included in the body of this report.

2.0 Waste Control Plan

In accordance with 6 NYCRR Part 360.16(c)(4)(i), the following details the facility's waste control plan. The perimeter of the Port of Albany facility is secured against unauthorized vehicle entry with a metal fence and sliding gates, as shown on the Site Plan on Figure 1 of the Engineering Report. Access to the facility is monitored by facility personnel and limited through lockable gates at the truck entrance/exit. The following sections detail the facility's service area, waste acceptance requirements, waste destination facilities, unauthorized waste program, and recyclables management.

2.1 Facility Service Area

Material received at the facility is collected by private and public haulers from within Albany County and surrounding counties. These additional counties include, but are not limited to Schoharie, Columbia, Fulton, Greene, Montgomery, Rensselaer, Saratoga, Schenectady and Washington Counties in New York.

2.2 Waste Acceptance

Material is accepted at the facility only during operating hours when attendants are on duty. Signs are posted at the main entrance stating the hours of operation, types of material accepted, and those not accepted, as discussed below. Loads are accepted from commercial haulers and contractors, as well as private residents with large loads, as approved by facility personnel. The facility personnel are equipped with cellular phones for communication among the offices, equipment operators, and the loading areas. As noted in the Emergency Response Plan (Section 5.0), telephone numbers for police and fire departments and emergency responders will be posted prominently by all telephones and in the office.

Visitors to the Port of Albany facility proceed to the main office located at the existing facility entrance. Visitors are escorted through the facility by WMNY personnel.

A sign is conspicuously located at the facility entrance specifying:

- **Waste Management of New York, LLC**
- **Port of Albany Transfer Station**
- **Hours of operation**: Monday through Friday: 6 a.m. to 5 p.m.
- **Saturday**: 6 a.m. to 3 p.m.
- Sunday: Closed

- **Waste Accepted**

  Residential and Commercial Waste; Source Separated/Single Stream Recyclables (Glass, Metals, Plastics Corrugated Cardboard, and Paper); Construction and Demolition Debris, Municipal Solid Waste

- **Waste Not Accepted**

  Asbestos, Hazardous Waste, Medical Waste, Radioactive Waste, Liquid Waste, Petroleum-contaminated Waste

- **NYSDEC Permit #4-0101-00185/00002**

  The facility is permitted to accept 749 tpd of waste material and recyclables.

For the purposes of this report, the term "material" refers to all materials accepted at the facility as listed above, including recyclables.

An additional sign will be installed at the facility entrance indicating that vehicles are prohibited from queuing off-site outside of the hours of operation. This sign will be enforced by rejecting loads from vehicles that queue off-site.

2.3 Waste Destination Facilities

All material will be disposed of at a permitted disposal facility, primarily those listed below (360.16(c)(4)(i)(c)). All receiving facilities for solid waste and C&D will be located within New York State.

Table 2- 1 - Disposal Facilities

Name of Facility	Address	Type of Material
Green Ridge RDF	424 Peters Road Gansevoort, New York 12831	MSW, C&D
High Acres Landfill	425 Perinton Parkway Fairport, New York 14450	MSW, C&D
Chaffee Landfill	10860 Olean Road Chaffee, New York 14030	MSW, C&D
Mill Seat Landfill	303 Brew Road Bergen, New York 14416	MSW, C&D
Wheelabrator Hudson Falls LLC	61 River Street Hudson Falls, New York 12839	MSW
MSW = Putrescible Material C&D = C&D Debris		

Table 2- 2 - Recycling Facilities

Name of Facility	Address	Type of Material
Ben Weitsman of Albany	300 Smith Boulevard Albany, New York 12202	Metal
Sierra Processing	865 South Pearl Street Albany, New York 12207	OCC, SSR
WM Ft. Edward	12 Wing Street Fort Edward, New York 12828	OCC, SSR

WM Recycle America	Springfield MRF 84 Bernie Avenue Springfield, MA	OCC, SSR
WM Recycle America	Automated Material Handling Tremont Street Springfield, MA	OCC, SSR
SSR = Single Stream Recyclables OCC = Old Corrugated Cardboard		

2.4 Unauthorized Waste Program

Only material which this facility is permitted to handle is accepted. Generators and transporters of material received at this facility are informed in writing of the acceptable material types by WMNY. Pursuant to ***360.19(c)(1)(i)***, signs are posted at the entrance

to the transfer station stating, among other things, the types of material accepted and the types not accepted. The signs are posted at the entrances and exits to the facility and again at the inbound scale house. Loads not permitted for handling at this facility will be rejected and turned away. All facility staff will be trained to identify acceptable material and instructed to report any unacceptable material to the manager on duty.

In regards to WMNY Collection vehicles, WMNY has a program in place to encourage and monitor customer compliance with material acceptance and sorting guidelines. All new WMNY collection customers are given paperwork informing them of acceptable and unacceptable materials to be placed at the curb, and which materials should be separated for recycling. This same information is periodically mailed to existing customers to remind them of the guidelines. Whenever changes in the accepted waste or recyclables streams are made (with NYSDEC approval); customers will receive additional mailing to inform them of these changes.

WMNY haulers are also directed to use the WMNY procedures to enforce compliance with these guidelines. Generally, these programs outline protocols for identifying unauthorized wastes or other waste collection issues prior to collecting the material.

As collection vehicles enter the facility, information such as vehicle type, company, and source of material is recorded either electronically, by visual identification of regular vehicles, or by interviewing the drivers. Visual evidence of unauthorized material will be cause for rejecting a load. Employees are trained to identify all types of material. This will include, but will not be limited to, hazardous and regulated medical materials, asbestos, and petroleum-contaminated soil.

When a collection vehicle reaches the tipping floor, it is unloaded in the presence of facility workers who will observe the contents of the load for unauthorized materials. If such materials are identified, the matter will be addressed with the responsible driver and company. All incidents of unauthorized material being inadvertently deposited at the Port of Albany Facility will be reported to NYSDEC in the annual report, as required by NYS regulations ***(360.19(c)(4)(i))***. The Emergency Coordinator is responsible for alerting the appropriate authorities if the material is hazardous or regulated medical material, except for incidental or “de minimis” quantities. A “de minimis” quantity of unauthorized material means that it is non-radioactive and incidental to the load. Examples of “de minimis” quantities would include small paint cans and aerosol cans.

The material will be further examined for unauthorized materials as it is pushed into the processing/loading areas. In the event unauthorized materials are delivered to the facility, such material will be adequately segregated and secured in a designated area within one hour of the discovery.

The Unauthorized Material Storage Area (UWSA) is located in a designated area in the southwest corner of the transfer station building. Separated material may be segregated from the rest of the tipping floor using temporary concrete barriers or a 2-yd roll-off container as needed.

Common items, such as automobile batteries and tires, will be removed regularly as needed. Dangerous unauthorized materials, such as hazardous and regulated medical material, asbestos, and petroleum-contaminated soil will be removed from the facility within 24 hours after the discovery or as soon as possible. WMNY will notify the NYSDEC in advance if the dangerous unauthorized materials cannot be removed within 24 hours. Removal will be performed by a material transporter permitted to handle such material pursuant to 6 NYCRR Part 364.

A logbook will be maintained by the Emergency Coordinator to record events, date, time, description, actions/repairs, etc. All incidents of receipt of unauthorized material will be recorded in the respective daily log with such information included in the subsequent annual report to the Department.

Unauthorized material encountered at the facility will be handled in accordance with WMNY's Unauthorized Waste Procedures (see Appendix A). These procedures are intended to meet the requirements set forth in Title 6 NYCRR Paragraph 360.19(c). Acceptable materials tipped within the processing building will include MSW, C&D debris, OCC, and source separated single stream recyclables.

2.5 Recyclables Management

Recyclables managed at the facility are primarily source-separated single stream recyclables and pre-sorted OCC. Recyclable material is managed separately from the MSW and C&D waste streams to avoid potential contamination. Recovered recyclables include single stream and corrugated pre-sorted recyclables. Additional detail on recyclables handling can be found in Section 3.11.

3.0 Operations and Maintenance Plan

In accordance with 6 NYCRR Part 360.16(c)(4)(ii), the following describes the operations and maintenance plan for the Port of Albany Transfer Station. WMNY, as the facility operator, engages in a program of monitoring employees and customers for compliance with the regulations pertaining to the facility. The Facility Manager monitors and inspects the facility for malfunctions, deteriorations, and possible environmental discharges. Areas to be inspected include, but will not be limited to: material handling areas; mobile equipment; air ventilation systems; unauthorized material control program and containers; scales and recordkeeping; dust, vector and odor control; site drainage; access roads; structural components; readiness of firefighting equipment; and the integrity of the security system, including fences and gates. Problems will be promptly addressed and remedial action will be taken when necessary. A logbook will be maintained for inspections, identifying the specific equipment and structures inspected, and recording observations as well as the date and nature of any remedial actions or repairs implemented.

3.1 Facility Operation

The transfer station operates Monday through Friday, from 6 a.m. to 5 p.m. and 6:00 a.m. to 3:00 p.m. on Saturday. Loading of trailers is performed during regular operating hours but can also be performed inside the transfer building as late as 11 p.m. Monday through Friday and 6 p.m. Saturdays. Attendants are on duty during all hours of operation. The manager is available during normal business hours and whenever other employees are working. The facility entrance gate will be closed when the facility is not open for operation.

Trucks access the facility via Boat Street where facility personnel document the type of truck, type of material being delivered and material quantity. The site truck scale is used to record the weight of all inbound and outbound materials. If any evidence of unauthorized material is detected (including asbestos), facility personnel will follow WMNY's unauthorized waste plan included in Appendix A.

Dust in outdoor operations areas may occasionally be generated by sand used for deicing roadways, by windblown deposition from other areas of the development, and by tracking of vehicles through the facility. Paved areas are swept as needed, with the use of water spray during dry periods as necessary to facilitate dust suppression and removal.

Inside the facility, dust may be generated by tracking of road dirt by collection vehicles, and the tipping, processing, and loading of materials. The sweeper and hoses used for floor wash down will also be available for dust control operations.

3.2 Storage and Processing Areas

MSW, C&D, and source-separated single stream recyclables are processed in the existing transfer station building. In accordance with 6 NYCRR Part 362-3.5(f), the tipping floor must be cleared of MSW and C&D at the end of each working day. Containerized putrescible waste must be removed by the end of the next business day after a transfer container becomes full or within seven calendar days of receipt, whichever comes first.

Non-putrescible recyclables for marketing may be stored for a maximum of 180 days. Unrecoverable recyclables must be removed within 14 calendar days. Incidental putrescible waste or residues may be stored for a maximum of seven calendar days following receipt.

3.3 Process Flow

Authorized collection vehicles proceed to one of the tipping bays and enter the processing building through a high speed overhead door, which is closed after entry. Trucks are directed to back into one of the bay doors depending on which type of material they contain (see Figure 2). Trucks tip their load and then exit the building through the same door they entered through, as they proceed to the facility exit. Material is pushed from the tipping floor to the processing/loading area using a wheel loader and/or grapple. The equipment operators visually inspect the loads for any unauthorized waste. Large unidentified, suspicious, or leaking containers are removed using mobile equipment and managed as discussed below.

The wheel loader may be used to pre-crush or compact the material to improve the density for shipment. This process involves the wheel loader driving over material to crush it and reduce voids contained in the material. The process occurs on the tipping floor. The pre-crushing of material serves to reduce the size of bulky material and increase the density of the material. Pre-crushing of the material is not always necessary, and, as such, this step is not always included in the process.

For open-top loading, the wheel loader and/or grapple lifts the material into open-top trailers. The grapple uses the arm and grapple to compact the material into the trailer. Once the trailer is fully loaded, it proceeds to the tarping rack to be tarped. After the cover is pulled over the top of the trailer, the cover can be properly fastened, to prevent it from coming loose or coming off during transit. The trailer is then weighed on the scale prior to transport.

The tipping floor is separated into areas for C&D and MSW handling, and recyclables handling as indicated on Figure 2. A separate handling area for clean pre-sorted recyclables is located in the designated area adjacent to the C&D and MSW handling area. Each handling area will be exclusively dedicated to handling its designated material stream so as to prevent contamination of the recyclables stream.

As noted above, the facility accepts material 6 days per week. The facility can also operate equipment within the transfer building until 11 p.m. on week days in order to perform loading and cleanup activities. At the end of every operating day, the tipping floor will be inspected and cleaned of all material and debris. A skid steer will be used to pick up all material and place it in its designated areas. If the size or consistency of residual material on the floor require they will be swept up or washed down as needed.

3.4 Equipment

Adequate equipment will be maintained at the facility at all times for proper functioning of the transfer station operations. A list of equipment and machinery to be utilized is provided below. Mobile equipment is diesel-powered. Equipment fueling will take place as needed from the on-site diesel fuel storage tank on the paved area adjacent to the tank. Fueling of equipment may also occur on the tipping floors, in the maintenance bay, or in exterior paved areas using a fuel truck provided by contract with an outside vendor. A mechanic will be on duty during operating hours to provide on-site maintenance of mobile and stationary equipment. All equipment will be maintained in good working order, and the facility will be operated in accordance with the terms of the permit. Spare equipment from the other WMNY facilities or local equipment companies could be brought to the facility, if necessary.

West of the designated transfer station area there is a maintenance area used for the maintenance of equipment as shown on the site plan.

The table below provides a description of the major types of mobile equipment that is used at the transfer station, as well as major items of fixed equipment used to support the operation of the facility. It should be noted that the types of equipment listed in Table 3-1 are typical, and the listed equipment may be replaced by equal equipment should maintenance be required, the equipment breaks down, etc.

Table 3- 1 - Equipment List

Item (Qty)	Manufacturer	Model No.	Function
Mobile Equipment			
Wheel Loader (1)	CAT	938H	Pushing material, loading material, compaction
Skid Steer (1)	John Deere	JD 320	Pushing material, loading material cleaning floor and
Excavator (1)	CAT	323	Loading material, compaction
Yard Horse (2)	Capacity	TJ 6500 and TJ 700	Moving empty and loaded trailers around on site
Fixed Equipment			
Scale (1)	Mettler - Toledo	N/A	Truck weighing
Note: The equipment listed in this table may be replaced with equal equipment should the listed equipment require maintenance, the equipment breaks down, etc.			

3.5 Noise

The facility is designed to minimize sound resulting from the facility's operations that could exceed the allowable levels at or beyond the property line. The majority of noise generating operations, such as the operation of heavy mobile and processing equipment, is designed to take place within the building. None of these activities generate excessive noise. Any noise produced from the facility operations is reduced significantly either by the walls of the transfer building or the buffer between the operations and surrounding properties. Historically, noise levels have not been an issue at the facility.

All equipment owned by WMNY of New York, LLC are regularly maintained and serviced. The mufflers for internal combustion-powered equipment are maintained and serviced as needed so the original noise control features of the equipment are not degraded. The facility is therefore capable of complying with Part 360.19(j).

3.6 Odor

Odor control and minimization at the facility will be accomplished by both design and operational features. The facility will be equipped with high speed overhead doors to limit the escape of odors from the facility when trucks enter and exit the building. All waste delivery and loading procedures will take place within the building enclosure.

Operationally, steps will be taken to eliminate the generation of odors; all putrescible waste will be removed from the floor of the facility daily and loaded containers will be removed from the site within 24 hours of filling. Any specific loads of waste found to be overly odorous will be rejected from the facility before tipping and repeat offenders will be restricted from use of the site. Material controlled by WMNY collection operations will be flagged as odorous at the source and routed for alternate disposal. As described further in section 3.14.2, if prevention measures are not effective, the use of odor mitigation measures such as granules and sprays will be used, as needed.

3.7 Site Drainage

Facility features and operational procedures are designed to prevent introduction of material into the surface or groundwaters of the State. Material is unloaded, processed, and loaded onto trailers within a building designed to prevent escape of refuse or water into the environment. In addition, tarps are placed on the trailers before they leave the enclosed areas to avoid escape of the material from the trailers (as well as to contain odors). Receiving and processing areas are swept regularly and properly drained such that runoff generated from the interior of the building is collected for discharge to the sewer line.

A metal fence is present along the boundary of the property. Although rare, this physical boundary assists in the control of blowing litter, as well as providing security against unauthorized vehicle entrance. Exterior paved areas are patrolled and swept as necessary to remove accumulated litter or other refuse. As discussed in the Emergency Response Plan (Section 5.0), means will be available to handle accidental spills of refuse or unauthorized liquid material.

3.8 Monitoring, Maintenance, and Inspection Procedures

All processing activities take place within an enclosed building, elevated and isolated from the ground surface by a concrete slab. All concrete surfaces are maintained in good condition, and sacrificial thicknesses replaced when appropriate. As a result, there is no need for routine monitoring of groundwater or soil at the facility.

3.9 Interruptions in Operations

In the event that a mechanical problem, fire, or other unforeseen circumstance requires an unscheduled shutdown, all material which is on-site will be processed and loaded for transport, if possible. Incoming material will be rerouted to other WMNY facility or permitted third party locations. If necessary, material already delivered may be

reloaded into containers on trucks and carted to one of these alternate WMNY or third party transfer stations, within 24 hours of receipt.

Emergency Coordinators will organize personnel to secure the material and shutdown all equipment, unless dangerous conditions prohibit such action, and will advise emergency responders, as appropriate. Recommended spare parts for the mobile and mechanical equipment will be kept available to facilitate repairs and bring the facility back on line in the event of mechanical difficulties. An Emergency Response Plan (Section 5.0), outlines the appropriate procedures to be followed during unscheduled shutdowns caused by fire or other non-equipment related emergency.

3.10 Schedule of Operations

Initiation of daily processing activities is preceded by an inspection of all mechanical equipment. Equipment operators will engage the machinery and establish that it is functioning properly. The facility's mechanics will perform routine equipment and facility maintenance throughout the workweek.

At the conclusion of daily operations, the offices and maintenance building and all doors and gates will be closed and locked.

3.11 Equipment Calibration and Schedule

The only equipment requiring calibration is the weigh scale near the site's entrance. Weigh scale calibration and maintenance will follow the procedures and schedule as recommended by the manufacturer to ensure accurate inbound and outbound material tracking.

3.12 Traffic

Transfer station access and service road layout has been planned to accommodate the expected traffic flow, including peak flow, in a safe and efficient manner. The relatively low traffic levels at the site do not typically require vehicles to queue at the entrance to the site. Since approximately 15-20 vehicles can queue within the facility property and approximately 30 vehicles can be processed an hour, the expected peak volume can be managed safely and efficiently.

3.13 Part 361-1 Operating Requirements (Recyclables Handling and Recovery Facilities)

3.13.1 Material Accepted

Source-separated OCC and non-putrescible single stream recyclables will be accepted at the Port of Albany Transfer Station. Recyclables will be handled in the same manner as MSW and C&D material, which will be kept completely separate from these materials during acceptance, processing, storage, and transport. All recyclables transfer activities will be performed inside the transfer structure. Materials containing refrigerants (refrigerators, air conditioners, etc.) are not accepted at this facility and will be handled as unauthorized waste if discovered. All procedures outlined in this Facility Manual apply to all materials accepted at the facility, including recyclables. Under no other circumstances will recyclable materials be commingled with MSW or C&D waste materials or vice versa.

3.13.1.1 Pre-Sorted Recyclables Processing

In addition to single stream recyclables, Port of Albany Transfer Station also accepts pre-sorted recyclables from commercial and industrial sources.

Presorted recyclables are processed in designated areas. The pre-sorted recyclables processing area is separated from the other transfer station activities by a concrete block wall. This separate area prevents moisture and contamination from other waste as this is non-putrescible material, no vector, odor, or leachate issues are anticipated. Loading of pre-sorted recyclables is by grapple and/or wheel loader directly into open top trailers. Material is loose and not baled.

3.13.2 Material Storage

The capacity of the designated area is sufficient to accommodate the anticipated daily recyclables acceptance, and empty trailers or roll off containers are always available at the site. In the rare event that a transfer trailer is unavailable to provide transfer services, a trailer or roll off container would be staged to accommodate additional material quantities for storage as necessary.

Residues and processed recyclables are stored separately to maintain marketability of recyclables. Unprocessed and processed recyclables intended for recovery may be stored a maximum of 180 calendar days unless otherwise

approved by the department. Unprocessed non-putrescible recyclables not intended for recovery can be stored for a maximum of 14 calendar days. Incidental putrescible waste or residue can be stored for a maximum of seven calendar days following receipt or generation.

3.13.3 Unauthorized Material

Unauthorized material will be monitored for and handled in accordance with the site's Unauthorized Waste Program (Section 2.4). Recyclables containing refrigerants will not be accepted at the site and will be treated as unauthorized waste.

3.13.4 Recordkeeping and Reporting

In order to complete the recyclables handling and recovery facility annual report required by the Part 360 permit, all material received at the site, and transported from the site must be quantified and recorded by material type. All recyclables delivered to the site will be weighed in the collection vehicle with the on-site truck scale and its weight recorded. Transfer vehicles hauling recyclables from the handling facility will be documented using their recorded weight at the destination facility.

3.14 Part 362-3 Operating Requirements (Transfer Facilities)

3.14.1 RHRF

Pursuant to Part 362-3.5(a), Port of Albany Transfer Station is authorized as a recyclables handling and recovery facility under 6 NYCRR Part 361-1 in order to accept source-separated and single stream recyclables. See Section 3.11 for more detail.

3.14.2 Transfer Operations

All material received at the facility will be tipped, processed, and loaded within the enclosed/covered areas of the facility. In addition, tarping of the trailers will take place inside the boundaries of the facility. Consequently, minimal dust and blowing litter will result. As discussed in the Emergency Response Plan (Section 5.0), means will be available to handle accidental spills of refuse or unauthorized liquid material on access road. Perimeter fences serve to confine blowing litter which may escape from vehicles or the enclosed facility. Exterior paved areas are patrolled and swept as needed to remove accumulated litter or other refuse.

Since all materials are processed indoors and putrescible material is processed by the end of the operating day, material does not constitute an odor nuisance. Routine facility sweeping and wash downs of the putrescible material handling areas also prevent significant odor generation.

When needed, appropriate routine measures for the control of odors also includes, but is not limited to, the use of deodorizing granules and/or odor neutralizing agents.

3.14.3 Leachate Collection

All materials are processed on an impervious concrete floor equipped with drainage to a sewer line. The sewer line is directly connected to a wastewater treatment facility that treats the MSW leachate for discharge.

3.14.4 Tip Floor Maintenance

The tipping floor is cleaned at the end of every operational day and between changes in material streams. Material is pushed from all areas of the floor (i.e., unloading area, and processing/loading area), loaded for off-site disposal, and a sweeper may be used for cleaning the floor. If liquid cleaning is required, water from the hose bibs located within the structure will be used for wash down. Surfactants or deodorizers may be used with the water spray to improve the cleaning.

The operation of the facility will not constitute an opportunistic environment for the breeding of vectors. Putrescible material is handled indoors and the tipping floor is completely emptied at the end of each operational day, and deodorized as necessary. Outdoor paved areas are swept as needed to remove windblown litter which happens to escape from the building.

The exterior paved surfaces, including access roads and scales are swept as needed (except during snow removal) for control of dust, litter, and any refuse which may have exited the facility despite precautions. Water spray will be used as necessary during dry periods. Provision is made in the Emergency Response Plan (Section 5.0 for cleanup of spills on the access roads.

Collection vehicles will normally be cleaned elsewhere.

3.14.5 Waste Storage

Pursuant to 6 NYCRR Part 362-3.5(f), putrescible waste is removed from the facility within one business day of a transfer container becoming full or within seven calendar days of receipt, whichever comes first. Incoming waste is typically processed within 24 hours of receipt.

The capacity of the facility is sufficient to accommodate the maximum waste acceptance rate of 749 tons/day, and empty trailers or roll off containers are always available at the site. In the rare event that a transfer trailer cannot be obtained to come to the site and provide transfer services, a trailer or roll off container would be staged to accommodate additional waste quantities for storage as necessary, within the allowable storage timeframes.

3.14.6 Recordkeeping and Reporting

In order to complete the transfer facility annual report required by the Part 360 permit, all material received at the site, and transported from the site must be quantified and recorded by material type. All waste material of a non-homogenous nature, such as MSW and C&D, delivered to the site will be weighed in the collection vehicle with the on-site truck scale and its weight recorded. Transfer trailers hauling these materials off site will either be weighed using the onsite scale or, if transferring waste to a WMNY disposal facility, their recorded weight at the destination facility can be used. Records from the destination facility must be obtained for use in the facility annual report.

All recyclables delivered to the site will be weighed in the collection vehicle with the on-site truck scale and its weight recorded. Transfer vehicles hauling recyclables to the handling facility will be documented using their recorded weight at the destination facility.

3.14.7 Financial Assurance

In accordance with 6 NYCRR Parts 362-3.5 and 360.22, the Port of Albany Transfer Station maintains financial assurance in amount sufficient to cover the cost of closure of the facility. Closure costs are updated annually and submitted with the transfer station annual report.

4.0 Training Requirements

The Waste Management of New York, LLC Health and Safety Plan is kept on site and readily available at all times.

The operation of the facility is conducted under the direction of a manager who has the responsibility, authority and knowledge to make and implement decisions regarding operating conditions at the facility.

The transfer station is operated under the oversight of a manager, who is available during normal business hours, Monday through Friday, and Saturday. A scale attendant on duty during the same hours keeps time cards and maintains facility records.

Personnel operating within the transfer station and scale house are trained in all operational and safety aspects of the facility. This includes protocols for the safe tipping, compaction, and loading of materials, recognizing and handling unauthorized materials (see Appendix A for copies of the Unauthorized Waste Procedures), etc.

Descriptions of the duties of each of these staff are provided below.

Transfer Facility Manager: Overall responsibility for all aspects of operations. Conducts facility self-inspections, and plans and oversees all remedies of malfunctions. Prepares or approves all reports associated with facility operations. Authorized to implement contingency plan. Participates in the development and implementation of training and safety programs. Responsible for staffing, terminations, and all personnel matters. Direct authority over all facility personnel. Responsible for purchasing decisions and equipment readiness, within company guidelines.

Scale Attendant: Responsible for computer data entry, word processing, filing, maintaining purchasing records and employee timecards, and switchboard/reception.

Equipment Operator: Operates mobile equipment used in handling and processing material. Operates sweeper. Responsible for equipment inspection and requests for maintenance or repair. Trained in proper inspection and safety procedures. Identifies unauthorized materials.

Laborer: Sorts through material to identify unauthorized materials; segregates such material and transfers it to designated storage areas. Performs sweeping and wash down, as needed, of the emptied tipping floor if necessary. Assists with spill cleanup and other miscellaneous tasks as necessary.

Mechanic: Responsible for on-site maintenance and repairs of equipment/ machinery. Helper assists in all assigned activities.

5.0 Emergency Response Plan

This Emergency Response Plan addresses the hazards most likely to be encountered during the operation of the facility. This plan is not, however, to be construed as a compilation of all possible emergencies or hazards which might occur or exist at the site. It is the sole responsibility of the facility operator to ensure that the facility is operated, at a minimum, in conformance with applicable regulations so that the health and welfare of all workers is adequately safeguarded. This facility does not accept any hazardous, liquid, radioactive, regulated medical, contained gaseous, or other materials not specifically identified previously. Therefore, the hazards for which a potential exists at this facility and which this plan addresses are fire, explosion, equipment breakdown, plant shutdown, unusual traffic conditions, and receipt of unauthorized material. The detailed procedures regarding receipt of unauthorized material are included in Section 2.4 and Appendix A.

This Emergency Response Plan is included in this Facility Manual in accordance with 6 NYCRR Part 360.16(c)(4)(iv) to provide description of the actions that facility personnel would take in response to emergencies that could occur at the facility. This Emergency Response Plan replaces all other previous Contingency Plans for the site. All previously approved modifications to the facility and other pertinent facts for the site are included in following.

5.1 Emergency Responder Arrangements

Arrangements will be coordinated with the respective emergency response teams in the event that their service is required at the facility. WMNY maintains contact with the local fire department, police department, and first aid/ambulance squads as listed below. Prints of the facility layout showing location of site features and processing areas, doors, hose bibs, hydrants, and standpipes are provided to each responder, if desired.

The following emergency numbers will be conspicuously posted at the site near telephones:

1. *Fire Department* (Emergency) – 911

   Nearest Engine Company
   Port of Albany Fire Department – 911

2. Police Department

   City of Albany Police Department – 911 or (518) 462-8012

3. Nearest Hospital

   St. Peter's Hospital
   315 S Manning Blvd
   Albany, New York 12208
   Main Phone Number: (518) 525-1550

4. Government Response Agencies

   New York State Department of Environmental Conservation
   Spills Hotline: (800) 457-7362

   New York State Department of Environmental Conservation – Region 4
   Division of Material Management: (845) 256-3000

5.2 Emergency Coordinators

Emergency coordinators for the site are as follows:

Primary:	Warren Harris	
	Business Phone:	518-636-2141
	Cell Phone:	518-248-2809
Secondary:		
	Dave Allen	
	Business Phone:	518-533-3304

At all times during hours of facility operation, there will be at least one Emergency Coordinator on site or on call, with the authority to commit the necessary resources of the facility to carry out the provisions of this Contingency Plan.

The Site Manager is designated as the primary Emergency Coordinator for the facility. Office and cell telephone numbers for this individual are listed above. It is the responsibility of this person to identify and coordinate any special or emergency activities during operating hours. Events that require the attention of the Emergency Coordinator include fire, explosion, air/soil releases, unscheduled facility shutdown, power failure, and delivery of unauthorized material to the facility (other than an incidental amount).

Should an incident take place, the Emergency Coordinator or Site Manager will secure the facility by closing off the affected area. Once the area has been isolated from traffic,

appropriate actions will be taken, for example, activation of fire extinguishers, or removal of combustible material. A logbook will be maintained by the Emergency Coordinator to record events, date, time, description, actions/repairs, etc.

The Emergency Coordinator will be responsible for contacting any additional support teams as needed to assist in responding to an event. If evacuation of the facility is necessary, the Emergency Coordinator will activate the alarm, direct employees to evacuation routes and oversee roll calls at assembly areas.

5.3 Emergency Equipment

Potential safety hazards presented by the operation of this facility consist of fire and smoke or exposure to hazardous chemicals. Occupational hazards could result from the use of mechanical equipment, as well as slip/trip/fall hazards.

General Personal Protective Equipment and Procedures - All employees engaged in the processing of material will be required to wear work boots, dust masks, gloves, goggles or face shields, and ear protection as appropriate. Mobile equipment will have environmentally controlled cabs for protection of the operators. All employees will be shown the location of all safety equipment (including equipment emergency shut-offs) during their training.

Fire Protection Equipment and Procedures - Fire Protection equipment is provided as fire extinguishers within each building and most mobile equipment. All material is handled indoors. This material is moved through the facility using mobile equipment in a quick and efficient manner minimizing the possibility of heat buildup and spontaneous combustion.

In the event of a fire, the following steps will be taken:

1) The person first observing the fire will notify his supervisor immediately. The manager will notify the Port of Albany Fire Department.
2) Area personnel will secure the nearest fire extinguishers and apply these to the fire.
3) Machine operators will turn the material pile so as to expose any combusting material.
4) Hoses will be deployed from hose stations.
5) Fire Department personnel will extinguish any fire not controllable by site personnel.
6) Evacuation will be implemented if this is necessary.

7) Until clearance is given by the Fire Department no material will be tipped within the facility.

Fire extinguishers will be available outside the transfer station building, at the on-site office, and on vehicles. All fire extinguishers will be capable of fighting Class A, B, and C fires as defined by the Underwriters Laboratories. All operating personnel will receive periodic training in the proper use of firefighting equipment. Facility personnel will be trained in the use of fire extinguishers and to immediately call for professional assistance when necessary.

Spill Response Equipment and Procedures

After emergency services are contacted for any potential injuries, an employee at the location of the spill will check if the spill meets all of the following criteria and inform a WM Environmental Protection Manager.

- The spill is known to be less than 5 gallons; and
- The spill is contained and under the control of the spiller; and
- The spill has not and will not reach the State's water or any land; and
- The spill is cleaned up within 2 hours of discovery.

If the petroleum spill does not meet all the above criteria, the spill is reportable and must be reported to the DEC spill hotline (1-800-457-7362). If the spill does meet all of the above criteria, the spiller will follow up with the WM Environmental Protection Manager, and the manager will determine if the spill will be reported to the DEC.

The Environmental Protection Manager may need to notify other State and Federal agencies depending on the material that is spilled. A table of guidelines for State and Federal Reporting Requirements for Petroleum Spill, Leaks and Discharges is provided in Appendix E.

For spills not deemed reportable, the Spill Information Worksheet found in Appendix B will be completed by the supervisor on initial call-in and a record of the incident will be maintained onsite for one year.

Spill control gear and materials and personal protective equipment will be kept inside the facility. Base stocks of materials will be maintained by the designated individuals and inventories checked on a regular schedule. Missing or consumed items will be restocked. Stock items include oil absorptive pillows and dams,

absorptive powders, neutralizing agents, shovels, and brooms, and cleanup support items such as drums. Personnel protective equipment (PPE) items may include poly-coated TYVEK protective coveralls, protective gloves, and splash shields. For more serious situations, contractors trained in hazardous materials handling will supply air purifying respirators with cartridges or self-contained breathing apparatus to perform their work, if needed.

Managers and mobile equipment operators will receive training in handling unauthorized materials in containers and managing limited spills of other materials, as appropriate, while awaiting aid from a HazMat team, if necessary. These staff will be trained to identify substances which may require outside assistance. If no special control is required, then operations at the facility will continue. If special controls are required, then part or all of the activities at the facility may need to be halted. In the case of violent chemical reactions, fire, or dangerous vapors resulting from a spill evacuation procedures will be followed.

Depending on the nature of the spill, affected areas of the transfer station may need to be segregated. Solid material spills, such as soils or muds may be easily scooped up with a shovel or a wheel loader, and placed into a containment drum labeled and staged for alternative off-site disposal. Sweeping or washing of the area may be all that is required to complete the cleanup.

For liquid material spills, such as for chemicals or petroleum products, cleanup may be performed by: segregating the spilled material from the surrounding material by pushing the materials away with a shovel or wheel loader; placing an absorptive barrier (such as absorptive pillows) around, or on the down slope side of the spill, or on the spill; identifying and neutralizing the material with spill control powders; and finally, scooping the material into containment drums using shovels or a wheel loader. Final cleanup of the floor residue may be performed by working dry absorptive powders into the material and drumming the material.

Other response procedures may include the following: bulging or rusted drums and containers of unknown liquid materials may be kept segregated for a licensed hazardous material handler to over pack, remove and dispose; unlabeled electrical transformers may be segregated for removal and disposal by a licensed PCB material handler; fuming liquids, moist fuming solids, materials spontaneously producing heat (exothermic materials) and bulk chemicals may require notification of a HazMat team for control and removal.

Asbestos Cleanup Procedures - Asbestos is not accepted at the facility; however, suspect asbestos containing materials (ACM) may be segregated by pushing away adjacent materials and covering the ACM with 6 mil polyethylene sheets prior to removal by third-party trained asbestos abatement personnel, who would handle proper containment, disposal, and any necessary decontamination.

General Safety and Emergency Equipment - Emergency equipment will be placed and stored at the facility and will include the following:

1. First Aid kits, portable eye washes, safety glasses, work gloves.
2. Fire extinguishers, Type ABC and CO2 type (Type BC) Fire extinguishers will be located throughout the site.
3. Equipment for moving containers or debris.
4. Two way communication radios, as needed.
5. Worker protective gear includes safety goggles, ear protectors, hard hats, gloves, rain gear, and boots. This equipment will be examined for defects daily by the individual workers. The supply of this gear will be examined weekly by the RTS supervisors.
6. Protective barriers, temporary signage and traffic cones – to be used throughout the facility for worker protection.

   Spill response equipment.

Vehicles on location may be used to transport persons to hospitals when the need arises.

5.4 Evacuation Plan

In the event that the emergency response gear maintained at the facility is inadequate for the task at hand and the nature of the emergency is such that there is a real and present risk of injury to the site personnel, the site will be evacuated. Such an evacuation will be announced by use of an alarm horn and verbal instructions from managers. Appropriate agencies, specifically the Albany Police Department and the Port of Albany Fire Department shall be immediately notified of such a decision so that any dangers to the public at large may be promptly and adequately assessed. The senior person at the site will make the decision to evacuate the site and will, at that time, indicate her/his decision by verbally notifying all personnel, should such action be

possible, and activating an alarm. The evacuation will proceed according to posted evacuation routes; personnel will assemble at the entrance gate. Roll calls will be performed at the assembly areas so that all personnel may be accounted for.

During emergency situations, evacuation signals will be given through the onsite communications system, or alternately, through the use of bullhorns. The manager will direct all trucks to exit the facility to make room for emergency responders.

Upon hearing the evacuation alarm, all employees will shut off and leave operations equipment, and proceed calmly to the nearest personnel door. Tipping floor operators will direct all collection vehicle drivers to discontinue unloading, shut off all engines, and exit the building with facility employees. Evacuation routes from the building and the site are shown on Figure 2. All employees will assemble outside the administrative building area for further instructions and assistance by emergency responders. Evacuation routes will be labeled as per 29 CFR 1910.145 and any applicable local rules and regulations.

Fire drills, as well as initial safety training, will be conducted for all employees to rehearse these procedures.

5.5 Operational Contingencies

If an unscheduled total facility shutdown exceeds 24 hours, the facility will immediately notify the Department describing the incident and the proposed waste management activities in accordance with 360.19(d)(9). This section discusses the operational issues that may arise and alternatives to handling the wastes that are present at, or enroute to, the transfer station. In the event that a mechanical problem, fire, or other unforeseen circumstance requires an unscheduled shutdown, all material which is on-site will be processed and loaded for transport, if possible. Incoming material will be rerouted to the other WMNY or third party facilities in the Capital Region in a contingency situation. If necessary, material already delivered may be reloaded into containers on trucks and carted to one of these alternate WMNY or third party transfer stations, within 24 hours of receipt.

5.5.1 Equipment Breakdown

Most equipment failures will not cause a facility shutdown due to the availability of replacement equipment and available storage volume for material. In the event an equipment malfunction prompts a shutdown, several alternatives are available depending on the magnitude of the malfunction. The following options for mechanical equipment items are listed in order of preference. Should a

certain action be inadequate to address the malfunction, the next action listed will be attempted. The following actions will be taken, as appropriate, to remedy equipment malfunction:

- troubleshoot and repair;
- obtain alternate equipment from another WMNY facility;
- rent alternate equipment; and
- bypass the affected operation.

In the event of facility shutdown, commercial material could be turned away at the gate. An attempt may be made to cancel scheduled deliveries. In some instances, equipment failure will not cause an interruption of an extended nature because equipment repairs can be made or alternate equipment obtained quickly. In such instances, the facility may implement a suspension of affected processing operations and if necessary suspend acceptance of certain type(s) of material, without implementing a full facility shutdown. During this suspension, material may still be accepted provided that the facility's daily cutoff for incoming material will not be exceeded. However, processing operations affected by the equipment breakdown and, if necessary, acceptance of certain type(s) of material would be temporarily suspended. Staffing and controls sufficient to handle the material in accordance with Part 360 would be maintained at the facility during the period when affected processing operations are suspended. Under the circumstances described above, the facility will continue to comply with all documents supporting the permit application, including operating the facility as described in the NYSDEC-approved engineering report and as shown on all NYSDEC-approved plans as per Part 360-1.7(a)(1)(i).

Mechanical equipment to be used at the facility will consist of the following:

1. Rubber Tire Loader
2. Excavators with Grapple attachment
3. Scale
4. Skid Steer
5. Yard horse(s)

In the event of equipment breakdown, several alternatives are available, depending on the degree of malfunction and the time required for repair. The Contingency Plan calls for the following (in order to priority):

A. Rubber Tire Loader (RTL), Grapple, Yard Horse(s) and Skid Steer

1. Service and repair of RTLs;
2. Use other RTLs at the facility;
3. Obtain alternate equipment from another WMNY facility or through rental;
4. Divert material to an alternate site for processing;
5. Direct transport of material to an approved disposal site.

B. Scales

1. Service and repair of scale;
2. Use of nearby off site certified scales
3. Obtain alternate scale through retail at facility;
4. Quantify material by estimated volumes and verify with weights at delivery points

5.5.2 Utility Shutdown

The Port of Albany facility is serviced National Grid and public water from the City of Albany.

In the event of a widespread interruption of utility services due to weather damage, material could still be accepted, since there is available storage volume at the site. The facility's lights, ventilation, odor control systems, and other critical equipment can be powered by generators. Monitoring of incoming material would be accomplished by maintaining a record of all trucks entering and leaving the facility including information on the type and capacity of the trucks or containers, and the type and volume of the material it is carrying. The facility will keep a running total of material processed to ensure that the NYSDEC permitted capacity for the facility is not exceeded.

In the event of an electrical shutdown the facility will be served by backup generators. However, if these generators cannot be used, material will be loaded into open-top trailers until power is restored.

5.5.3 Unusual Traffic Conditions

WMNY maintains a fleet of vehicles to transport material to and from its facility. Unusual traffic conditions will be handled in accordance with State DOT standard procedures and the terms of the transporters Contingency Plan. Street traffic in and around the facility is directed at all times by WMNY equipment operators. During periods of unusually high traffic with the facility, other site personnel will

assist with traffic control. However, the material haulers are responsible for all plans and procedures for handling unusual traffic conditions outside of the facility. WMNY does maintain contracts with many licensed material trucking companies in the event that an unusual traffic condition prevents certain haulers' transfer trailers from reaching the Port of Albany facility. By maintaining contracts with many trucking companies, the facility has multiple options available to help maintain an adequate supply of trailers to remove the material from the facility.

5.5.4 Hauler Breakdown

In the event of a mechanical breakdown either from the generator to the transfer facility or the transfer facility to the disposal facility, the driver is instructed to remove his truck from the road, to the extent possible, leaving the trailer/container closed at all times. He/she will remain with the truck at all times.

The driver will contact the Port of Albany transfer facility with either an on-board telephone or a CB or two-way radio to notify WMNY of the situation. The transfer facility or disposal facility (depending upon which is closer) will then dispatch a repair crew, either from the transfer facility or landfill directly, or through contracted emergency response crews. These crews are available 24 hours per day, seven days a week.

WMNY will notify the local police and fire department in the event that the truck cannot be rendered operational within 24 hours of the original notification from the driver.

If the truck cannot be made operational, it will be towed to the transfer facility or disposal facility and the material will be off-loaded.

5.5.5 Accidents

In the event of an accident, the following procedures shall be followed:

a. For accidents resulting in damage only to the truck, the procedures set forth above in Section 5.5.4, shall be followed.

b. In the event of an accident which results in damage creating any potential for release of material a replacement truck will be dispatched in addition to the above procedures.

5.5.6 Fire Prevention and Control

Open burning is expressly prohibited at all times. Spills will be attended to immediately and removed using dry methods. Access to all areas of the facility will be maintained at all times for fire-fighting and emergency response equipment. In the event that the facility requires evacuation, operators will activate the alarm and supervisory personnel will verbally direct personnel to posted evacuation routes.

Outdoor operations are restricted to tarping and weighing of collection vehicles. All material tipping, processing, and loading activities, are conducted within enclosed buildings. All exterior paved areas are swept as needed to capture loose litter which escapes the enclosed facility, minimizing fire hazards. Portable extinguishers are located in all site facilities, including the transfer building. "No Smoking" signs will be posted in accordance with the requirements.

Exhaust fans are present for emergency purging of smoke. As shown on Figure 2, a hose bib is located inside the building. Public water is supplied to the building.

Periodic inspections of the serviceability of portable extinguishers and an annual maintenance check of fire extinguishers by a qualified person/vendor will be performed. Also, periodic inspections of areas known to contain fire hazards will be performed. Employees will be informed of fire hazards in their work area or job duties. The Fire Prevention Program includes procedures for notifying workers and the Fire Department, fire extinguisher usage training, and a posted evacuation route.

5.5.7 Natural Disasters (Secondary Services)

In accordance with 6 NYCRR Part 360.16(c)(4)(iv)(b), the emergency response plan must include a description of the facility's ability to respond to a natural or manmade disaster that may call for expanded or non-standard services with department approval. Even if a natural disaster does not directly impact the facility's operations, additional services may be required to accommodate the facility's service area. Any other secondary services provided by the facility, such as accepting materials over the maximum permitted acceptance rate or bulk storm debris, will be approved by the Department prior to implementation.

6.0 Closure Plan

The purpose of facility closure is to ensure that the facility operations will be terminated in an organized manner that will preclude or minimize the need for further site maintenance or corrective actions and to prevent or remedy adverse environmental or health impacts. Properly implemented, the closure procedures must ensure that adverse environmental or health impacts such as, but not limited to, contravention of surface and groundwater quality standards, gas migration, odors and vectors, are minimized after site closure.

Facility closure will be implemented in the event of a situation where the facility has not received solid waste for more than one year, unless otherwise authorized by the NYSDEC, or if the facility's Part 360 permit has legally expired. Facility closure will also be implemented in the event of termination of use of the facility resulting from permit renewal denial or an order of the NYSDEC or of a court.

This Closure Plan will be modified anytime during the active life of the facility whenever changes in the operating plans or facility design affect the Closure Plan. In these cases the proposed revised Closure Plan will be submitted to the NYSDEC for review and closure prior to finalization.

6.1 Closure Procedures

Since the facility operations do not correspond to an ultimate or finite on-site disposal capacity, a specific closure date is not specified. Presently, active facility operations are anticipated to occur for an indefinite time period.

The facility will notify the NYSDEC in writing at least 30 days prior to the date that the facility is expected to begin routine closure. Within 30 days after final waste receipt, an annual report will be submitted to the NYSDEC. Within 60 days after final waste receipt, all remaining waste will be removed and delivered to an authorized solid waste management facility. All remaining closure activities will be completed within 90 days after receiving the final quantity of solid waste or recyclables.

All solid waste and recyclables present in the facility at the time the final inbound load is received will be routinely processed and removed from the facility. Recyclables will be shipped to the appropriate reuse markets and all solid waste not amenable to reuse or recycling will be delivered to authorized disposal sites.

All mobile facility equipment pieces involved with the solid waste and recyclables management activities will be thoroughly cleaned and washed, as necessary, for purposes of decontamination. This equipment washing will occur within the Transfer Station building to take advantage of the liquid handling system provided for this

building. The interior floors and walls of the Transfer Station building will be thoroughly cleaned and washed. In addition to this general wash-down step, additional washing, using high-pressure water, steam cleaning and/or detergents, may be provided for the interior of the Transfer Station building, as necessary, to ensure that this building is adequately cleaned and decontaminated. All wash water generated within the interior of the Transfer Station building by these routine closure activities will be collected and managed in accordance with the facility's liquid management procedures (Section 3.5).

The paved portions of the facility will be cleaned as needed by sweeping, using either hand brooms or a broom attachment to a mobile equipment piece. All pavement sweepings as well as any extraneous trash and litter that may be present across the facility will be collected and containerized for offsite disposal.

It is anticipated that the facility's mobile equipment pieces will be utilized offsite at other material processing facilities or salvaged offsite as recoverable scrap metal. Dismantling and cleaning of such equipment will be to the extent necessary for this actual offsite use.

The building will not be dismantled; rather, it will remain for alternate continuing use of the property. Likewise, the various asphalt and concrete pavement present in the yard areas will remain after cleaning, for continuing site use. Similar facility appurtenances, such as perimeter fencing and gates, lighting, etc., will remain after facility cleaning and closure. All facility signs specific to solid waste management operations will be removed.

Following completion of the described closure activities, a closure report will be prepared and certified by a New York State Licensed Professional Engineer and submitted to the NYSDEC. The Closure Report will certify that the facility was properly closured in accordance with the NYSDEC-approved Closure Plan.

Since the Closure Plan provides for offsite removal of all solid waste and recyclables and facility cleaning and decontamination, no routine post-closure measures will be required.

6.2 Closure Cost Estimate

Appendix D contains cost estimates corresponding to the closure steps detailed above. For purposes of estimation of costs for closure, it is conservatively assumed that a total of 749 tons of material will be onsite that will require offsite disposal by a third party.

This figure corresponds to the facility's currently-proposed approved design capacity. These third-party closure cost estimates will be reviewed and updated yearly within the facility's Part 360 annual report.

Appropriate updated financial assurance corresponding to the closure cost will be submitted to the NYSDEC by the facility in accordance with the requirements of the facility's Part 360 permit.

7.0 Recordkeeping and Reporting

Operational logs are kept including the date, signature of the recorder, the quantity, description and origin of material received; the quantity and destination of material sent from the facility, and the quantity and the destination of unauthorized material removed from the processing area, by category, and sent from the facility for disposal. In addition, records are kept of all self-inspection activities and any significant events at the facility, such as spills, security problems, contingency transfer events, unscheduled shutdowns, and malfunctions and remedies. Copies of shipping documents, including manifests as needed for unauthorized materials, will be retained in accordance with applicable regulations. Appendix B shows typical operations logs for the facility.

Annual reports will be prepared which will identify equipment additions and facility changes, which detail the volume of various types of material handled. These reports are completed on forms supplied by the Department, which are submitted to the NYSDEC Central Office as well as to the NYSDEC Region 4 office no later than March 1st of each year for the previous year of operation. These records are maintained on site and at WMNY's New York office.

WMNY retains copies of all records relating to the operation of the facility. Copies of all documentation supporting all NYSDEC permit applications will be retained throughout the active life of the facility.

Most records to be retained by WMNY are maintained in files for current reference and as repositories. Files are located based on easy access for the major user. Using this principle the major files maintained by the company can be divided into the following categories:

1. Administrative Files
2. Operational Files
3. Maintenance & Equipment Files
4. Engineering Drawings Files
5. Regulatory Files

These files are set up in either chronological or alphabetical order. Additional records are stored on computers for easy access. Retention periods are set up for each type of file depending on company requirements as well as those of different government agencies. The sole purpose of all the foregoing effort is to enable information to be retrieved accurately and economically within a reasonable time.

Most files are retained in one of two states:

a) Active such files are retained in readily accessible locations.

b) Inactive these files are usually stored in less accessible location (i.e., in archives or secured storage area).

The state of activity is determined for various categories of documents through standardized retention periods and starting dates. At the end of the active period, the files may be transferred to an inactive file. At the end of the inactive period, the files may be destroyed.

Retention Time For Records

The retention time for each record is chosen based on the following considerations:

1. The frequency and extent of reference to the record by employees.
2. The existence of the same information elsewhere.
3. The extent to which the record is transcribed or summarized in another record to be retained for a longer period of time.
4 The necessity of the record as a support or explanation of another record to be retained for a longer period of time.
5. The importance of the record as an integral segment of the historic documents of the organization.
6. The usefulness of the record in its original state for purpose of reporting data, legal activities, and regulatory compliance.
7. The effect that a change of law, regulation, or procedure many have on the value of the record.
8. Retention periods mandated by government agencies (i.e., IRS, USEPA, OSHA, NYSDEC, NYSDOH, etc.)

Records Security

WMNY will use two types of record security:

1. Protection from unauthorized use (e.g., theft, espionage, etc.). The usual practice is to maintain these records under lock and key. Most personnel and medical records are considered as secured files. These records are released only to authorized individuals.

2. Protection against damage from natural causes (e.g., heat, water, dust, etc.). This protection is provided by selection of adequate file cabinets. In addition, redundant copies of important documents are retained in separate offices.

Inventory of Pertinent Records

The table below provides a list of pertinent records and their location at the facility:

Table 7- 1 - Record Locations & Retention Period

Type of Record	Retention Period	Location of Record
Permits	*Historic	Administrative/ Manager/Engineer/ Environmental Manager
Annual Reports	7 years	Manager/Environmental Manager
Quarterly Reports	7 years	Manager/Environmental Manager
Engineering Report	*Historic	Manager/Engineer/ Environmental Manager
Equipment Specifications	For current equipment only	Manager/Environmental Manager
Construction Drawings	*Historic	Manager/Engineer/ Environmental Manager
Correspondence with Agencies	7 years	Manager/Engineer/ Environmental Manager
Training Records	7 years	Manager
Medical Records	*Historic	Administrative/Manager
Maintenance Logs	7 years	Manager
NOTE: *Historic records are maintained for the life of the facility.

PROCEDURES FOR UNAUTHORIZED WASTE FOUND IN CONTAINERS AND TRUCKS

PURPOSE: To establish a policy, procedures and work practices to be followed in the event that unauthorized waste is discovered in containers and trucks.

POLICY: To the extent possible all wastes shall be visually inspected and monitored to identify unauthorized wastes. Any identified unauthorized waste will not be accepted.

PROCEDURE:

1) **Responsibilities:** Due to the many people involved in hauling operations their responsibilities are as follows:

   a) Employee(s)

      i) Report potential or actual unauthorized waste immediately to your Supervisor and Dispatch Operator
      ii) Do not dump container or leave location until cleared by the Supervisor and/or the District Manager.

   b) Supervisor

      i) Notify District Manager
      ii) Respond to scene.
      iii) Check the potential or actual unauthorized waste to see if it is unauthorized waste.
      iv) Contact the appropriate agency if unauthorized waste is found. (Numbers are in Section II of the procedure).
      v) Complete Unauthorized Waste Report Form (UWR, Attachment A).

   c) District Manager

      i) Respond to scene, if necessary.
      ii) Check the potential or actual unauthorized waste to see if it is unauthorized waste.
      iii) Contact the appropriate agency if unauthorized waste is found. (Numbers are in Section II of the procedure).
      iv) Complete UWR (Attachment A), if necessary.
      v) Ensure all evidence and information is gathered.

d) Environmental Compliance Manager

i) Ensure all evidence and information is gathered.
ii) Submit final Report to Regulatory Agency

2) **Notification Procedures for Unauthorized Waste Incidents**

a) Immediately notify the authorities according to the material found:

Note: If major body parts or human corpses are found, do not touch or move them. Call 911 immediately.

i) For Hazardous Waste and Regulated Medical Waste (RMW):

New York State Department of Environmental Conservation (DEC):
(800) 847-7332 (TIPS-DEC, 24 hours)

Region 3:	845-256-3000 (office)
	845-255-3414 (fax)
Region 4:	518-357-2234 (office)
	518-357-2398 (fax)
Region 5:	518-897-1200 (office)
	518-897-1394 (fax)
Region 6:	315-785-2239 (office)
	315-785-2242 (fax)
Region 7:	315-426-7400 (office)
	315-426-7408 (fax)

ii) For Hazardous Waste and RMW originating from a hospital or other primary care facilities only (Article 28 facilities):

NYS Department of Health
Delton Courtney, Health Program Administrator for the Bureau of Hospital and Primary Care Services
Phone: 518-402-1004
Fax: 518-402-1010

The MA Environmental Compliance Manager is verbally notified at (518) 469-8944 and the UWR is faxed to the MA Environmental Manager at (518) 456-2518. The UWR must be **completely** filled out paying close attention to filling out the name of the driver, the generator, the materials found, the times that each regulatory agency and the generator

arrived, and the evidence taken by any party (write "Unknown" for data not obtained and the reason why such data was not obtained).

3) Identification for Categories of Unauthorized Wastes

a) Unauthorized Waste

i) Identification: Wastes that a facility is not permitted to accept, including but not limited to RMW, Electronic scrap, Computer scrap, hazardous waste (paints, solvents, pesticides, etc.), high mercury content fluorescent light bulbs and lead acid batteries. To determine facility specific unauthorized wastes, review facility engineering reports, permits, and registrations. Contact the MA Environmental Compliance Manager for clarifications.

b) Hazardous Wastes

i) Identification:

(1) A chemical waste in solid, gas or liquid form that can pose physical (body) and health hazards to employees and the public if disposed of improperly.

(2) A material is hazardous if it has one of the following characteristics: ignitable, corrosive, reactive, or toxic. It is also hazardous if the waste is listed by the United States Environmental Protection Agency (EPA) and/or the New York State Department of Environmental Conservation (DEC) as being hazardous.

(a) **Ignitable:** a material that ignites at less than 100° F. Examples: gasoline, methane, propane, other natural gases, paint thinner, oil based paints, etc.

(b) **Corrosive:** a liquid or solid that "eats away" human tissue and/or corrode steel at a high rate. Example: battery acid,

Acids: chemicals with a pH less than 2.0
Bases: chemicals with a pH greater than 12.5

(c) **Reactive:** a material that reacts with other chemicals.
Examples: Bleach and ammonia, etc.

(d) **Toxic:** a material that is poisonous. Examples: lead, cadmium, etc.

(3) *Explosives:* Any chemical compound, mixture or device that will detonate in the presence of heat or due to a shock. Example: dynamite, picric acid, etc.

(4) Contaminated Containers: All empty containers that once held hazardous material. Example: a 5-gallon pale that once held ethanol, thinner, etc.

(5) *Gas*: Any pressurized vessel containing a gaseous material or a liquid, which will readily become a gas when under normal room temperature. Examples: Freon 11, 12, 22, propane tanks, etc.

(6) Asbestos: asbestos and asbestos containing materials are not accepted at Waste Management sites (unless the site is permitted to receive asbestos).

(7) Chemotherapy waste. These wastes are usually generated when patients are under treatment for cancer. Although, these wastes are not radioactive, they are usually identified as dangerous drugs that even small amounts can pose a health hazard to workers. Chemotherapy wastes generated at health care facilities are not accepted at

Waste Management sites. They can be identified by a yellow or white bag with the word "Chemo" or "Hazardous Drugs".

Note: If unknown chemicals are discovered in a container or truck, do not open any containers, **immediately notify the District Manager**. The manager shall notify the Environmental Compliance Manager so appropriate actions are taken (i.e., unknowns may have to be sent to a lab, etc.)

c) Regulated Medical Waste (RMW)
   i) Identification: The following definition is in accordance with regulations from New York State.
      (1) RMW is defined by the State of New York in 6NYCRR 360-17.2 as follows:
         (a) A regulated medical waste is any medical waste that is a solid waste generated in the diagnosis, treatment (e.g., provision of medical services), or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals, that is not excluded or exempted below.
         (b) Cultures and stocks of infectious agents and associated biologicals, including: cultures from medical and pathological laboratories; cultures and stocks of infectious agents from research and industrial laboratories; wastes from the production of biologicals; discarded live and attenuated vaccines; and culture dishes and devices used to transfer, inoculate, and mix cultures;
         (c) Human pathological wastes, including tissues, organs, body parts and body fluids that are removed during surgery or autopsy, or other medical procedures, and specimens of body fluids and their containers;
         (d) Liquid waste human blood, products of human blood, items saturated and/or dripping with human blood, or items that were saturated and/or dripping with human blood that are now caked with dried human blood, including serum, plasma, and other blood components, and their containers, which were used or intended for use in either patient care, testing and laboratory analysis or the development of pharmaceuticals. Intravenous bags are also included in this category;
         (e) Sharps that have been used in animal or human patient care or treatment or in medical, research, or industrial laboratories, including hypodermic needles, syringes (with or without the attached needle), Pasteur pipettes, scalpel blades, blood vials, needles with attached tubing, culture dishes (regardless of presence of infectious agents). Also included are other types of broken or unbroken glassware that were in contact with infectious agents, such as used slides and cover slips;
         (f) Contaminated animal carcasses, body parts, and bedding of animals that were known to have been exposed to infectious agents during research (including research in veterinary hospitals), production of biologicals, or testing of pharmaceuticals;
         (g) Wastes from surgery or autopsy that were in contact with infectious agents, including soiled dressings, sponges, drapes, lavage tubes, drainage sets, underpads, and surgical gloves:

(h) Laboratory wastes from medical, pathological, pharmaceutical, or other research, commercial, or industrial laboratories that were in contact with infectious agents, including slides and cover slips, disposable gloves, laboratory coats, and aprons

(i) Dialysis wastes that were in contact with the blood of patients undergoing hemodialysis or renal dialysis, including contaminated disposable equipment and supplies such as tubing, filters, disposable sheets, towels, gloves, aprons, and laboratory coats;

(j) Biological waste and discarded materials contaminated with blood, excretion, exudates, or secretion from humans who are isolated to protect others from certain highly communicable diseases, or isolated animals known to be infected with highly communicable diseases; and

(k) The following unused, discarded sharps: hypodermic needles, suture needles, syringes, and scalpel blades.

(2) Exclusions and exemptions:

(a) Household waste is not RMW;

(b) Ash from incineration of RMW is not RMW once the incineration process has been completed;

(c) Residues from treatment and destruction processes are no longer RMW once the waste has been both treated and destroyed; and,

(d) Human corpses, remains, and anatomical parts that are intended for interment or cremation are not RMW.

(e) Samples of RMW transported off-site by EPA or State-designated enforcement personnel for enforcement purposes are exempt from the requirements of this Part during the enforcement proceeding;

For ENYMA a definition for regulated medical waste has been formulated from the most stringent definitions of the receiving disposal facility states, including New Jersey, Pennsylvania, Virginia, Ohio, Connecticut and Delaware. For the purposes of all ENYMA transfer station employees the definition of RMW is as listed below. There shall be no deviation from this definition.

(3) Regulated Medical waste shall include the following:

(a) Cultures and Stocks. Cultures and stocks of infectious agents and associated biologicals, including the following: cultures from medical and pathological laboratories; cultures and stocks of infectious agents from research and industrial laboratories; wastes from the production of biologicals; discarded live and attenuated vaccines except for residue in emptied containers; and culture dishes, assemblies and devices used to conduct diagnostic tests or transfer, inoculate and mix cultures.

(b) Sharps: This waste shall include but not be limited to used and unused sharps used in animal or human patient care, medical research, or in clinical or pharmaceutical laboratories. This also includes sharp or potentially sharp if broken items such as hypodermic needles, all syringes to which a needle can be attached (with or without the attached needle).

Example: hypodermic, intravenous, or other medical needles. Scalpel blades, blood vials, broken and unbroken glass contaminated with blood, needles with attached tubing, culture dishes (regardless of the presence of infectious agents).

(c) Pathological wastes: Human pathological wastes, including tissues, organs and body parts and body fluids that are removed during surgery, autopsy, other medical procedures or laboratory procedures. The term does not include hair, nails or extracted teeth.

(d) Human blood and body fluid waste: These are liquid waste human blood, blood products such as serum and plasma, items saturated with and dripping human blood; items that were saturated or dripping with human blood and that are now caked with dried human blood, including serum, plasma and other blood components and their containers, which were used or intended for use in patient care, specimen testing, or the development of pharmaceuticals; intravenous bags that have been used for blood transfusions; items including dialysate that have been in contact with the blood of patients undergoing hemodyalysis at hospitals or independent treatment centers; items contaminated by body fluids from persons during surgery, autopsy, other medical procedures or laboratory procedures; specimen of blood products or body fluids, and their containers.

(e) Animal waste: This waste is carcasses, body parts, body fluids, blood or bedding generated from animals suspected or known to be contaminated with infectious agents. Ex: animals used for research that are injected with HIV.

(f) Human tissue: Any human body parts except teeth and gum.

(g) Isolation wastes: Biological waste and waste contaminated with blood, excretion, exudes or secretion from humans or animals isolated with virulent diseases. Isolated animals known or suspected to be infected with highly virulent diseases.

(h) Laboratory wastes: Laboratory wastes that were, or are likely to have been, in contact with infectious agents that may present a substantial threat to public health if improperly managed.

Autoclaved waste will not be accepted at any WM of NYC transfer station. This material should be transported to the BFI facility located at Porter and Thames Streets in Brooklyn, NY.

(4) Regulated Medical Waste shall not include:

(a) Meat or other food items being discarded because of spillage or contamination, unless as described above.

(b) Used products for personal hygiene, such as diapers, facial tissues, and sanitary napkins.

(c) Material, not including sharps, containing small amounts of blood or body fluids, and no free-flowing or unabsorbed liquid.

(d) Fecal matter and urine from animals and humans, unless the product is suspected of being contaminated with an animal or human pathogen.

(e) I.V. tubing, gowns, or any other medical items that are not saturated with blood, blood products (dripping blood) or body fluids or that are not contaminated with such blood and fluids.

However, solid waste from health care facilities (hospital, nursing homes, etc.) containing materials listed in items iii) through v) must not be sent to Virginia.

Please note: *If you are unsure if the material is regulated medical waste or you think it might be regulated medical waste – **TREAT IT AS MEDICAL WASTE** and immediately contact your Supervisor for additional assistance. Medical Waste is to be managed within New York State.*

Any waste that has been in contact with or in the vicinity of RMW, but has been deemed MSW by the regulatory agencies must be incinerated with in the state of New York.

d) Radioactive Wastes

i) Identification

Radioactive wastes are materials that are undergoing decay or transforming to a different chemical. While these materials are decaying, they emit energy that can pose a health hazard to workers and the general public. Radioactive materials are usually used in healthcare facilities such as hospitals and laboratories to treat patients suffering from cancer and to conduct research with cancerous tissues. Hauling Divisions may discover radioactive wastes in the following forms:

(1) Liquid wastes. Liquid scintillation wastes generated from university hospitals, laboratories, etc: Example: scintillation cocktails, patient urine, etc.
(2) Solid wastes. These can also be generated at the institutions mentioned above and also in households where patients are under treatment. Example: animals carcasses. Disposable or unusable contaminated labware, protective wear, spill clean up materials contaminated with radioactive materials; sharps such as needles; soiled diapers, gowns, gloves, and personal items.

4) Procedures

a) Container

i) Open lid of container and visually look for any potential or actual unauthorized waste.
ii) If potential or actual unauthorized waste is noted in the container, the driver and/or helper must immediately report to Dispatch and the Supervisor. **DO NOT** dump the container into the truck.
iii) Upon arrival at the scene, the Supervisor must determine if the waste is unauthorized waste.
iv) The determination of the waste will decide which action should be taken.
(1) If the load is not unauthorized waste the container can be dumped into the hopper of the truck. The supervisor must observe the entire contents of the container being dumped into the hopper of the truck. **If at any time there is any indication of unauthorized waste the dumping must be stopped and the actions of No. 2 below must be taken.**
(2) If the load is unauthorized waste, the container must not be dumped. The supervisor must contact the District Manager, the Environmental Director, the NYSDEC (RMW,

hazardous waste, radioactive waste), and/or the NYSDOH (RMW and radioactive material from Article 28 facility only) at the phone numbers listed in Section III (B) of Policy Number 8-1.

v) The supervisor must remain with the container until the appropriate agency arrives.
vi) Follow the directions of the appropriate agency.
vii) Take at least two (2) pictures of the unauthorized waste (mark date, time, and the name of the generator on the pictures)
viii) In either instance the Supervisor or Manager is to fill out the UWR form.

b) Hopper of Truck
i) If potential or actual unauthorized waste is found in the hopper, the driver and/or helper must immediately contact Dispatch and the Supervisor. **DO NOT** leave the scene.
ii) Upon arrival at the scene, the Supervisor must determine if the waste is unauthorized waste.
iii) The determination of the waste will decide which action should be taken.
(1) If the load is not unauthorized waste the hopper can be cycled and the truck may continue on it's route. The Supervisor must remain and observe the hopper being cycled. **If at any time there is any indication of unauthorized waste, the cycling must be stopped and the actions of No. 2 must be taken.**
(2) If the load is unauthorized waste, the hopper must not be cycled. The supervisor must contact the District Manager, the Environmental Director, the NYSDEC (RMW, hazardous waste, radioactive material), or the NYCDOH (radioactive material and RMW from an Article 28 facility only) at the phone numbers listed in Section III (B) of Policy Number 8-1.
iv) The Supervisor must remain with the truck until the appropriate agency arrives.
v) Follow the directions of the appropriate agency.
vi) Take at least two (2) pictures of the unauthorized waste (mark date, time, and the name of the generator on the pictures).
vii) In either instance, the Supervisor or Manager is to fill out the UWR form.

5) General Emergency Procedures

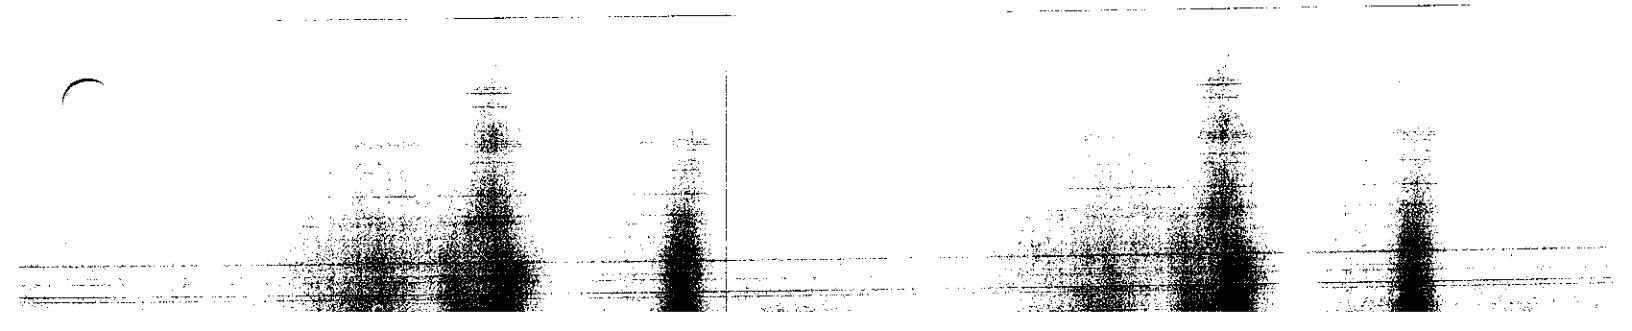

If a worker becomes heavily contaminated with radioactive waste, blood or bodily fluids, chemicals or sustains an injury such as needle stick while working, follow these steps:

1. Isolate worker from the source (radiation, liquid blood, chemicals), and ask him/her to disrobe and cover the worker with a clean blanket or change of clothes and call 911 for an ambulance.

2. If the injury is not life threatening (i.e., needle sticks), have the worker checked out at a clinic or hospital.

3. Fill out an accident/injury report, notify the insurance company at 1-800-WMI-1032 and contact the New York State Data Specialist.

TAB B

WASTE MANAGEMENT

Hudson Valley District

Policy Number: 8-1
Effective Date: 1/97
Revision Date: 1/98, 6/98, 6/99, 7/99, 4/00, 9/00, 3/02, 4/03

UNAUTHORIZED WASTE PROCEDURES including Hazardous, Regulated Medical and Radioactive Wastes

PURPOSE: To establish a policy, procedures and work practices to be followed in the event that unauthorized waste is discovered.

SCOPE: All Waste Management of New York, LLC transfer stations and recycling facilities in the Eastern New York Market Area

POLICY: All loads entering the facilities shall be visually inspected and monitored to identify unauthorized wastes. Any identified unauthorized waste will not be accepted.

PROCEDURE:

I. Responsibilities

1. The District Manager has overall responsibility for the implementation of the Unauthorized Waste Control Plan for transfer stations and recycling facilities. The MA Environmental Compliance Manager shall also provide technical assistance and support on matters pertaining to unauthorized wastes and related training.

2. The general workforce is responsible for carrying out the procedures and practices outlined in this document regarding the identification, segregation, and notification of unauthorized waste.

3. The MA Environmental Compliance Manager has the following responsibilities: developing and implementing waste control program and procedures, developing and coordinating the Unauthorized Waste Control Plan and procedures, performing environmental audits, reporting incidents, and compliance assurance.

4. Waste Management drivers are responsible for abiding by the practices and procedures outlined in this plan as well as the procedures contained in the Waste Management of New York, LLC "Procedure for Unauthorized Waste Found in Containers or Trucks".

II. Safe Work Practices

1. Do not expose yourself more than necessary to hazardous wastes, regulated medical wastes, and radioactive wastes.

2. Adhere to all company safety policies. Do not permit people on the tipping floor. If it is absolutely necessary (i.e. requested by a regulatory agency), turn off all equipment inside the transfer station before allowing persons on the tipping floor.

3. Don personal protective equipment (PPE) as described in further sections.

4. Do not wander around offices, lunchrooms, and other meeting places while wearing contaminated PPE.

5. Wash your hands with soap and water after removing PPE.

6. Once identified, isolate unauthorized waste from other waste to prevent further contamination without compromising your health or safety. Do not mix unauthorized wastes with other wastes.

7. Immediately report any injuries to your supervisor.

III. Notification Procedures for Unauthorized Waste Incidents

At Waste Management, in order for a load to be accepted, the hauler must have received both in-bound and out-bound tickets. The load is not accepted when it is tipped. WM reserves the right to reject any suspicious loads and any loads containing any of the wastes not permitted as per each facility's engineering report.

Note: If major body parts or human corpses are found, do not touch or move them. **Cease all operations. Immediately notify the District Manager**. The Manager shall immediately call 911 to report the finding.

When hazardous waste and/or regulated medical waste is found, follow these steps:

A. Non-WM Hauler:

1. If the incoming hazardous waste, radioactive waste and/or RMW is identified prior to being commingled with other materials on the tipping floor or the rest of the solid waste, the load is rejected and the hauling company is notified. Document the rejection on an Unauthorized Waste Report Form (UWR). See "Attachment A".

   a. If the material is hazardous waste, the UWR form is faxed to the MA Environmental Compliance Manager within 24 hours and is maintained at

the facility for NYSDEC staff review if requested. Verbal communication with the MA Environmental Compliance Manager is recommended at the time of the incident. The incident is to be included in the annual report.

b. If the material is RMW or Radioactive waste, the UWR is to be faxed immediately, incomplete if necessary, to the NYSDEC Region Solid Waste Engineer, to the NYSDOH Health Program Administrator for the Bureau of Hospital and Primary Care Services (if the generator is an Article 28 facility) and to the MA Environmental Compliance Manager. See section III (B)(3) for contact information. Verbal communication with the MBA Environmental Compliance Manager is mandatory at the time of the incident. Notify the generator and the hauling company. Take at least two (2) pictures of the material and attach to the UWR. Make note of the time, date, and the name of the hauler/generator on the back of the picture. If a digital camera is used, write the disk number and picture number on the UWR. Follow-up reports (using the same UWR form) are to be submitted 24 hours after the incident and again one (1) week following the incident (or as soon as all information is available) to all regulatory agencies involved and to the MA Environmental Compliance Manager. Maintain the UWR form at the facility for future review by regulatory agency staff, if requested. The incident is to be included in the annual report.

2. If the hazardous waste, radioactive waste and/or RMW has commingled with other materials on the tipping floor and/or solid waste, isolate the area. Proceed as described in Section III (A)(1)(b) above.

B. WM Truck:

1. Follow the same steps as in Section III (A)(1)(b) above and ask the driver to witness the material found and sign the ticket (the ticket documents the material type and amount found).

2. Attach the pictures to the copy of the ticket in which the driver has already printed and signed his or her name on. Place the ticket on the unauthorized material or other container belonging to each generator, once the material has been segregated.

3. Regulatory Agency contact numbers:

a. For all Unauthorized Waste notify the Region Solid Waste Engineer:

New York State Department of Environmental Conservation
Region 3: 845-256-3000 (office)
845-255-3414 (fax)
Region 4: 518-357-2234 (office)

518-357-2398 (fax)
Region 5: 518-897-1200 (office)
518-897-1394 (fax)
Region 6: 315-785-2239 (office)
315-785-2242 (fax)
Region 7: 315-426-7400 (office)
315-426-7408 (fax)

b. For RMW or Radioactive waste originating from a hospital or other primary care facilities only (Article 28 facilities):

NYS Department of Health
Delton Courtney, Health Program Administrator for the Bureau of Hospital and Primary Care Services
Phone: 518-402-1004
Fax: 518-402-1010

c. For all Radioactive Waste:

Bureau of Radiation and Hazardous Site Management
Phone: 518-402-8579
Fax: 518-402-8646
Contact: John Zeh or John Abunaw

The MA Environmental Compliance Manager is notified at (518) 469-8944 and the UWR is faxed to the Environmental Director at (518) 456-2518. The UWR must be **completely** filled out paying close attention to filling out the name of the driver, the generator, the materials found, the times that each regulatory agency and the generator arrived, and the evidence taken by any party (write "Unknown" for data not obtained and the reason why such data was not obtained).

IV. Identification, Segregation and Handling Procedures for Categories of Unauthorized Wastes

The following section describes procedures for the identification, segregation and handling for each category of unauthorized waste.

A. Unauthorized Waste

1. Identification: Wastes that a facility is not permitted to accept, include but are not limited to RMW, Electronic scrap, Computer scrap, hazardous waste (paints, solvents, pesticides, etc.), high mercury content fluorescent light bulbs and lead acid batteries. To determine facility specific unauthorized wastes, review facility engineering reports, permits, and registrations. Contact the MA Environmental Compliance Manager for clarifications.

2. Segregation and Handling: Any unauthorized waste, except hazardous and RMW, which the facility is not permitted to accept, shall be managed by one of the following two methods. Document the method used to manage the material in the UWR form.

All Haulers (including WM)

a. Reload the truck and reject the load and/or load rolloff and remove;

b. If the truck cannot be reloaded and the waste is left on site, arrange with the hauler for the waste to be disposed of and charge the appropriate fees to the hauler. Material is to be stored in a secure manner away from normal operating activities while on site. See Attachment B for information on permitted handlers of various waste streams.

B. Hazardous Wastes

1. Identification:

a. A chemical waste in solid, gas or liquid form that can pose physical (body) and health hazards to employees and the public if disposed of improperly.

b. A material is hazardous if it has one of the following characteristics: ignitable, corrosive, reactive, or toxic. It is also hazardous if the waste is listed by the United States Environmental Protection Agency (EPA) and/or the New York State Department of Environmental Conservation (DEC) as being hazardous.

i. **Ignitable:** a material that ignites at less than 100° F. Examples: gasoline, methane, propane, other natural gases, paint thinner, oil based paints, etc.

ii. **Corrosive:** a liquid or solid that "eats away" human tissue and/or corrode steel at a high rate. Example: battery acid,

Acids: chemicals with a pH less than 2.0
Bases: chemicals with a pH greater than 12.5

iii. **Reactive:** a material that reacts with other chemicals. Examples: Bleach and ammonia, etc.

iv. **Toxic:** a material that is poisonous. Examples: lead, cadmium, etc.

c. *Explosives:* Any chemical compound, mixture or device that will detonate in the presence of heat or due to a shock. Example: dynamite, picric acid, etc.

d. Contaminated Containers: All empty containers that once held hazardous material. Example: a 5-gallon pale that once held ethanol, thinner, etc.

e. *Gas*: Any pressurized vessel containing a gaseous material or a liquid, which will readily become a gas when under normal room temperature. Examples: Freon 11, 12, 22, propane tanks, etc.

f. Asbestos: asbestos and asbestos containing materials are not accepted at Waste Management sites (unless the site is permitted to receive asbestos).

g. Chemotherapy waste. These wastes are usually generated when patients are under treatment for cancer. Although, these wastes are not radioactive, they are usually identified as dangerous drugs that even small amounts can pose a health hazard to workers. Chemotherapy wastes generated at health care facilities are not accepted at Waste Management sites. They can be identified by a yellow or white bag with the word "Chemo" or "Hazardous Drugs".

2. Segregation and Handling: If hazardous waste is found on the tipping floor, the following steps should be taken:

a. Non-WM Hauler:

i. If the incoming hazardous waste has not contaminated the tipping floor and the rest of the solid waste, then reload the truck, reject the load, and document the rejection in a UWR form. Retain the UWR form at the facility for future review by NYSDEC staff if requested.

ii. If the hazardous waste has contaminated the tipping floor and other solid waste, then isolate the waste by constructing a barrier, cordening off the area with cones and/or yellow barrier tape. Evacuate all personnel in the immediate area. Notify the NYSDEC Region office and the MA Environmental Compliance Manager.

iii. Take at least (2) two pictures of the hazardous waste (the date, time, and the name of the generator/hauler are marked on the pictures). If a digital camera is used, write the disk number and the picture number on the report. The pictures are attached to the copy of the UWR form.

b. WM Truck:

i. The driver is asked to witness the material found and sign the ticket (the ticket documents the material type and amount found).

ii. Take at least (2) two pictures of the hazardous waste (the date, time, and the name of the generator/hauler are marked on the pictures). If a digital camera is used, write the disk number and the picture number on the report.

iii. The pictures are attached to the copy of the ticket in which the driver has already printed and signed his or her name on, and the ticket is placed on the unauthorized material or other container belonging to each generator, once the material has been segregated as per section IV (B)(2)(a)(ii).

iv. The agencies are notified as per section III (B)(3)(a) thru (c)

v. If approved by the MA Environmental Compliance Manager and regulatory agencies, the hazardous waste is placed in the unauthorized waste storage area.

vi. After all agencies and the generator have inspected the load, the hazardous waste is removed by an authorized licensed and permitted hauler and transported to an approved disposal facility. See Attachment B for a list of permitted hazardous waste haulers.

Note: If unknown chemicals are discovered on the tipping floor, do not open any containers, **immediately notify the District Manager**. The manager shall notify the MA Environmental Compliance Manager so appropriate actions are taken (i.e., unknowns may have to be sent to a lab, etc.)

3. Disposal: Hazardous wastes will be disposed of properly through a licensed hazardous waste disposal facility. Follow these steps when arranging for the transportation and disposal of hazardous waste.

a. See Attachment B to arrange for an authorized hazardous waste transporter to package and transport the hazardous waste to an authorized off-site disposal facility.

b. After the company has packaged the wastes, ensure that the generator's copies of the hazardous waste manifest remains with Waste Management. The hazardous waste manifest has eight (8) pages. One (1) goes to the Waste Management, two (2) to the NYSDEC (if disposed of in NY), the

rest go with the transporter to the final disposal site. It is the responsibility of Waste Management to mail the NYSDEC copies. It is the responsibility of the transporter and disposal facility to distribute the remaining copies of the manifest. The final disposal site sends Waste Management and the NYSDEC, one page of the manifest certifying that the waste was received and disposed. A copy of the manifest will be sent to Waste Management within 30 days of shipment. It is the facility's responsibility to track the receipt of all manifests is within the 30 days. Immediately notify the transporter and Environmental Compliance Manager if the manifest is not received within the 30 days.

c. Retain all manifests indefinitely.

4. Personal Protective Equipment

a. Although each chemical found may require different personal protective equipment, workers must wear chemical resistant apparel when there is a possibility of coming in contact with hazardous chemicals. However, the employee's primary role is to identify possible hazardous chemicals and notify the supervisor immediately.

b. A minimum of safety glasses and nitrile gloves are available at all Waste Management transfer stations and recycling facilities. The District Manager will assess at the time of the incident the PPE employees will wear if they have to come in contact with hazardous chemicals.

C) Regulated Medical Waste (RMW)

1. Identification: The following definition is in accordance with regulations from New York State. RMW is defined by the State of New York in 6NYCRR 360-17.2 as follows:

(a) A regulated medical waste is any medical waste that is a solid waste generated in the diagnosis, treatment (e.g., provision of medical services), or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals, that is not excluded or exempted below.

(b) Cultures and stocks of infectious agents and associated biologicals, including: cultures from medical and pathological laboratories; cultures and stocks of infectious agents from research and industrial laboratories; wastes from the production of biologicals; discarded live and attenuated vaccines; and culture dishes and devices used to transfer, inoculate, and mix cultures;

(c) Human pathological wastes, including tissues, organs, body parts and body fluids that are removed during surgery or autopsy, or other medical procedures, and specimens of body fluids and their containers;

(d) Liquid waste human blood, products of human blood, items saturated and/or dripping with human blood, or items that were saturated and/or dripping with human blood that are now caked with dried human blood, including serum,

plasma, and other blood components, and their containers, which were used or intended for use in either patient care, testing and laboratory analysis or the development of pharmaceuticals. Intravenous bags are also included in this category;

(e) Sharps that have been used in animal or human patient care or treatment or in medical, research, or industrial laboratories, including hypodermic needles, syringes (with or without the attached needle), Pasteur pipettes, scalpel blades, blood vials, needles with attached tubing, culture dishes (regardless of presence of infectious agents). Also included are other types of broken or unbroken glassware that were in contact with infectious agents, such as used slides and cover slips;

(f) Contaminated animal carcasses, body parts, and bedding of animals that were known to have been exposed to infectious agents during research (including research in veterinary hospitals), production of biologicals, or testing of pharmaceuticals;

(g) Wastes from surgery or autopsy that were in contact with infectious agents, including soiled dressings, sponges, drapes, lavage tubes, drainage sets, underpads, and surgical gloves:

(h) Laboratory wastes from medical, pathological, pharmaceutical, or other research, commercial, or industrial laboratories that were in contact with infectious agents, including slides and cover slips, disposable gloves, laboratory coats, and aprons

(i) Dialysis wastes that were in contact with the blood of patients undergoing hemodialysis or renal dialysis, including contaminated disposable equipment and supplies such as tubing, filters, disposable sheets, towels, gloves, aprons, and laboratory coats;

(j) Biological waste and discarded materials contaminated with blood, excretion, exudates, or secretion from humans who are isolated to protect others from certain highly communicable diseases, or isolated animals known to be infected with highly communicable diseases; and

(k) The following unused, discarded sharps: hypodermic needles, suture needles, syringes, and scalpel blades.

(2) Exclusions and exemptions:

(a) Household waste is not RMW;

(b) Ash from incineration of RMW is not RMW once the incineration process has been completed;

(c) Residues from treatment and destruction processes are no longer RMW once the waste has been both treated and destroyed; and,

(d) Human corpses, remains, and anatomical parts that are intended for interment or cremation are not RMW.

(e) Samples of RMW transported off-site by EPA or State-designated enforcement personnel for enforcement purposes are exempt from the requirements of this Part during the enforcement proceeding;

UNAUTHORIZED WASTE PROCEDURES **POLICY NUMBER: 8-1**

For ENYMA a definition for regulated medical waste has been formulated from the most stringent definitions of the receiving disposal facility states, including New Jersey, Pennsylvania, Virginia, Ohio, Connecticut and Delaware. For the purposes of all ENYMA transfer station employees the definition of RMW is as listed below. There shall be no deviation from this definition.

(3) Regulated Medical waste shall include the following:

(a) Cultures and Stocks. Cultures and stocks of infectious agents and associated biologicals, including the following: cultures from medical and pathological laboratories; cultures and stocks of infectious agents from research and industrial laboratories; wastes from the production of biologicals; discarded live and attenuated vaccines except for residue in emptied containers; and culture dishes, assemblies and devices used to conduct diagnostic tests or transfer, inoculate and mix cultures.

(b) Sharps: This waste shall include but not be limited to used and unused sharps used in animal or human patient care, medical research, or in clinical or pharmaceutical laboratories. This also includes sharp or potentially sharp if broken items such as hypodermic needles, all syringes to which a needle can be attached (with or without the attached needle).
Example: hypodermic, intravenous, or other medical needles. Scalpel blades, blood vials, broken and unbroken glass contaminated with blood, needles with attached tubing, culture dishes (regardless of the presence of infectious agents).

(c) Pathological wastes: Human pathological wastes, including tissues, organs and body parts and body fluids that are removed during surgery, autopsy, other medical procedures or laboratory procedures. The term does not include hair, nails or extracted teeth.

(d) Human blood and body fluid waste: These are liquid waste human blood, blood products such as serum and plasma, items saturated with and dripping human blood; items that were saturated or dripping with human blood and that are now caked with dried human blood, including serum, plasma and other blood components and their containers, which were used or intended for use in patient care, specimen testing, or the development of pharmaceuticals; intravenous bags that have been used for blood transfusions; items including dialysate that have been in contact with the blood of patients undergoing hemodyalysis at hospitals or independent treatment centers; items contaminated by body fluids from persons during surgery, autopsy, other medical procedures or laboratory procedures; specimen of blood products or body fluids, and their containers.

(e) Animal waste: This waste is carcasses, body parts, body fluids, blood or bedding generated from animals suspected or known to be contaminated with infectious agents. Ex: animals used for research that are injected with HIV.

(f) Human tissue: Any human body parts except teeth and gum.

(g) Isolation wastes: Biological waste and waste contaminated with blood, excretion, exudes or secretion from humans or animals isolated with virulent

diseases. Isolated animals known or suspected to be infected with highly virulent diseases.

(h) Laboratory wastes: Laboratory wastes that were, or are likely to have been, in contact with infectious agents that may present a substantial threat to public health if improperly managed.
Autoclaved waste will not be accepted at any WM of NYC transfer station. This material should be transported to the BFI facility located at Porter and Thames Streets in Brooklyn, NY.

(4) Regulated Medical Waste shall not include:

(a) Meat or other food items being discarded because of spillage or contamination, unless as described above.

(b) Used products for personal hygiene, such as diapers, facial tissues, and sanitary napkins.

(c) Material, not including sharps, containing small amounts of blood or body fluids, and no free-flowing or unabsorbed liquid.

(d) Fecal matter and urine from animals and humans, unless the product is suspected of being contaminated with an animal or human pathogen.

(e) I.V. tubing, gowns, or any other medical items that are not saturated with blood, blood products (dripping blood) or body fluids or that are not contaminated with such blood and fluids.

However, solid waste from health care facilities (hospital, nursing homes, etc.) containing materials listed in items iii) through v) must not be sent to Virginia.

Please note: *If you are unsure if the material is regulated medical waste or you think it might be regulated medical waste – **TREAT IT AS MEDICAL WASTE** and immediately contact your Supervisor for additional assistance. Medical Waste is to be managed within New York State.*

Any waste that has been in contact with or in the vicinity of RMW, but has been deemed MSW by the regulatory agencies must be incinerated with in the state of New York.

2. Identification of Health Care Facility Waste

All WM owned putrescible solid waste transfer stations are to have personnel in the inbound scale house that question the drivers as to whether or not their load contains waste generated at a health care facility. If the driver answers "yes", that load is identified and a thorough inspection of the load before and after tipping will be conducted. If unauthorized waste is found, the load is rejected. A UWR form is to be completed and faxed to the NYSDEC Region Office, the WM Compliance Manager and the State Department of Health.

3. Regulated Medical Waste Segregation and Handling

a. When health care facility waste is suspected, equipment operators should thoroughly inspect the load by looking for visible leads such as bags red in color, the biohazard symbol, and the "Infectious Waste" and "Regulated Medical Wastes" wordings. Also, items such as I.V. tubing and sharps containers will indicate that the load may contain RMW.

b. If RMW is discovered on the tipping floor, follow the steps outlined in section IV (B)(1)(a)-(b) for hazardous waste.

c. The regulatory agencies are notified according to section III (B)(3)(a)-(c).

d. Contact an approved permitted hauler of RMW to segregate, package and transport the material for off site disposal at a permitted facility in New York State. Allow no more than 24 hours for all agencies and the generator to visually inspect the load before off site transportation.

Note: Do not release regulated medical waste or manifests to the generator unless authorized by the DEC. Refer them to the MA Environmental Compliance Manager for any questions. Agencies such as DEC require that haulers be licensed to carry RMW and any other type of hazardous wastes.

4. Discovery of Regulated Medical Waste on Sorting Lines and Balers

Often times, loose sharps, sharps in rigid and non-rigid containers show up on sorting lines. The sharps are usually generated in households or collected from the streets and are usually dumped with the commingled materials. Follow these steps for household sharps:

a. Sealed sharps containers and/or loose sharps or other RMW:

i. Stop the line and call a supervisor.

ii. The supervisor directs an experienced employee (employee has started series of Hepatitis B shots) to wear nitrile or latex gloves and a dust mask to remove the sharps and place them in the rigid sharps containers located in a strategic place close to the sorting lines.

iii. If there is not an experienced employee available, contact a licensed contractor to conduct the segregating and packaging of the RMW.

b. If body parts, free flowing blood and/or other RMW are discovered, the District Manager stops line and alerts the MA Environmental Compliance Manager immediately.

d. Regulated Medical Wastes in Bales

If regulated medical waste is found in bales, remove the material and place it in the RMW box. If sharps materials are found, insert in sharps container. Contact the MA Environmental Compliance Manager

e. Treated (Autoclaved) Regulated Medical Waste

Waste Management does not accept autoclaved regulated medical waste. Follow the procedure for segregating and handling RMW above. Contact the MA Environmental Compliance Manager

Under no circumstances can autoclaved waste go to Virginia.

If any of the above listed instances are noted on sorting lines or in bales, a UWR form should be completed and faxed to the MA Environmental Compliance Manager.

5. Disposal

a. After the material has been inspected by all parties (allow the generator 24 hours to inspect the load), arrange for disposal of the RMW by calling a hauler licensed to transport RMW as per NYSDEC and EPA regulations. The RMW shall be removed within the period specified in the facility Engineering Reports. All material involved must be managed in New York State.

b. The hauler must provide a Medical Waste Tracking Form or an equivalent manifest at the time of disposal. Within 30 days, the ultimate disposal facility must send the same MWT form signed and dated. Waste is to be managed from cradle to grave (from generation to final disposal).

6. Training

a. All supervisors, manager, operators, and tipping floor staff are trained in the definition, identification, segregation, handling, storage, and proper disposal of RMW and other unauthorized materials. This training also includes instruction in the recognition and hazards associated with other unauthorized wastes such as radioactive waste, hazardous waste, and non-hazardous wastes.

b. Managers and Supervisors receive additional training consisting of the following:

RMW:

- Bloodborne Pathogens Standard (29 CFR 1910.1030),

- Exposure Control Plan, and

Other Unauthorized wastes:

- Chemical spills and radioactive material spills
- Segregation, storage, handling, and disposal of these spills.

c. WM will be conducting annual training for all operators, and supervisors on RMW issues. This training will be conducted by a qualified individual and the frequency of this training is subject to change.

d. Training for new employees will be conducted on an as-needed basis; however all new employees working within a transfer station will be trained on RMW and other unauthorized waste definitions, identification, segregation, handling, and disposal during the first three months of employment.

WM developed a written program to address the requirements for employees who may be exposed to needles, blood, or other materials contaminated with these types of products. A copy of the Exposure Control Plan is included as "Attachment F".

7. Personal Protective Equipment

All employees who retrieve RMW, hazardous waste, and other unacceptable wastes must wear PPE and use the provided tools as follows:

a. RMW Removal and other Unauthorized Wastes:

- Full body Tyvek suit
- Disposable booties or washable boots
- Non-puncture rubber gloves, or other material with equal or greater protection (i.e., latex, nitrile, plastic, etc.)
- Helmets with splash shield or safety glasses and dust mask
- Tools:
  - ✓ Tongs
  - ✓ Shovels
  - ✓ Brushes
  - ✓ Poles
  - ✓ Disinfectant solution

8. Decontamination

Any employee that retrieves RMW from a load shall follow these steps during and after the task:

a. If the RMW is not in a sealed bag, apply a solution of bleach and water (1 part bleach and 10 parts water) to the discovered RMW before removing. Other disinfectants such as antiseptic sprays can also be used. The reason for this action is to avoid inhaling airborne contaminants being generated from the regulated medical waste.

b. Dispose of tyvek suit, gloves and other contaminated PPE, as appropriate.

c. Get rid of disposable booties. However, if the boots are washable, spray a bleach and water solution and let it sit for 5 minutes, then wear gloves and clean with a cloth or paper.

d. If all the PPE show blood or have been in contact with bodily fluids, dispose of it in the RMW box, otherwise, it is regular waste.

e. Wash hands with soap and water.

D. Radioactive Waste

1. Definitions:

a. Background Radiation: radiation coming from sources other than the radioactive material to be measured. It usually comes from cosmic rays from the sun, the soil, and building materials.

b. Distance: a means to protect oneself from radiation. By doubling the distance from the source of radiation, the exposure would be decreased by ¼ of the original amount.

c. Half–life: A means of classifying the rate of decay of radioisotopes according to the time it takes them to lose half their strength (intensity). Half-lives range from fractions of a second to billions of years.

d. Ionizing Radiation: energy emitted by radioactive wastes while decaying.

e. Radioactive wastes are materials that are undergoing decay or transforming to a different chemical that is more stable. While these materials are decaying, they emit energy that, depending on their strength, can pose a health hazard to workers and the general public.

f. Shielding: A barrier that protects workers from harmful radiation released by radioactive materials. Lead bricks, dense concrete, water, and earth are examples of shielding.

g. Time: The longer the exposure to the radiation source, the greater the chance for radiation injury.

2. Identification:

Waste Management will attempt to identify radioactive materials before arriving at transfer stations and recycling facilities. Such identification process will be conducted as follows:

a. Waste Management has sent an indemnification letter to each customer informing them that they are not to dispose of any unauthorized waste, including radioactive wastes at WM facilities.

b. WM Hauling Division has re-routed customers that may generate radioactive materials such as healthcare facilities.

Additionally, Waste Management screens waste before tipping the waste in the following manner:

c. Radiation detectors have been installed at some solid waste transfer stations to monitor for radioactive materials.

d. Scale House Operators ask outside haulers as they come in, if the load contains any unauthorized waste, which includes radioactive wastes.

3. Visual Inspection:

a. After the load has been tipped, operators visually survey the load to determine if there are any unacceptable materials in the load (i.e. radioactive waste).

4. Segregation and Handling

If a load triggers the radiation detectors or if radioactive waste is discovered on the tipping floor, the following steps shall be taken:

Non-WM Hauler:

a. If the load triggers the radiation detectors, reject the load and document the rejection on the UWR form (make sure to get the name of the hauler, the truck plate #, and model). Notify the DOH and the other WM solid waste plants in the vicinity of the rejection ASAP, via telephone or Nextel and fax the UWR form to the Ma Environmental Compliance Manager.

b. If the load bypasses the radiation detectors or detectors are not installed and waste is discovered with the radiation symbol or wording, the District Manager has to determine if it is an empty bag or container using a hand

held Geiger Counter. Ensure that the radiation detectors are operational (the monitors should show the background on the digital display). If it is an empty bag or container, remove it from the load and give it to the driver to take back.

c. If the District Manager feels that there may be radioactive material in the load that was not detected by the radiation detectors, then contact the MA Environmental Compliance Manager and the State Safety Specialist for further determination.

d. If radioactive material was confirmed in the tipped load, isolate the area and keep employees away from that area; then contact the NYSDOH and the NYSDEC and arrange for a complete clean up with the hauler at the hauler's expense.

WM Trucks:

e. If the truck triggers the radiation detectors, contact NYSDOH, the NYSDEC, the MA Environmental Compliance Manager, and dispatch. When they arrive, tip the load and allow regulatory agencies to look for the radioactive material. The District Manager is to keep the employees away from the area. A pay loader may be used to spread the waste to look for the radioactive source(s).

f. Once the material is found, take two pictures and arrange for disposal with a company licensed to transport radioactive wastes.

g. Fill out the UWR form and fax it according to section III (B)(3)(a)-(c).

h. If a radioactive load bypasses the radiation detectors, follow steps b-d in the Non-WM truck part.

5. Rejected Radioactive Waste Loads:

If a truck is rejected because of radiation at a WM or non-WM transfer station, landfill, or incinerator, follow these steps:

a. Contact the MA Environmental Compliance Manager.

b. Survey the truck by driving it through the scale house and through the radiation detectors. For facilities with no radiation detector system, use a hand held Geiger Counter.

c. If the radiation detectors are triggered, follow a-d in the WM Trucks section.

d. If the radiation detectors are not triggered, still fill out a UWR form for verification and documentation purposes and treat the waste as regular waste.

6. Personal Protective Equipment

Radioactive incidents don't frequently take place in Waste Management transfer stations but when they do, the employees who handle and retrieve radioactive waste, RMW, hazardous waste, and other unacceptable wastes must wear PPE and use the provided tools as follows:

Removal of RMW and other Unauthorized Wastes (the PPE needed will depend on the unauthorized waste discovered, check with the Safety Specialists on chemical and radioactive waste incidents):

- Full body Tyvek suit
- Disposable booties or washable boots
- Non-puncture rubber gloves, or other material with equal or greater protection (i.e., nitrile coated, plastic, etc.)
- Helmets with splash shield and safety glasses
- Dust mask
- Tools:
  - ✓ Tongs
  - ✓ Shovels
  - ✓ Brushes
  - ✓ Poles
  - ✓ Disinfectant solution

7. Decontamination

Any employee who is contaminated with radioactive waste shall follow these steps during and after the task:

a. The employee must stay in the contaminated area to be surveyed with a Geiger Counter by the Health and Safety Department. Once surveyed, follow these steps:

i. If the employee is contaminated, dispose of Tyvek suit and other PPE or have the employee remove the pieces of clothes that are contaminated (this should eliminate about 90% of the contamination) and bag the clothes to be surveyed again later.

ii. If the employee is still contaminated, he/she must wash the contaminated area with soap and water. Try not to use too much water to avoid having a lot of contaminated water.

iii. If after surveyed again, the employee is still contaminated, call 911 for the Fire Department Hazardous Materials Unit for assistance and send the employee to the hospital to be examined.

iv. If the PPE show blood or have been in contact with bodily fluids, dispose of it in the RMW box, otherwise, it is regular waste.

v. Wash hands with soap and water.

8. Alarm Set Points

The Bicron detectors should be set between twice (2) and four (4) times the background. This setting can be verified by turning the knob to alarm set and reading the digital display. At this time, the detectors will be set at twice (2) the background but WM reserves the right to change it at any time.

9. Testing and Calibration of Radiation Detection Units

Radiation detectors are sensitive units that need to be tested and calibrated periodically and in accordance with the manufacturer's instructions.

1. Daily Background Reading

Facilities that currently have Bicron detectors must ensure that those units are working properly. At the beginning of each shift, the supervisor or his/her designee must read the background radiation on the monitor and write it on the table on Attachment C (Daily Background Reading). Full tables must be replaced and kept for at least a year.

2. Calibration

The radiation detector units must be sent out for calibration annually and as necessary. JRT Associates is currently performing all repairs and calibration services for Waste Management of New York. They can be reached at (800) 221-0111.

10. Disposal

Waste Management is not licensed to transport or store radioactive waste, therefore, any radioactive waste that is discovered must be disposed of as soon as possible. Contact a hauler that is licensed to transport and store radioactive materials for proper disposal.

11. Training

All supervisors, managers, scale operators, and operators are trained in the definition, identification, hazards, segregation, handling, and proper disposal of radioactive wastes. This training also includes instruction in the recognition and hazards associated with other unauthorized wastes such as hazardous waste and regulated medical wastes. No employee should handle radioactive wastes without the appropriate training and personal protection.

Managers and Supervisors receive additional training consisting of the following:

- Radioactive material spills.
- Segregation, storage, handling, and disposal of these spills.
- Actions to take in case of contamination.

E. Mixed Unauthorized Wastes

If at any time, mixed waste is discovered, manage the incident according to severity of the hazard. That is, a radioactive waste is managed first, then hazardous wastes and last regulated medical waste. Notify both the NYSDOH and NYSDEC for mixed waste incidents.

VI. General Emergency Procedures

If a worker becomes heavily contaminated with radioactive waste, blood or bodily fluids, chemicals or sustains an injury such as needle stick while working, follow these steps:

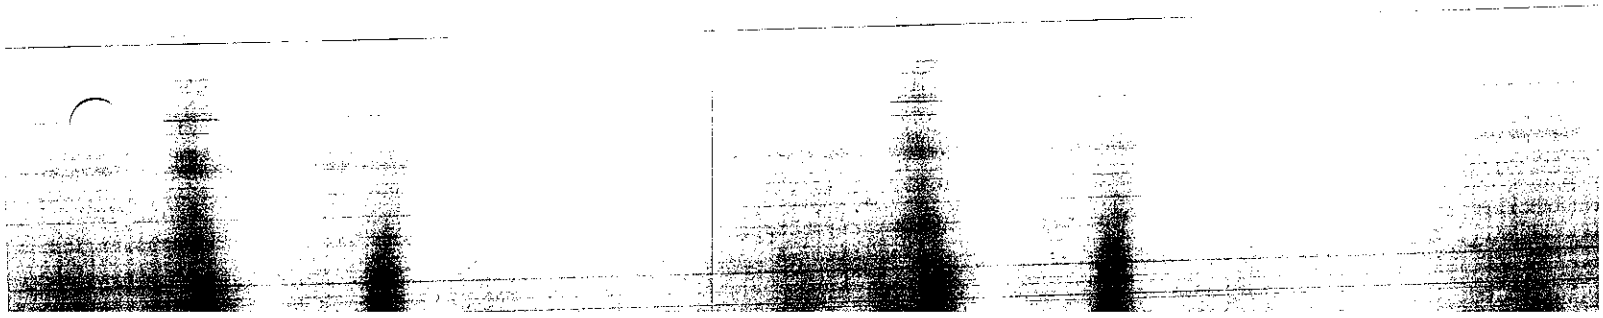

1. Isolate worker from the source (radiation, liquid blood, chemicals), and ask him/her to remove contaminated clothing and wash contacted areas immediately with disinfectant soap and water.

2. As soon as practical escort the individual to a hospital for treatment. Call 911 if necessary.

3. If the injury is not life threatening (i.e., needle sticks), call the company doctor if necessary. (See the Exposure Control Plan in Attachment F for more details).

4. Fill out the accident/injury report and notify the State Safety Specialist Staff by both phone and fax.

Re: Household Medical Waste
December 31, 2003 Waste Management Letter

Dear Ms. Santell:

The Department of Environmental Conservation has received your December 31, 2003 letter regarding management of household medical waste. The Division of Solid and Hazardous Materials, Region 3 agree with the procedure you outlined in your letter (attached) with one proviso. The sorting and packaging of *any* medical waste must be performed by a qualified and independent contractor specifically trained for not only identification of but proper segregation and handling of medical waste. The proper documentation demonstrating the contractor's qualifications must be made available to the Department at the time of the medical waste incident. **The documentation must be in the form of copies of the training certification(s) or an equivalent demonstrating that the medical waste contractor is qualified to identify, segregate, and package medical waste.**

As a reminder, the Department is still awaiting a final version of Waste Management's "Unauthorized Waste Procedures" including radioactive wastes for all the transfer stations that Waste Management owns or operates in the Department's Region 3. The final version must be stamped and signed by a Professional Engineer licensed to practice engineering in the State of New York.

If you have any questions or comments please contact me at (845) 256-3131 or Dave Pollock, at (845) 256-3138.

Sincerely,

Frank J. Kelly
Environmental Engineer I

Attn: Mr. Frank Kelly

Re: Household Medical Waste

Dear Mr. Kelly:

As you are aware, the Orange County Transfer Station in Newburgh, NY, that is operated by Waste Management of NY, LLC (WMNY), has had three (3) incidents of unauthorized medical waste during the month of December. All three incidents involved diabetic syringes that could be traced back to either the residential drop-off area located at the facility, or to a load originating from a residential garbage truck.

In all three incidents WMNY managed the discarded sharps as regulated medical waste (RMW), even though household medical waste is not included in the definition of RMW and is therefore not subject to the regulations. According to a guidance document issued by the NYSDEC in February 1999, it is recommended that household medical waste that has been consolidated with other residential waste be packaged and managed as RMW, to minimize public exposure to the hazards associated with medical waste generated in the household (needle sticks, spill fluid containers, etc). A copy of the guidance letter is attached for your reference.

For similar incidents in the future, that involve known household medical waste, WMNY will implement the same procedures, and manage the material as RMW, to protect our employees and the general public from the hazards associated with the material. The procedures will include ceasing operations, securing the area, notifying the DEC, and contracting with a permitted hauler to have the material removed. It is the practice of WMNY not to perform any sorting or packaging activities. An approved environmental clean-up company performs such activities.

WMNY requests that the NYSDEC to either please confirm in writing that the procedures employed by WMNY, as described above in the event of household medical waste, are required by the department, or to please outline a specific alternative method for handling instances as those outlined above. Upon receiving the outlined management method for the household medical waste, it will be added as an amendment to the facility's Operation and Maintenance Manual.

If you require further clarification, or have additional comments, please contact me at 518-469-8944. Thank you.

Sincerely,

Ann Santell

WASTE LOAD INSPECTION REPORT

Inspector:_____ Date:_____ Time: _____

Vehicle Information

Owner: _____ Driver: _____

Identification Code: _____
Type of Vehicle: _____
Capacity of Vehicle: _____
Source of Waste: _____
Transport Permit: _____

Inspection Items	**Yes/No (if Yes, note quantity)**
Explosives, ammunitions, combustible liquid or gas cylinders and containers?	
Bottles, barrels, cylinders, or cans? Unopened containers, the contents of which cannot be readily identified by visual observation?	
Caustic acids, corrosives, chemicals, or other hazardous wastes prohibited by mandatory and binding laws or regulations of the United States Government and New York State?	
Liquid or slurry wastes?	
Tree trunks, stumps, branched, limbs or lumber over four inches in diameter or over five feet in length? Lawn or leaf debris including grass, branches, leaves, etc.?	
Waste electronic equipment, white goods (washers, dryers, refrigerators, etc.), or large amounts of other recyclables??	
Thick-walled or solid metallic objects such as castings, forgings, gas cylinders or large motors?	
Septage?	
Animal wastes or parts of animals (excluding normal household garbage)?	
Vapors, liquids or unusual odors coming from the vehicle?	
Automotive or large size tires?	
Any material classified was Infectious Hazardous Wastes, (Contaminated hypodermic needles, syringes, broken glass, and scalpel blades; isolation wastes, cultures and stocks from hospitals and laboratories; human blood and blood products)?	
Asbestos waste?	

If "Y" was answered for any of the above items, a decision must be made by the supervisor to accept or reject the load. If the load is rejected, the waste must be segregated and contingency actions initiated. The waste is to be removed from the site by the vehicle owner at no cost to WMNY.

THE PREFERRED CHOICE FOR OPERATOR OF PORTS, RAIL YARDS AND TRUCK TERMINALS

GIVING YOU THE LEADERSHIP EDGE

At any given moment, at port, terminals and distribution centers around the world, there is a Capacity Terminal Tractor taking command of a job.

For more than 40 years, we have earned the reputation for being a leader in design and durability because of our relentless pursuit to keep pushing the cargo industry forward. And while our name is synonymous with powerful terminal tractors, it's our high level of design and unique expertise that truly sets us apart.

WAREHOUSE

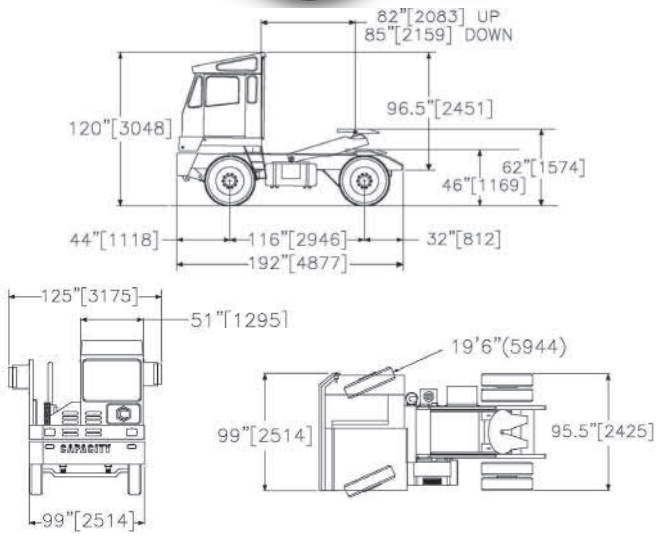

INTERMODAL

PORT

TJ5000

BUILT TO OUTPERFORM + OUTLAST THE COMPETITION

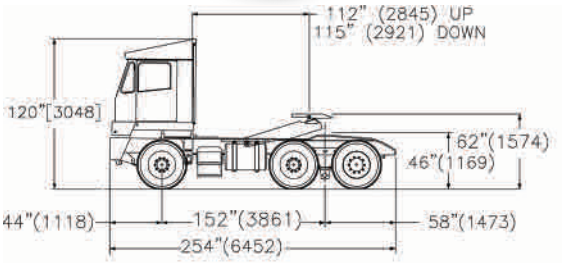

- The Capacity 5000 Series are comfortable, functional tractors, which include off-highway and DOT Certified models

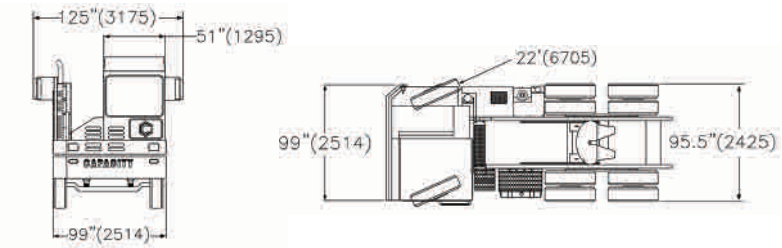

- The off-highway model is designed to move trailers within the facility around warehousing industries. With its 30,000 lb. rear axle, this unit is perfect for light manufacturing and warehousing/distribution applications. It has a GCW of 81,000 lbs. and gradeability of 81,000 lbs. at 22% grade.

- The TJ5000 DOT Certified unit is built with a highway package that includes a variety of street legal features offering superior versatility.

TJ6500

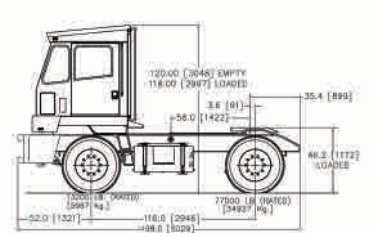

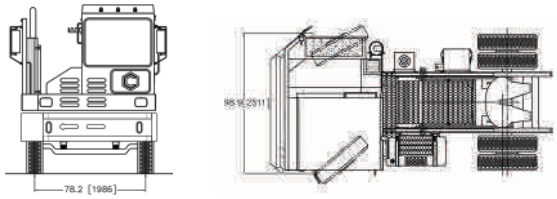

A SERIOUS WORKHORSE THAT GETS THE JOB DONE

- This tandem axle unit is available in both DOT and off-highway versions and has a GCW of 125,000 lbs. with gradeability of 90,000 lbs. at 17% grade.
- The TJ6500 Tandem DOT is ideal for a variety of applications where over-the-road use is required.

TJ9000

THE MOTHER OF PURE MUSCLE

- With its 70,400 lb. planetary axle, this unit is perfect for those extra heavy-duty applications. It has a GCW of 100,000 lbs. at 21% grade. No job is too demanding.

POWERFUL INNOVATIONS INCLUDED

Take one look at a Capacity Terminal Tractor and you'll immediately see why we stand out from the competition. Our high strength, single-piece structural steel is designed to meet your most challenging moves. Our ground-breaking DURA-RIDE® system is the talk of the industry – engineered to provide comfort and safety to the operator while reducing stress and maintenance cost to the tractor.

Forward 1	8.1 km/h	5 mph
Forward 2	14.6 km/h	9.1 mph
Forward 3	25.5 km/h	15.8 mph
Forward 4	43.2 km/h	26.8 mph
Reverse 1	8.1 km/h	5 mph
Reverse 2	14.6 km/h	9.1 mph
Reverse 3	25.5 km/h	15.8 mph

- Maximum travel speeds with empty bucket and 20.5-R25 tires.

Hydraulic System

Steering System Pump Type	Piston	
Hydraulic Cycle Time – Raise	5.4 Seconds	
Hydraulic Cycle Time – Dump	1.4 Seconds	
Hydraulic Cycle Time – Lower, Empty, Float Down	2.7 Seconds	
Hydraulic Cycle Time – Total	9.5 Seconds	
Pilot System – Pump Output	295 L/min	77.9 gal/min

- Implement System (Standard), Piston Pump – Rated at 2,100 rpm and 1,000 psi (6900 kPa).
- Cycle time with rated payload.

Brakes

Brakes	Meets required standards

- Meet OSHA, SAE J1473 Oct90 and ISO 3450-1985 standards.

Axles

Front	Fixed front	
Rear	Oscillating ±12°	
Maximum Single-Wheel Rise and Fall	420 mm	17 in

Tires

Tires	Choose from a variety of tires to match your application.

- Choice of:
  - 20.5R25 XTLA L2 Radial
  - 20.5R25 XHA L3 Radial
  - 20.5R25 GP2B L3 Radial
  - 20.5R25 HRL L3 Radial
  - 20.5R25 RL-2+ L3 Radial
  - 650/65R-25 XLD L3 Radial (Low Profile)
  - 20.5-25 SRG LD L3 Bias (16 PLY)
  - 20.5-25 SRG LD L3 Bias (20 PLY)
  - 20.5-25 RM 99 L3 Bias
- NOTE: In certain applications (such as load and carry) the loader's productive capabilities might exceed the tires' tonnes-km/h (ton-mph) capabilities. Caterpillar recommends that you consult a tire supplier to evaluate all conditions before selecting a tire model. Other special tires are available on request.

Cab

ROPS/FOPS	Meets SAE and ISO standards

- Caterpillar cab with Integrated Rollover Protective Structure (ROPS) is standard in North America and Europe.
- ROPS meets SAE J1040 APR88 and ISO 3471:1994 criteria.
- Falling Objects Protective Structure (FOPS) meets SAE J231 Jan81 and ISO 3449:1992 Level II criteria.
- The operator sound pressure level measured according to the procedures specified in ISO 6394:1998 is 75 dB(A) for the cab offered by Caterpillar when properly installed and maintained and tested with the doors and windows closed.
- Hearing protection may be needed when operating with an open operator station and cab (when not properly maintained or doors/windows open) for extended periods or in noisy environment.
- The sound power level is 108 dB(A) measured according to the dynamic test procedure and conditions specified in ISO 6395:1998 for a standard machine configuration.

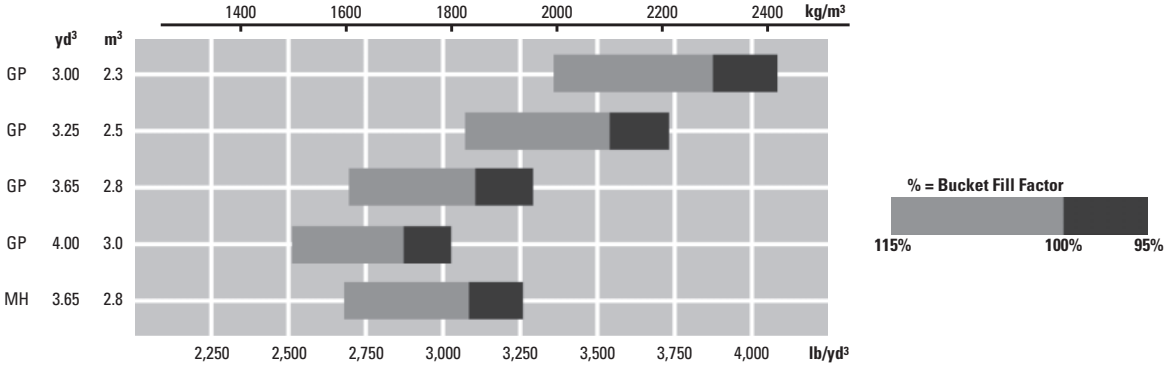

Service Refill Capacities

Fuel Tank – Standard	247 L	65.3 gal
Cooling System	36 L	9.5 gal
Crankcase	17.4 L	4.6 gal
Transmission	43 L	11.4 gal
Differentials and Final Drives – Front	57 L	15.1 gal
Differentials and Final Drives – Rear	53 L	14 gal
Hydraulic Tank	89 L	23.5 gal

Dimensions

All dimensions are approximate and may vary with work tool.

Tires are 20.5R25 Michelin XHA.

1	Height to top of ROPS	3356 mm	11'0"
2	Height to top of exhaust pipe	3099 mm	10'2"
3	Height to top of hood	2415 mm	7'11"
4	Ground clearance/Standard tire See Chart below for other tires	397 mm	1'3"
5	Lift arm clearance @ maximum lift	3435 mm	11'3"
6	Bucket pin height @ maximum lift	3843 mm	12'7"
	Bucket pin height, optional high lift	4266 mm	13'11"
7	Overall height – bucket raised	5284 mm	17'4"
8	Center line of rear axle to edge of counterweight	1869 mm	6'1"
9	Wheelbase	3020 mm	9'10"
10	Height to center line of axle	688 mm	2'3"
11	Center line of rear axle to hitch	1510 mm	4'11"
12	Rack back @ maximum lift	65°	
13	Dump angle @ maximum lift	50°	
14	Rack back @ carry	50°	
15	Rack back @ ground	42°	
16	Dump clearance @ maximum lift and 45° dump	2771 mm	9'1"

Standard Equipment

Standard equipment may vary. Consult your Caterpillar dealer for details.

ELECTRICAL
- Alarm, back-up, adjustable
- Alternator, 24V/65A
- Battery disconnect switch with removable key
- Lighting:
  - Turn signals with flashing hazard function
  - Two halogen headlights with high/low beam
  - Parking lights
  - LED brake and tail lights
  - Two front and rear halogen work lights, cab mounted
- Jumpstart receptacle

OPERATOR ENVIRONMENT
- Air Conditioning
- Bucket/Work tool lever lockout feature
- Cab, ROPS/FOPS, pressurized and sound suppressed
- Coat hook
- Controls, lift and tilt functions
- Radio ready including antenna, speakers, two 12V/5A power outlets, includes cigar lighter
- Electric horn, dual actuation (steering wheel, implement pod)
- Sun Visor, Front
- Cab heating with fresh air inlet and defrosting function
- Messenger System
  - Monitoring and logging of machine data
  - Clock
  - Operator keypad
  - Axle oil temperature
- Product Link Ready (optional in some regions)
- Operator display, Gauges:
  - Engine coolant temperature
  - Fuel level
  - Hydraulic oil temperature
  - Speedometer
  - Gear indicator
  - Tachometer
  - Transmission oil temperature
- Operator display, Warning Indicators:
  - Glow Plugs
  - Electrical, alternator output
  - Engine inlet manifold temperature
  - Engine oil pressure
  - Fuel pressure
  - Hydraulic oil temperature
  - Parking brake
  - Primary steering oil pressure
  - Service brake oil pressure
  - Transmission filter bypass
  - Axle oil temperature
- Dual interior rearview mirrors
- Dual exterior rearview mirrors
- Interior operator lighting
- Storage compartments
- Lunchbox compartments
- Beverage holder
- Seat, KAB, cloth, adjustable
- Seat belt, retractable, 51 mm (2") wide
- Adjustable steering column/wheel
- Forward/Neutral/Reverse switch by implement controls
- LH door with sliding window
- RH sliding window and emergency exit
- Windshield wipers, front and rear
- Interval function for front and rear wipers
- Windshield washers, front and rear

POWER TRAIN
- Brakes, full hydraulic enclosed wet-disc
- Brake wear indicators with Integrated Braking System (IBS)
- Front axle with locking differential
- Drive line, extreme service
- Engine, Cat C6.6 ACERT and ATAAC technology, electronically controlled.
- Fan, radiator, electronically controlled, hydraulically driven, temperature sensing, on demand.
- Filters, fuel, primary/secondary
- Fuel priming pump (Electric)
- Fuel/Water separator
- Monitoring System, Axle Oil Temp.
- Muffler, sound suppressed
- Radiator, unit core (6 fpi) with ATAAC
- Starting aid (Glow Plugs)
- Trans, neutralizer lockout in messenger
- Torque converter
- Transmission, countershaft, automatic power shift (4F/3R)
- Variable Shift Control (VSC), messenger

Standard Equipment (cont'd)

Standard equipment may vary. Consult your Caterpillar dealer for details.

OTHER STANDARD EQUIPMENT
- Automatic bucket positioner
- Counterweight
- Couplings, Caterpillar O-ring face seal
- Fenders, Extension, Platform, Rear
- Guards, (bottom crankcase and fuel tank)
- Hitch, drawbar with pin
- Hood, non-metallic power tilting
- Hoses, Caterpillar XT
- Hydraulics, Load Sensing
- Kickout, lift, automatic
- Kickout, tilt, adjustable
- Linkage, Z-bar, cast crosstube/tilt lever
- Oil sampling valves
- Remote Diagnostic Pressure Taps.
- Sight Gauges: Engine coolant, hydraulic oil and transmission oil level.
- Steering, load sensing
- Vandalism protection caplocks

HYDRAULICS
- Load sensing implement system, pressure sensing
- Load sensing steering system
- Two function hydraulic valve (lift and tilt)
- Two lever operator implement controls

TIRES, RIMS, & WHEELS
- A tire must be selected from the mandatory attachments section. Base machine price includes an allowance based on a premium radial tire.

ANTIFREEZE
- Premixed 50% concentration of Extended Life Coolant with freeze protection to –34° C (–29° F).

320G / 324G SPECIFICATIONS

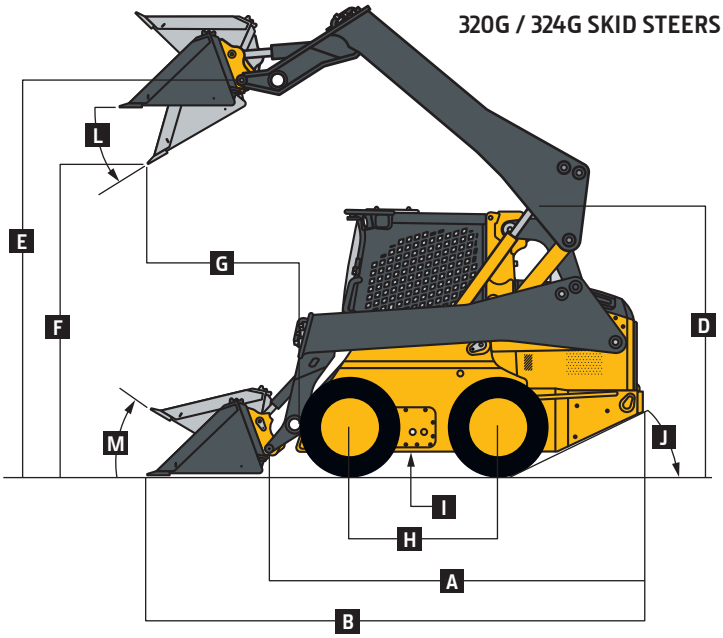

Engine	320G		324G	
Manufacturer and Model	Yanmar 4TNV98C (optional 4TNV98CT)	Yanmar 4TNV98T	Yanmar 4TNV98CT	Yanmar 4TNV98T
Non-Road Emission Standard	EPA Final Tier 4/ EU Stage IV	EPA Interim Tier 4/ EU Stage IIIA	EPA Final Tier 4/ EU Stage IV	EPA Interim Tier 4/ EU Stage IIIA
Cylinders	4	4	4	4
Gross Rated Power (ISO 14396)	51.7 kW (69 hp) at 2,500 rpm		55.0 kW (74 hp) at 2,500 rpm	
Net Peak Power (SAE J1349 / ISO 9249)	49.4 kW (66 hp) at 2,500 rpm		52.5 kW (70 hp) at 2,500 rpm	52.7 kW (71 hp) at 2,500 rpm
Peak Torque	241 Nm (178 lb.-ft.) at 1,625 rpm		280 Nm (207 ft.-lb.) at 1,800 rpm	284 Nm (209 ft.-lb.) at 1,800 rpm
Displacement	3.3 L (203 cu. in.)	3.3 L (203 cu. in.)	3.3 L (203 cu. in.)	3.3 L (203 cu. in.)
Rated Engine Speed	2,500 rpm	2,500 rpm	2,500 rpm	2,500 rpm
Torque Rise	22% at 1,625 rpm	22% at 1,625 rpm	34% at 1,800 rpm	36% at 1,800 rpm
Aspiration	Naturally aspirated (optional turbocharger)	Turbocharged	Turbocharged	Turbocharged
Air Cleaner	Dry dual element	Dry dual element	Dry dual element	Dry dual element
Cooling	**320G / 324G**			
Fan Type	Variable-speed hydraulic drive standard / reversing fan drive optional			
Powertrain				
Type	Hydrostatic-manual or electrohydraulic; 4 – 80 heavy-duty (HD) continuous-loop chain			
Travel Speeds				
Single Speed, Standard	11.1 km/h (6.9 mph)			
2 Speed, High, Optional	17.9 km/h (11.1 mph)			
Axles	Induction-hardened, 1-piece forged axle shafts with maintenance-free oil-bath lubrication of inner and outer axle bearings			
Maximum Axle Torque	6771 Nm (4,994 lb.-ft.)			
Tractive Effort	3220 kgf (7,491 lbf)			
Final Drive	High-strength, adjustment-free chains			
Brakes	Integral, automatic, spring-applied, hydraulically released, wet-disc park brake			
Hydraulics	**320G**		**324G**	
Pump Flow				
Standard	78 L/m (21 gpm)		78 L/m (21 gpm)	
Total with High-Flow Option	112 L/m (30 gpm)		120 L/m (32 gpm)	
System Pressure at Couplers	22 408 kPa (3,250 psi)		23 787 kPa (3,450 psi)	
Hydraulic Horsepower Flow (calculated)				
Standard	29 kW (39 hp)		31 kW (42 hp)	
High Flow	42 kW (56 hp)		47 kW (64 hp)	
Auxiliary Hydraulics	Connect-under-pressure with flat-faced couplers		Connect-under-pressure with flat-faced couplers	
Cylinders	**320G / 324G**			
Type	John Deere heat-treated, chrome-plated polished cylinder rods, hardened steel (replaceable bushings) pivot pins			
Electrical				
Voltage	12 volt			
Battery Capacity	750 CCA standard / 925 CCA optional			
Alternator Rating	75 amp			
Lights	Halogen: 2 front and 1 rear standard / deluxe LED (4 front and 1 rear) optional			
Operator's Station				
ROPS (ISO 3471) / FOPS (ISO 3449) structure with quick-pivot standard				
Tires/Wheels				
Standard Tire Size	12 x 16.5 12 PR SKS			
Serviceability

PRODUCT SPECIFICATIONS FOR 323

ENGINE

Engine Power - ISO 9249	162.0 HP
Engine Model	Cat C7.1
Engine Power - ISO 14396	164.0 HP
Bore	4.0 in
Stroke	5.0 in
Displacement	428.0 in³

HYDRAULIC SYSTEM

Main System - Maximum Flow	429 l/min (113 gal/min)
Maximum Pressure - Equipment	5075.0 psi
Maximum Pressure - Travel	4974.0 psi
Maximum Pressure - Swing	3988.0 psi

SWING MECHANISM

Swing Speed	11.25 r/min
Maximum Swing Torque	60300.0 ft·lbf

WEIGHTS

Operating Weight	56200.0 lb

SERVICE REFILL CAPACITIES

Fuel Tank Capacity	86.6 gal (US)
Cooling System	6.6 gal (US)
Engine Oil	6.6 gal (US)
Swing Drive - Each	3.2 gal (US)
Final Drive - Each	1.3 gal (US)
Hydraulic System - Including Tank	61.8 gal (US)
Hydraulic Tank	30.4 gal (US)
DEF Tank	10.8 gal (US)

DIMENSIONS

Boom	Reach 5.7 m (18'8")
Stick	Reach 2.9 m (9'6")
Bucket	HD 1.19 m^3 (1.56 yd^3)
Shipping Height - Top of Cab	9.9 ft
Handrail Height	9.8 ft
Shipping Length	31.3 ft
Tail Swing Radius	9.3 ft
Counterweight Clearance	1.7 ft
Ground Clearance	1.7 ft
Track Length	14.7 ft
Length to Center of Rollers	12.0 ft
Track Gauge	7.9 ft
Transport Width	9.9 ft

WORKING RANGES & FORCES

Maximum Digging Depth	22.1 ft
Boom	Reach 5.7 m (18'8")
Stick	Reach 2.9 m (9'6")
Bucket	HD 1.19 m³ (1.56 yd³)
Maximum Reach at Ground Level	32.4 ft
Maximum Cutting Height	31.0 ft
Maximum Loading Height	21.3 ft
Minimum Loading Height	7.1 ft
Maximum Depth Cut for 2440 mm (8 ft) Level Bottom	21.6 ft
Maximum Vertical Wall Digging Depth	18.8 ft
Bucket Digging Force - ISO	38811.0 lbf
Stick Digging Force - ISO	23911.0 lbf

323 STANDARD EQUIPMENT

CAT TECHNOLOGY

- Cat GRADE with 2D
- Cat Assist (Boom Assist, Bucket Assist, Swing Assist, Grade Assist)
- Cat Payload (Cat Payload, Static Weigh, Auto-Calibration)
- 2D E-fence
- Cat Product Link™

ENGINE

- Cat C7.1 electronically-controlled turbo-charged Tier 4 Final diesel engine
- Meets U.S. EPA Tier 4 Final and EU Stage IV emissions standards.
- Three selectable power modes
- One-touch low idle with automatic engine speed control

Automatic engine idle shutdown

Recommended for use up to 4500 m altitude (14,764 ft) with engine power derate above 3000 m (9,842.5 ft).

46° C (115° F) high-ambient cooling capacity

Cold starting capability for - 32° C (- 25° F)

Double element air filter with integrated pre-cleaner

Electric fuel priming pump

Reversible electric cooling fans

Biodiesel capability up to B20

HYDRAULIC SYSTEM

Boom and stick regeneration circuits

Electronic main control valve

Auto warm up

Automatic two-speed travel

Boom and stick drift reduction valve

Element type main hydraulic filter

Slider joysticks

Electronic main pump

Electric refueling pump (Europe only)

STANDARD DELUXE CAB

ROPS, standard sound suppression

High-resolution 8" (203 mm) LCD touchscreen monitor

Automatic Bi-level air conditioner

Jog dial and shortcut keys for monitor control

Keyless push-to-start engine control

Height-adjustable console, inifinite with no tool

Air-adjustable seat suspension

Seat belt, retractable (51 mm [2 "] width)

Seat Heater

Tilt-up left side console

Bluetooth® integrated radio with USB ports

12V DC outlets

Document storage

Cup and bottle holders

Two-piece front window, openable

Upper Radial wiper with 70/30 w/washer

LED dome and lower interior lights

Roller front sunscreen

Beacon ready

Washable floor mat

Polycarbonate skylight hatch, openable

UNDERCARRIAGE AND STRUCTURES

Tiedown points on base frame (ISO 15818 Compliant)

Segmented track guiding guards

Standard bottom guards

Standard travel motor guards

Grease lubricated track links

Standard swivel guard for demolition

Final drive with standard travel motor

5400 kg (11,900 lb) counterweight for demolition

HD swing frame for 5400 kg counterweight

HD swing bearing for 5400 kg counterweight

HD base frame with SD track rollers and standard carrier rollers for 5400kg counterweight

BOOM, STICKS AND LINKAGES

5.7 m (18'8") reach boom

2.9 m (9'6 ") stick

600 mm (24 ") triple grouser track shoes

Bucket Linkage, B1-family w/ lifting Eye

ELECTRICAL

Machine electronic control module (x2)

1000 CCA maintenance-free batteries (x2)

Centralized electrical disconnect switch

Programmable time-delay LED working lights

LED chassis light, LH & RH boom lights for reach, Cab lights-850 Lumens

SAFETY & SECURITY

Rearview camera and side RH mirror

Neutral lever (lock out) for all controls

Anti-skid plate and countersunk bolts on service platform

Ground-level accessible secondary engine shutoff switch in cab

Bluetooth receiver

RH hand rail and hand hold (ISO 2867 compliant)

Travel alarm (US only)

SERVICE & MAINTENANCE

Sampling ports for Scheduled Oil Sampling (S·O·S℠)

Grouped location for engine oil and fuel filters

Ground level 2nd dipstick for engine oil

Remote flash

323 OPTIONAL EQUIPMENT

CAT TECHNOLOGY

Cat GRADE with Advanced 2D

Cat GRADE with 3D

ENGINE

52° C (125° F) high-ambient cooling capacity

HYDRAULIC SYSTEM

- Hammer return filter circuit
- Combined flow/high pressure aux circuit
- Medium pressure aux circuit
- Quick coupler circuit for Cat Pin Grabber
- Boom /Stick lowering check valves (BLCV/SLCV)
- Heavy lift configuration

UNDERCARRIAGE AND GUARDS

- Heavy-Duty bottom guard for demolition
- Standard swivel guard for demolition
- Heavy-Duty travel motor guards for demolition
- 4200 kg (9,260 lb) counterweight
- Semi-HD swing frame for 4200 kg counterweight
- Standard Swing bearing for 4200 kg counterweight
- Base frame with HD track rollers and standard carrier rollers for 4200 kg counterweight
- Track guiding guard, full length
- SD base frame w/ SD track rollers & SD carrier rollers

BOOM,STICKS & LINKAGES

- 600 mm (24") single grouser track shoes
- 700 mm (28 ") triple grouser HD track shoes
- 790 mm (31 ") triple grouser HD track shoes
- 900 mm (35") triple grouser HD track shoes
- 5.7 m (18'8") HD reach boom +2.9 m (9'6") HD stick for demolition
- VA boom (2.8m (9'2") stub + 3.3m (10'10") fore) - Europe only
- Bucket linkage, B1-family with lifting eye
- Bucket linkage , B1-family without power link with Lifting Eye (Europe only)
- Power link kit , B1-family with lifting Eye (Europe only)

ELECTRICAL SYSTEM

1000 CCA maintenance-free batteries (x4) for cold starting capability -32C°

LED chassis light, LH & RH boom lights ,cab lights w/ cover and rain protector - 850 lumens, for use with 360° visibility

LED chassis light, LH & RH boom lights for VAB, cab lights - 850 lumens (Europe only)

LED chassis light, LH & RH boom lights for VAB, cab lights w/ cover and rain protector - 850 lumens, for use with 360° visibility (Europe only)

SERVICE & MAINTENANCE

Preventative maintenance ready (Quick-Evac)

SAFETY & SECURITY

360° visibility

Radiator screen

Right hand side mirror (Europe only)

Rearview and right hand sideview camera

PREMIUM CAB UPGRADES, STANDARD PLUS

ROPS, advanced sound suppression

High resolution 10" (254 mm) LCD touch screen monitor (only for use with 360° visibility).

High resolution 10" (254 mm) LCD touch screen monitor + additional monitor (only for use with 360° visibility and Cat Grade with Advanced 2D or Cat Grade with 3D).

Seat ventilator

Parallel wiper with lower parallel w/wisher

Roller rear sunscreen

Rain protector and cab light covers (only for use with 360° visibility).

BUCKET

Heavy duty buckets 1.19m^3 (1.56yd^3), 1.3m^3 (1.71yd^3), 1.38m^3 (1.81 yd^3)

Appendix D

Closure Cost Estimate

Waste Management of NY, LLC
Port of Albany Transfer Station and Recycling Facility
Albany, NY

Facility Closure Cost Estimate[1]

ITEM						COST
1. Material Disposal						**$107,856.00**
Load-out, transportation, and disposal of 1,498 tons of material inventory						
(storage of one day of maximum throughput plus an additional day of maximum throughput)						
	1,498	tons	@	$72	/ton =	$107,856
					Total Disposal Cost =	$107,856.00
2. Facility Closure						**$12,250.00**
-Facility floor pressure wash with collection of washwater						
-Pumping and disposal of 4,000 gallons of leachate						
3. Closure Certification Report by NYS Licensed PE						**$2,850.00**
- Work continuously monitored by construction inspector from PE's firm, direct report to PE						
	16	hours @		$85	/hr =	$1,360
- Site visit and final inspection by PE	1	hours PE @		$175	/hr	$175
- Closure Documentation by PE's firm	1	hour PE @		$175	/hr	$175
	8	hour Eng. 1 @		$110	/hr	$880
	1	hour Staff @		$60	/hr	$60
- Travel, Materials Postage, etc.						$200
					Subtotal =	$2,850
4. Miscellaneous/Contingency (10% of above subtotal)						**$12,295.60**
					Grand Total	**$135,251.60**

1 - All costs are estimated third-party costs and in present worth dollar. Cost estimates are based on WMNY operating experience and B&L engineering experience in retaining third-party contractors and commercial services for similar work. Facility Closure cost based on contractor estimate adjusted for inflation per the U.S. Bureau of Labor Statistics Inflation Calculator.

Oil Discharge Reporting Requirements

How to Report Oil Discharges to the National Response Center and EPA

If a facility or vessel discharges oil to navigable waters or adjoining shorelines, waters of the contiguous zone, or in connection with activities under the Outer Continental Shelf Lands Act or Deepwater Port Act of 1974, or which may affect natural resources under exclusive U.S. authority, the owner/operator is required to follow certain federal reporting requirements. These requirements are found in two EPA regulations – 40 CFR part 110, Discharge of Oil regulation, and 40 CFR part 112, Oil Pollution Prevention regulation. The Discharge of Oil regulation provides the framework for determining whether an oil discharge to inland and coastal waters or adjoining shorelines should be reported to the National Response Center. The Oil Pollution Prevention regulation, part of which is commonly referred to as the "SPCC rule," identifies certain types of discharges from regulated facilities that also need to be reported to EPA. Although these reporting requirements were not changed by EPA's recent modifications of the SPCC rule, this Fact Sheet will help facilities with the Reportable Discharge History criterion associated with the qualified facility option and the oil-filled operational equipment option offered in the recent SPCC modifications.

Who is subject to the Discharge of Oil regulation?

Any person in charge of a vessel or of an onshore or offshore facility is subject to the reporting requirements of the Discharge of Oil regulation if it discharges a harmful quantity of oil to U.S. navigable waters, adjoining shorelines, or the contiguous zone, or in connection with activities under the Outer Continental Shelf Lands Act or Deepwater Port Act of 1974, or which may affect natural resources under exclusive U.S. authority.

What is a "harmful quantity" of discharged oil?

A harmful quantity is any quantity of discharged oil that violates state water quality standards, causes a film or sheen on the water's surface, or leaves sludge or emulsion beneath the surface. For this reason, the Discharge of Oil regulation is commonly known as the "sheen" rule. Note that a floating sheen alone is not the only quantity that triggers the reporting requirements (e.g., sludge or emulsion deposited below the surface of the water may also be reportable).

Under this regulation, reporting oil discharges does not depend on the specific amount of oil discharged, but instead can be triggered by the presence of a visible sheen created by the discharged oil or the other criteria described above.

To whom do I report an oil discharge?

A facility should report discharges to the National Response Center (NRC) at 1-800-424-8802 or 1-202-426-2675. The NRC is the federal government's centralized reporting center, which is staffed 24 hours per day by U.S. Coast Guard personnel.

If reporting directly to NRC is not practicable, reports also can be made to the EPA regional office or the U.S. Coast Guard Marine Safety Office (MSO) in the area where the incident occurred.

When must I report to NRC?

Any person in charge of a vessel or an onshore or offshore facility must notify NRC immediately after he or she has knowledge of the discharge.

What information do I need to report?

NRC will ask a caller to provide as much information about the incident as possible including:

- Name, organization, and telephone number
- Name and address of the party responsible for the incident
- Date and time of the incident
- Location of the incident
- Source and cause of the discharge
- Types of material(s) discharged
- Quantity of materials discharged
- Danger or threat posed by the discharge

- Number and types of injuries (if any)
- Weather conditions at the incident location
- Other information to help emergency personnel respond to the incident

How are reports to NRC handled?

NRC relays information to an EPA or U.S. Coast Guard On Scene Coordinator (OSC), depending on the location of the incident. After receiving a report, the OSC evaluates the situation and decides if federal emergency response action is necessary.

If I report a discharge to NRC, do I also report to EPA?

If a facility is regulated under the SPCC rule and has a reportable discharge according to EPA regulations (see below), it must be reported to both NRC and EPA.

What are the oil discharge reporting requirements in the SPCC rule?

Any facility owner/operator who is subject to the SPCC rule must comply with the reporting requirements found in §112.4.

A discharge must be reported to the EPA Regional Administrator (RA) when there is a discharge of:

- More than 1,000 U.S. gallons of oil in a single discharge to navigable waters or adjoining shorelines
- More than 42 U.S. gallons of oil in each of two discharges to navigable waters or adjoining shorelines occurring within any twelve-month period

When determining the applicability of this SPCC reporting requirement, the gallon amount(s) specified (either 1,000 or 42) refers to the amount of oil that actually reaches navigable waters or adjoining shorelines, not the total amount of oil spilled.

What do I need to submit to EPA?

The owner/operator must provide the following:

- Name and location of the facility
- Owner/operator name
- Maximum storage/handling capacity of the facility and normal daily throughput
- Corrective actions and countermeasures taken, including descriptions of equipment repairs and replacements
- Adequate description of the facility, including maps, flow diagrams, and topographical maps, as necessary
- Cause of the discharge to navigable waters, including a failure analysis
- Failure analysis of the system where the discharge occurred
- Additional preventive measures taken or planned to take to minimize discharge reoccurrence
- Other information the RA may reasonably require

An owner/operator must also send a copy of this information to the agency or agencies in charge of oil pollution control activities in the state in which the facility is located.

What happens after a facility submits this information to EPA?

The EPA Regional Administrator will review the information submitted by the facility and may require a facility to submit and amend its SPCC Plan. Facilities and equipment that qualified for the new streamlined requirements may lose eligibility for those options as determined by the Regional Administrator. A state agency may also make recommendations to EPA for a facility to amend its Plan to prevent or control oil discharges.

1.0 Introduction

This Operating Noise Impact Assessment is submitted on behalf of Waste Management of New York, LLC (WMNY) to the New York State Department of Environmental Conservation (NYSDEC) in support of the proposed permit modification for the WMNY Port of Albany Transfer Station located in Albany, New York. The purpose of this noise impact assessment is to evaluate the potential operational noise impacts from a proposed NYSDEC Part 360 permit modification for the existing Port of Albany Transfer Station (herein referred to as "the facility") in accordance with NYSDEC solid waste facility regulations and noise assessment guidance. This assessment evaluates the potential noise impacts from sound generated by existing sources operating at the facility in order to determine future worst-case facility operational source noise levels anticipated as a result of the proposed permit modification.

This noise impact assessment consisted of collecting sound level measurement data at two locations surrounding the facility during typical daily operations to establish the existing peak-hour operational sound levels for the facility and to predict the future peak-hour operational sounds levels following the proposed permit modification. This data was utilized to assess potential noise impacts at offsite sensitive receptors resulting from the permit modification under SEQRA, including using the noise impact assessment procedures provided in the NYSDEC Program Policy *DEP-00-1 Assessing and Mitigating Noise Impacts* (NYSDEC, 2001).

2.0 Site and Project Description

The Port of Albany Transfer Station is located on approximately 3.1 acres at 100 Boat Street in the central portion of the Port of Albany, City of Albany, Albany County, New York (see Figure 1). The facility is owned and operated by Waste Management of New York, LLC.

2.1 Site Description

The facility is located in an industrial/commercial area within the Port of Albany. The facility is bordered to the north by a wastewater treatment facility, oil terminal and commercial/industrial properties. The facility is bordered to the east by additional commercial/industrial properties, and beyond, the Hudson River with docking areas within the Port. To the south of the facility is an industrial/commercial building, and beyond which is a scrap yard. To the west the facility is bordered by soil/mulch processing facility which operates from spring to fall, and a main rail line with multiple rail tracks. Beyond the rail line at approximately 1,000 feet to the northwest is located the closest residential property to the transfer station facility. This property is part of a residential housing development located on South Pearl Street.

The facility consists of a fully enclosed steel building that has been and is used for commercial waste, C&D waste, and source separated recyclables transfer operations. Waste haul trucks enter the facility from the northeast and are directed to the scale adjacent to the Transfer Station Building before entering the building and the transfer station processing area through overhead doors. The loads are tipped directly onto the concrete tip floor within the building. Tipped waste is transferred from the tip floor using an excavator or front end loader and placed into open top transfer trailers on the tip floor. All loading occurs within the building. Loaded transfer trailers are then removed from the building, staged in the yard and covered. Transfer trailers containing solid waste are then hauled to a permitted landfill.

The facility typically operates Monday-Saturday, from 6 a.m. to 5 p.m. Commercial waste haul trucks start unloading during the 6 a.m. to 7 a.m. hour, and the facility is open to accept materials from the general public starting at 7 a.m. With the exception of the trucks entering and exiting the site, and the movement of the loaded transfer trailers, all waste activities typically take place within the enclosed Transfer Station Building which provides noise attenuation by design. Noise levels from truck traffic movement onsite is relatively low-level, as the trucks travel at low speeds while on the property because of site constraints which generally limit speeds to 10 mph or less; including vehicle turning movements and the small site footprint.

2.2 Project Description

The site has historically operated as a transfer facility since the late 1980s and is currently permitted to receive, handle and process 749 tons per day (tpd) of dry commercial wastes, construction and demolition (C&D) debris, and source-separated recyclables. WMNY proposes to accept MSW in addition to the current materials at the Port of Albany transfer facility with no

change to the currently permitted limit of 749 tpd. As described herein, noise from transfer facility operations is not anticipated to materially change as a result of the proposed modification. Based on the traffic analysis completed for the project (Traffic Analysis Report, B&L, November 2020), there will be no increase in the number of permitted truck trips (28 per hour during the peak hour per the traffic analysis) expected with the proposed permit modification. However, for the purpose of this noise assessment, current typical peak-hour truck trips and operations (current waste acceptance rates have been less than the permitted rate) were compared to future predicted peak-hour truck trips and operations as a result of the proposed permit modification. This noise assessment evaluates the current typical peak-hour conditions, current peak-hour conditions and proposed peak-hour conditions with regards to the number of trucks trips to the facility to determine the effect on sound levels generated from facility operations.

There is no anticipated change in noise generated from waste processing operations due to the change in the type of waste accepted at the facility. The MSW will be handled with the same type and number of pieces of equipment as current operations. This equipment will be operating within the transfer station structure, with the facility doors normally closed. The proposed project includes the installation of high speed doors that will normally be closed. It should be noted that the doors were open during the sound level measurements.

3.0 Noise Fundamentals

Noise is generally defined as unwanted, or intruding, sound in and around our environment. The degree of disturbance or annoyance of an intruding sound depends on various factors including the magnitude and nature of the intruding sound, the magnitude of the background or pre-development ambient sound levels present without the intruding sound, and the nature of the activity of people in the area where the noise is heard. As this *Operating Noise Impact Assessment* is assessing potential noise, or unwanted sound impacts, the terms "noise" and "sound" within this assessment may be used interchangeably.

The magnitude, or loudness, of sound waves (pressure oscillations) is described quantitatively by the terms sound pressure level, sound level, or simply noise level. Sound waves contain energy in the form of pressure and are measured along a logarithmic scale in units called decibels (dB). Decibels are used to quantify sound pressure levels just as degrees are used to quantify temperature and inches are used to quantify distance. The faintest sound level that can be heard by a young healthy ear is about 0 dB, a moderate sound level is about 50 dB, and a loud sound level is about 100 dB. Examples of various common outdoor sound levels are listed below (Table 1 excerpted from NYSDEC DEP-00-1).

To evaluate noise impacts and report time-varying sound levels it is common practice to measure the equivalent steady-state sound level (Leq). The Leq is defined as the equivalent steady-state sound level which contains the same acoustic energy as the time varying sound level during a specific time period (typically a one-hour period). In other words, the Leq is a constant sound level that has the same total (equivalent) energy as a time-varying sound, taken over a specified time period and includes both high frequency sound levels and low frequency sound levels and the associated duration of those sound levels. The Leq sound level is used to assess the effects of noise on people, and is also useful in establishing the ambient sound levels at receptor locations.

Sound levels are measured using a standardized instrument called a sound level meter. Sound level meters are designed and constructed in accordance to meet standards established by the American National Standards Institute (ANSI). Sound levels are measured via "weighting networks" corresponding to varying sound frequencies. The A-weighted scale, measured as dBA, most closely approximates how the human ear responds to sound at various frequencies, and is typically used for community sound level measurements. A-weighted sound levels are the accepted method of determining what may or what may not be considered an impact to humans by the NYSDEC, the New York State Department of Transportation (NYSDOT), the Federal Highway Administration, and the United States Environmental Protection Agency (USEPA). Further, NYSDEC solid waste regulations 6 NYCRR Part 360 require that the A-weighting scale be used in determining compliance; therefore, the A-weighted scale has been used in this *Operating Noise Impact Assessment*.

Table 1
Common Noise Levels

Sound Source	dBA	Response Criteria
	150	
Carrier Deck Jet Operation	140	
	130	Painfully Loud Limit Amplified Speech
Jet Takeoff (200 feet) Discotheque Auto Horn (3 feet) Riveting Machine	120 110	Maximum Vocal Effort
Jet Takeoff (2000 feet) Shout (0.5 feet)	100	
N.Y. Subway Station Heavy Truck (50 feet)	90	Very Annoying Hearing Damage (8 hours, continuous exposure)
Pneumatic Drill (50 feet)	80	Annoying
Freight Train (50 feet) Freeway Traffic (50 feet)	70	Telephone Use Difficult Intrusive
Air Conditioning Unit (20 feet)	60	
Light Auto Traffic (50 feet)	50	Quiet
Living Room Bedroom	40	
Library Soft Whisper (15 feet)	30	Very Quiet
Broadcasting Studio	20	
	10	Just Audible
	0	Threshold of Hearing

3.1 Sound Levels Decrease Over Distance

In order to assess sound levels, it is also important to have an understanding of the way sound levels decrease (or attenuate) with distance. The decrease in sound level from any point sound source normally follows the "inverse square law." That is, the sound pressure changes in inverse proportion to the square of the distance from the sound source. At distances beginning at approximately 10 feet from a point sound source, every doubling of the distance produces a 6 dBA reduction in the sound for point sources such as air conditioners, compressors, a rock concert, or a rock crusher. Therefore, a sound level of 70 dBA at 50 feet would have a sound level of approximately 64 dBA at 100 feet. At 200 feet, sound from the same source would be perceived as having a sound level of approximately 58 dBA. When assessing a line sound source such as a moving traffic stream on a highway, the sound levels will decrease by approximately 3 dBA per distance doubling over hard surfaces such as water, asphalt, or concrete; and between 5 and 6 dBA per distance doubled over grass or other soft surfaces.

4.0 Noise Criteria

The following sections provide a description of the noise criteria that apply to the facility as part of this *Operating Noise Impact Assessment*. The criteria include 6 NYCRR Part 360.19(j) and NYSDEC Program Policy *DEP-00-1 Assessing and Mitigating Noise Impacts,* NYSDEC, 2001 (NYSDEC Noise Policy). 6 NYCRR Part 360 has specific noise level limits that apply to 6 NYCRR Part 360 solid waste permitted facilities, while NYSDEC DEP-00-1 establishes accepted noise level thresholds based on land use types, setting, sensitive receptor locations, and acceptable noise level increases at sensitive receptor locations resulting from a proposed action.

4.1 6 NYCRR Part 360 Regulations

The NYSDEC 6 NYCRR Part 360 regulations for Solid Waste Management Facilities regulate noise from solid waste management facilities. Part 360.19(j) regulates noise levels resulting from equipment or operations at these facilities. Part 360.19(j) states:

> *(j) The owner or operator of a facility must ensure that noise (other than that occurring during construction of the facility) resulting from equipment or operations at the facility does not exceed the following energy equivalent sound levels beyond the property line owned or controlled by the owner or operator of the facility at locations authorized for residential purposes:*

Character of Community within one-mile radius of facility	*Leq Energy Equivalent Sound Levels*	
	7 a.m. – 10 p.m.	*10 p.m. – 7 a.m.*
Rural	*57 dBA*	*47 dBA*
Suburban	*62 dBA*	*52 dBA*
Urban	*67 dBA*	*57 dBA*

> *The Leq is the equivalent steady-state sound level which contains the same acoustic energy as the time varying sound level during a one-hour period. It is not necessary that the measurements be taken over a full one-hour time interval, but sufficient measurements must be available to allow a valid extrapolation to a one-hour time interval. If the background sound level exceeds the referenced Leq sound level limit, the Leq sound levels from facility sources and background sources when combined must not exceed the Leq sound level of the background sources alone by more than three decibels (A).*

The facility is considered to be located in an urban area, and as such, the urban noise limits contained in 6 NYCRR 360.19(j) apply. The regulatory limit for sound from operations during daytime periods is an hourly equivalent (Leq) sound level of 67 dBA received beyond the facility property line in urban areas authorized for residential purposes. The limit for operations during nighttime periods between 10:00 p.m. and 7:00 a.m. is an hourly equivalent Leq sound level of

57 dBA beyond the facility property line in urban areas authorized for residential purposes. The sound level limits are focused on the property lines of the closest neighboring parcels that are authorized for residential uses. The site is bordered by industrial and commercial use facilities, and the nearest residential use property is located approximately 1,000 feet to the northwest. The site's current normal waste receiving hours occur Monday through Saturday from 6:00 a.m. to 5:00 p.m.; therefore, both the nighttime and daytime Part 360 noise limits are applicable. Commercial waste haul trucks start unloading during the 6 a.m. to 7 a.m. hour. The hours of operation upon which this review is based are not proposed to change.

In accordance with 6 NYCRR 360.19(j), the facility maintains appropriate mufflers on all internal combustion powered equipment used at the facility.

4.2 SEQRA Assessment

In addition to comparing sound levels to the 6 NYCRR Part 360 noise level limits, the facility was also evaluated for potential impacts pursuant to criteria developed by NYSDEC for purposes of environmental impact reviews under the State Environmental Quality Review Act (SEQRA) using the NYSDEC Noise Policy. Although this document is not an enforceable regulation, or an enforceable noise code or ordinance, this document provides the Department's guidance for completing noise impact assessments.

The NYSDEC policy includes the following thresholds for significant sound pressure level (SPL) increases:

> *"The goal for any permitted operation should be to minimize increases in sound pressure level above ambient levels at the chosen point of sound reception. Increases ranging from 0 to 3 dB should have no appreciable effect on receptors. Increases from 3 to 6 dB may have potential for adverse noise impact only in cases where the most sensitive of receptors are present. Sound pressure increases of more than 6 dB may require a closer analysis of impact potential depending on existing SPLs and the character of surrounding land use and receptors. SPL increases approaching 10 dB result in a perceived doubling of SPL. The perceived doubling of the SPL results from the fact that SPLs are measured on a logarithmic scale. An increase of 10 dB(A) deserves consideration of avoidance and mitigation measures in most cases. The above thresholds as indicators of impact potential should be viewed as guidelines subject to adjustment as appropriate for the specific circumstances one encounters."*

The NYSDEC policy further states: "In non-industrial settings the SPL should probably not exceed ambient noise by more than 6 dB(A) at the receptor. An increase of 6 dB(A) may cause complaints. There may be occasions where an increase in SPLs of greater than 6 dB(A) might be acceptable. The addition of any noise source, in a nonindustrial setting, should not raise the ambient noise level above a maximum of 65 dB(A). This would be considered the "upper end" limit since 65 dB(A) allows for undisturbed speech at a distance of approximately 3 feet.

Ambient noise SPLs in industrial or commercial areas may exceed 65 dB(A) with a high end of approximately 79 dB(A)."

The NYSDEC policy describes the use of the Equivalent Sound Level (Leq) "which assigns a single value of sound level for a period of time in which varying levels of sound are experienced over that time period. The Leq value provides an indication of the effects of sound on people. It is also useful in establishing the ambient sound levels at a potential noise source." Measured Leq sound levels are used in this assessment.

5.0 Facility Sound Level Measurements

In order to assess existing facility sound levels during an typical day of operation, acoustical measurements were made with calibrated sound level meters at locations adjacent to the site (as shown on Figure 1). Monitoring location M1 was located just outside north side of the facility north of the facility entrance. M2 was located within the fenced property along the western edge of the facility at a location on the facility property that is closest to nearest offsite residential receptor to the northwest, located approximately 1,000 feet away from the site.

5.1 Existing Facility Sound Level Measurements

Sound level measurements were conducted over a 24-hour period on October 13-14, 2020 in order to characterize the existing facility sound levels during a typical "average" day of operation, as well as ambient community sound levels during facility non-operational hours. All meters used in this noise assessment were calibrated by the manufacturer and/or vendor prior to use for field measurements. Vendor provided calibration records for the meters and calibrators are provided in Appendix A. All meters were also field calibrated for each monitoring event which were recorded on the meter output data.

Prior to initiating sound level measurements, field measurements of temperature and wind speed were recorded to verify that weather conditions were within the operating parameters recommended by the manufacturer of the noise meter. The conditions were clear, winds ranging from 1.8 to 11 mph and temperatures ranging from 37 to 64 degrees Fahrenheit; all within manufacturer operating parameters.

Each meter was calibrated before and after every sound level reading with a Quest QC-10 Calibrator to a standard of 114 dB. Following calibration, each meter was set up on a tripod at a height of approximately 5 feet above the ground, fitted with a manufacturer provided windscreen and set to record at an A-weighting and slow response settings (6 NYCRR Part 360 required settings). The equivalent steady state sound levels (Leq) were recorded by the meters on a continuous basis. During the sampling period, field observations regarding specific sources of noise that contributed to overall background sound levels were recorded by field personnel.

5.2 Current Peak-hour and Proposed Peak-hour Transfer Facility Operations

Additional sound level measurements were conducted at monitoring locations M1 and M2 on November 10, 2020. The purpose of these measurements was to characterize the current "peak" hour of transfer station operations, as well as the proposed "peak" hour of transfer station operations. Facility provided scale data and traffic study data was reviewed to determine the peak hourly number of waste haul trucks entering the facility of approximately 15 trucks per hour, as provided in the Traffic Analysis Report.

Because the facility typically receives a variable number of trucks, operations were staged in order to process the peak-hourly number of trucks that the facility currently receives based on the previous year of scale data truck counts. In order to measure source sound level data from the proposed peak number of trucks that the facility is anticipated to receive as part of the proposed permit modification, operations were also staged to simulate an estimated peak-hour truck traffic of 26 trucks per hour.

Prior to initiating the sound level measurements, field measurements of temperature and wind speed were recorded to verify that weather conditions were within the operating parameters recommended by the manufacturer of the noise meter. The conditions were clear, winds ranging from 2 to 8 mph and temperatures ranging from 39 to 68 degrees Fahrenheit; all within manufacturer operating parameters.

Each meter was calibrated before and after every sound level reading with a Quest QC-10 Calibrator to a standard of 114 dB. Following calibration, each meter was set up on a tripod at a height of approximately 5 feet above the ground, fitted with a manufacturer provided windscreen and set to record at an A-weighting and slow response settings (6 NYCRR Part 360 required settings). The equivalent steady state sound levels (Leq) were recorded by the meters on a continuous basis. During the sampling period, field observations regarding specific sources of noise that contributed to overall background sound levels were recorded by field personnel.

6.0 Measurement Results

The predominant source of operational sound observed at the site during daytime hours was the movement of trucks around the site, in particular the pick-up and drop-off of roll-off dumpsters. During the measurement events, other offsite noise sources, not related to the WMNY facility, were also observed. The primary contributor of ambient sound levels at the monitored locations was traffic noise from nearby I-787 and noise from the surrounding industrial facilities, in particular the adjacent metal scrapyard. The non-WMNY traffic from the nearby Boat Street also contributed to the ambient sound levels. Traffic along this roadway is mostly commercial due to the industrial nature of the facility location; most vehicles observed that traveled along Boat Street without entering the facility were tractor trailers. The offsite railways and associated rail traffic to the west of the facility were another ambient noise source. The railway is located between the facility and the nearest residential receptor, and I-787 is located to the north of the residential receptor.

Tables 2 and 3 provide the results of the existing ambient sound level and typical operational day sound level measurements at the two measurement locations measured on October 13-14th, 2020. Each table shows the A-weighted Leq measured during each on-hour period throughout the 24-measurement at each location. The highest hourly sound levels generally occurred between the hours of 7 AM and 8 AM, with Leq values of approximately 62 to 66 dBA at the two locations. The lowest hourly sound levels occurred between 9 PM and 10 PM with Leq values between about 48 and 56 dBA at the two sites. Note that the M1 sound level between 10 AM – 11 AM is elevated due to offsite noise sources not related to the transfer facility that occurred close to this meter measurement location.

Table 2: M1 Port of Albany Transfer Facility 24-hour Noise Monitoring
October 13-14, 2020

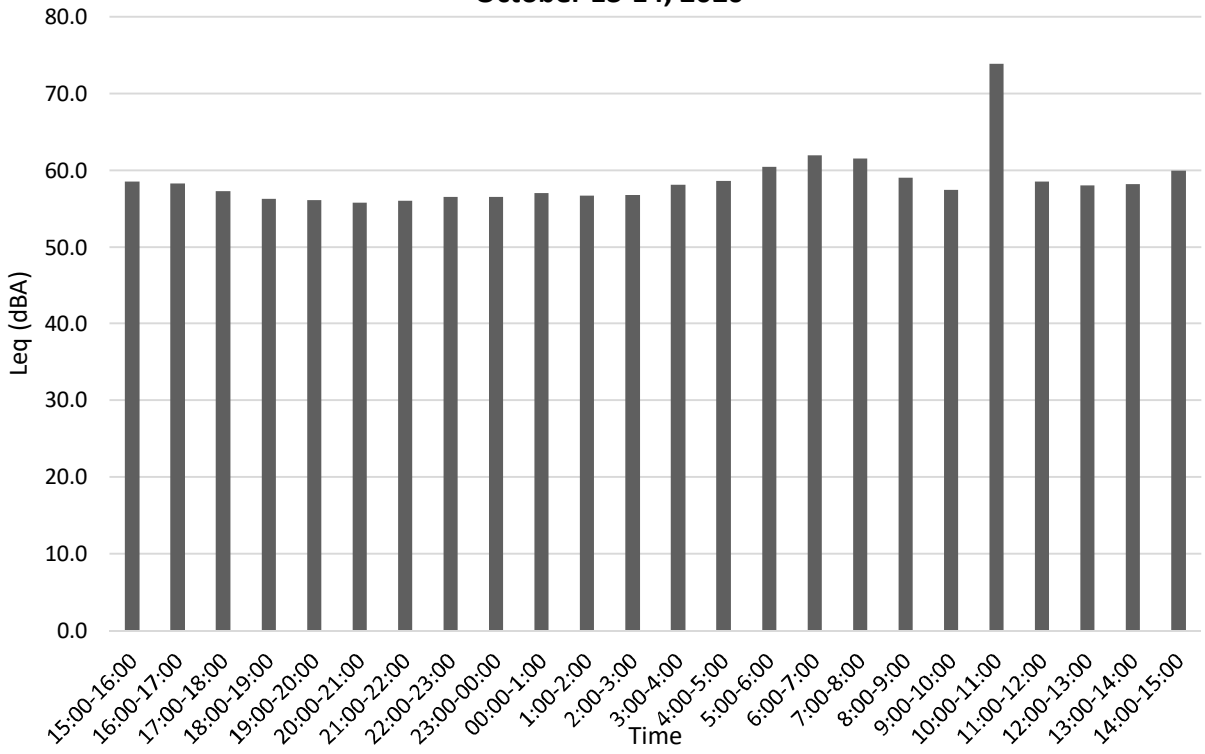

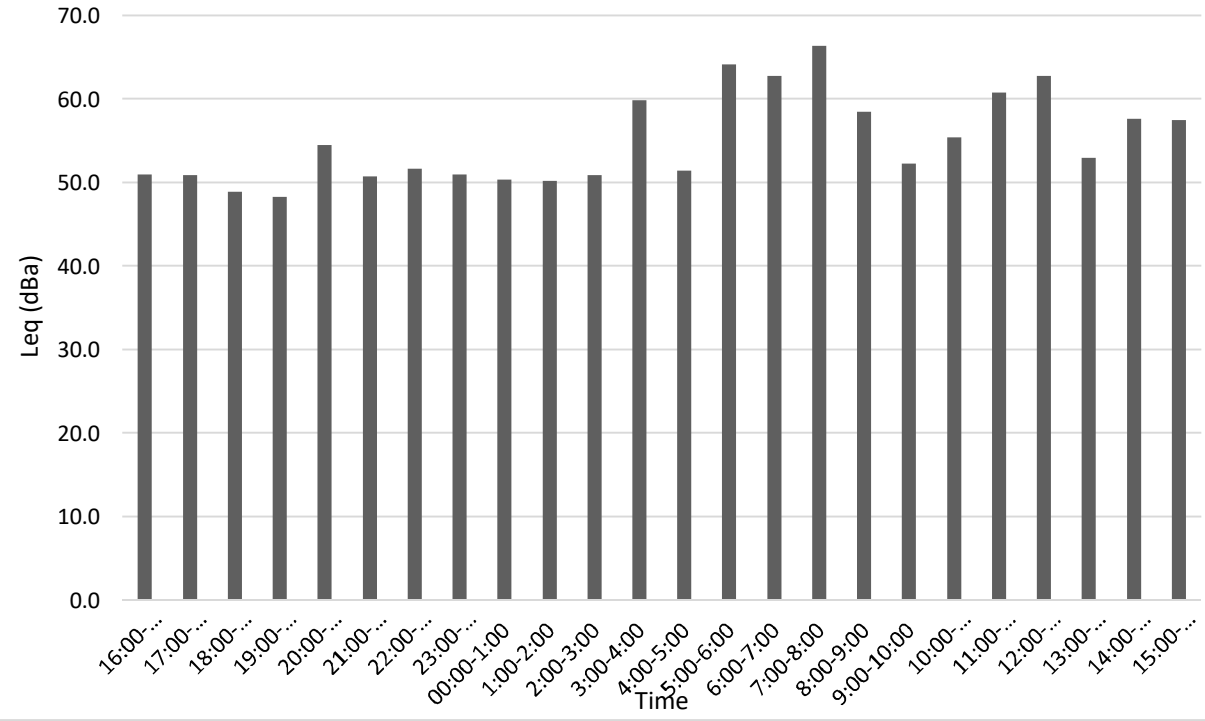

Table 3: M2 Port of Albany Transfer Facility 24-hour Noise Monitoring
October 13-14, 2020

Tables 4 and 5 provide the results from current and proposed peak-hour nighttime and daytime measurement periods, as well as the typical day measurement for the same time periods as the current and proposed peak hours were monitored.

Table 4
Measured Daytime Hourly Leq Sound Level Comparison
12:00 PM – 1:00 PM

Measurement Location	Current Typical Day Leq (dBA)	Current Peak Leq (dBA)	Proposed Peak Leq (dBA)	Difference in Leq (dBA)
M1	58	60	61	1 - 3
M2	63	62	63	0 - 1

Table 5
Measured Nighttime Hourly Leq Sound Level Comparison
6:00 AM – 7:00 AM

Measurement Location	Current Typical Day Leq (dBA)	Current Peak Leq (dBA)	Proposed Peak Leq (dBA)	Difference in Leq (dBA)
M1	62	59	61	0 - 3
M2	63	66	66	0 - 3

Note: Hourly Leq sound levels for the proposed peak periods are based on 30 minute periods to allow for them to be simulated by the facility to provide conservative measurements at the monitoring locations.

6.1 Proposed Operation - SEQR Receptor Impact Assessment

The sound levels measured at the facility during the different operating scenarios were compared to determine the difference in levels to assess whether the proposed change in truck traffic from current typical conditions will have an appreciable increase in sound levels. Although the measurements were made at the facility property boundary, this overall change in sound levels can be propagated to nearby sensitive receptors to determine if there is the potential for a significant increase in sound levels as a result of the proposed change in operations at the facility as a result of the permit modification.

The following list of criteria from the NYSDEC Noise Policy was used for the assessment of potential offsite noise impacts:

- The goal for any permitted operation should be to minimize increases in sound pressure level above ambient levels at the chosen point of sound reception. Increases ranging from 0 to 3 dB should have no appreciable effect on receptors. Increases from 3 to 6 dB may have potential for adverse noise impact only in cases where the most sensitive of

receptors are present. Sound pressure increases of more than 6 dB may require a closer analysis of impact potential depending on existing SPLs (sound pressure levels) and the character of surrounding land use and receptors.

- The human reaction to increases in sound pressure level for an increase less than 5 dB is classified as unnoticed to tolerable.
- An increase of 10 dBA deserves consideration of avoidance and mitigation measures in most cases.

Based on the results of this assessment and as shown in Tables 4 and 5, the change in the sound level predicted at the facility property lines from current typical to proposed peak-hour truck acceptance rates is between 0 - 3 dBA for all locations; therefore, in accordance with the NYSDEC Noise Policy, there will be no appreciable effect on the community as a result of the proposed permit modification. As shown in Tables 4 and 5, the variation in truck traffic to the site does not have a significant impact in overall sound levels, indicating that offsite ambient noise is likely the predominant noise.

6.2 Proposed Operation - 6 NYCRR Part 360 Compliance

The facility property lines abut commercial/industrial facilities; therefore, the facility is not required to be monitored for Part 360 compliance per 6 NYCRR Part 360.19(J)) because the Part 360 noise standards apply to residential properties. The nearest residential property is located approximately 1,000 feet to northwest. In order to demonstrate that the facility noise at that residential property line is in compliance with Part 360 noise limits, the measured peak hourly sound levels during the daytime and nighttime periods were projected to this location.

For the daytime period, the peak hourly sound levels onsite were less than the Part 360 noise standard of 67 dBA. Therefore, since sound levels decrease over distance, it can be concluded that the sound measured at the facility property line will be less than 67 dBA at the residential receptor property when propagated over 1,000 feet.

Sound level monitoring results show that the noise levels at the facility property line closest to the residential receptor property are greater than the 57 dBA nighttime Part 360 regulatory sound limits during the nighttime hours, primarily due to offsite local noise sources not related to the WMNY facility, and facility “start-up” including haul trucks idling and exiting facility for daily pick-ups. Therefore, in order to determine the noise level experienced at the Part 360 compliance location, this measured sound level was projected to the residential receptor location northwest of the site using distance doubling attenuation as described in Section 3.1. The distance from M2 to the main onsite noise source identified during the measurement periods, truck activity in the back parking lot near M2, was estimated to be approximately 100 feet. Using the distance doubling noise attenuation method as described in Section 2.1, assuming a 6 dBA reduction in sound level in every doubling of the distance from the source, the sound level measured at M2 during facility operations would decrease by approximately 20 dBA over the distance from the source to the nearest property line resulting a sound level of

approximately 46 dBA, resulting in sound levels well below the Part 360 compliance nighttime noise limit of 57 dBA.

If should also be noted that field personnel observed sounds adjacent to the nearest residential property during the measurement periods and reported that the predominant sources of noise were observed to be from vehicle traffic along I-787 and operational noise from the metal scrapyard and processing facility located south of the Transfer Station. Other noise sources included tractor trailer activity in an area west of the facility which appeared to be a soil stockpiling area and not related to the WMNY facility.

7.0 Noise Abatement Best Management Practices

Notwithstanding the fact that the facility is shown to comply with the 6 NYCRR Part 360 noise regulations, and the project is not expected to increase sound levels at nearby residential receptors, in an effort to further reduce noise generation and propagation, the facility also implements best management practices to reduce noise, including, but not limited to:

- Effective exhaust mufflers in proper working condition are maintained on all engine-powered equipment at the site as required by 6 NYCRR Part 360 regulations. Mufflers are inspected during routine maintenance and are replaced as necessary.
- Vehicles will be required to drive within a site speed limit of 15 mph when entering the site, on the site, and when leaving the site.
- WMNY will be installing high speed doors on the Transfer Station Building waste materials processing area as part of the proposed permit modification project to further reduce noise impacts from operations within the Transfer Station Building.

8.0 Summary and Conclusion

In order to further determine the current typical and future predicted noise impacts resulting from a proposed permit modification for the facility, an operating noise impact assessment was performed to compare current typical day sound levels, current peak-hour noise levels, and proposed peak-hour noise levels at the facility boundary. This assessment accounted for facility operational equipment as well as vehicles accessing the facility under these conditions. Sound level measurements for current typical peak-hour operating conditions and simulated future peak-hour operating conditions were measured based on the projected peak-hour truck traffic. This noise impact assessment for the operating transfer station concludes: (i) that there is no current noise impact at the nearest residential receptor property; (ii) that there is no appreciable increase in noise levels at the nearest residential receptor property due to the proposed permit modification; and that the current and predicted future peak-hour sound levels will comply with the NYSDEC Noise Policy criteria for the assessment of potential offsite noise impacts under SEQR and the applicable operational noise limits of the NYSDEC Part 360 noise regulation.

RE: Response to Sound Level Monitoring Protocol
Waste Management of NY, LLC
Port of Albany Transfer Station
DEC #4-0101-00185/00002
100 Boat Street
City of Albany, Albany County

Dear Ms. Blake:

On August 7, 2020, the Department received a Sound Level Monitoring Protocol (Protocol) you submitted on behalf of Waste Management of NY, LLC (WM). The proposed sound level monitoring is being completed in support of providing additional documentation as requested in the Department's March 16, 2020 Notice of Incomplete Application (NOIA) for the proposed transfer permit modification.

After further review of the Protocol, the Department has the following comments:

1. The Department acknowledges that because the property lines abut commercial/industrial facilities, WM is not required to be monitored for Part 360 compliance per 6 NYCRR Part 360.19(j); however, noise monitoring must take place to analyze potential noise impacts under the State Environmental Quality Review Act (SEQR), which for this proposed project, includes an Environmental Justice (EJ) review.
2. Protocol Section 2.0 (Property Boundary Sound Level Measurements) indicates sound level measurements will be taken from 6AM to 7 AM and again during the peak operational daytime hour of 1PM-2PM. Protocol Section 4.0 (Data Reporting) indicates 'the noise assessment will include a discussion comparing the operational sound levels to the NYSDEC Part 360 Urban Community daytime sound level standard of 67 dBA (1-hour L_{eq}) and nighttime sound level standard of 57 dBA (1-hour L_{eq})'. Please note that if the ambient readings of daytime and nighttime are significantly different, the Department may require a 24 hr noise monitoring period during the noise evaluation. The Department requests the daytime and nighttime ambient readings be submitted to the Department, prior to completing the final report.

3. Comments 15-18 in the March 16, 2020 NOIA (attached) address traffic related items, which include comments about increased truck trips, staging locations of trucks, sizes of trucks, etc. It is noted the February 6, 2020 Enhanced Public Participation Plan, prepared by Behan Planning and Design, includes a 'Regional Overview Map Depicting Traffic Flow Pattern Port of Albany Transfer Station'; the primary truck routing plan would avoid the use of South Pearl Street in the vicinity of the Ezra Prentice homes and directs the hauling vehicles to the transfer station using South Port Road, Smith Boulevard and I-787 to Church Street. While the Protocol doesn't specify taking actual measurements at the areas where there may be the potential for truck traffic to impact the EJ communities, within your response to the NOIA, a discussion should be included on whether noise (and emissions) from vehicles will impact the EJ communities, and if not, why.

As currently presented, the Department approves the Protocol but does note the specific comments included above. Please feel free to contact me by telephone at (518) 357-2171 or by e-mail at angelika.stewart@dec.ny.gov if you have any questions.

Sincerely,

Angelika Stewart

Re: Waste Management
Port of Albany Transfer Station Permit No.
4-0101-00185/00002
Sound Level Monitoring Protocol
File: 1242.062.002

Dear Ms. Stewart:

On behalf of Waste Management of NY, LLC we are submitting the attached Sound Level Monitoring Protocol for the Department's approval. The proposed sound level monitoring is being completed in support of providing additional documentation as requested in the Department's March 16, 2020 Notice of Incomplete Application for the transfer station permit modification. The intent of the sound level monitoring is to assess the compliance of the existing operations with applicable noise standards of 6 NYCRR Part 360.19(j). This information will also be used in support of the assessment of proposed operating conditions for the facility.

In the interest of conserving resources, these documents are being submitted electronically for the Department's review; however, paper copies can be provided at the Department's request. Please feel free to contact me at (315) 457-5200 with any questions or to request paper copies.

Sincerely,

BARTON & LOGUIDICE, D.P.C.

Waste Management of NY, LLC
Port of Albany Transfer Station
Sound Level Monitoring Protocol
August 2020

Barton & Loguidice, D.P.C. (B&L), has prepared this Sound Level Monitoring Protocol for a sound level monitoring event to be conducted at the Waste Management of New York, LLC (WMNY) Transfer Station located at the Port of Albany (POA) in Albany, New York.

The purpose of this protocol is to identify the instrumentation, procedures, and proposed monitoring locations to be utilized to obtain sound level data during facility operations to assess compliance with the applicable noise standards of 6 NYCRR Part 360.19(j). This protocol has been prepared to meet the requirements of New York State Department of Environmental Conservation (NYSDEC) regulation 6 NYCRR Part 360.19(j), and NYSDEC program policy document "Assessing and Mitigating Noise Impacts, Feb. 2001".

1.0 Instrumentation

The following instrumentation will be utilized by the Engineer conducting the monitoring:

1.1 Sound Level Meter and Calibrator

- Type 1, or Type 2, sound level meters that comply with the American National Standards Institute's (ANSI) standards will be used to measure sound levels. Each sound level meter microphone will be fitted with a wind screen and mounted on a tripod at a height of approximately 5 feet above the ground. Each meter will be have a data logger;
- An acoustical calibrator that conforms with the sound level meter field calibration requirements will be used to field calibrate the sound level meter before and after taking measurements; and,
- Factory calibration documentation for the sound level meter and acoustical meter calibrator will be provided by the equipment suppliers, certifying that laboratory calibrations for each instrument is current.

1.2 Electronic wind speed indicator used to measure ambient wind speed and direction, a thermometer for measurement of ambient temperature, and a barometer for measurement of atmospheric pressure. Alternatively, weather data may be obtained from the site or nearest weather station.

2.0 Property Boundary Sound Level Measurements

B&L will complete sound level measurements at the transfer station west property line which has residential receptor property locations nearest to the proposed facility (approximately 1,000 feet west of the facility and across several railroad tracks) in accordance with NYSDEC noise assessment guidance to establish the existing sound levels while the facility is in operation. Although this property line directly abuts railroad tracks (not used for facility operations), and therefore Part 360 compliance is not required to be met at this location because it is not authorized for residential purposes, monitoring at the facility property line will provide a conservative way of assessing facility compliance. The remaining three facility property lines abut commercial/industrial facilities, and therefore are not required to be monitored for Part 360 compliance per 6 NYCRR Part 360.19(j).

The facility hours of operation are 6 A.M. to 5 P.M.; therefore, NYSDEC defined daytime hours (7 A.M. to 10 P.M.) and nighttime hours (10 P.M. to 7 A.M.) require assessment to determine compliance with the daytime and nighttime noise standards of Part 360. Sound level measurements will be taken from 6 A.M. to 7 A.M., and during the peak operational daytime hour of 1 P.M. – 2 P.M., using two (2) sound level meters.

3.0 General Monitoring Procedures

At each sound level monitoring location, field measurements of temperature, atmospheric pressure and wind speed will be recorded prior to initiating sound measurement. Sound level monitoring is weather dependent; therefore, measurements will not be taken during periods of precipitation, or when the measured wind speed is at or above 12 miles per hour (mph).

Each sound level meter will be calibrated immediately before commencement of, and immediately after completion of, each series of measurements, with a manufacturer provided acoustical calibrator. Following each calibration, the results will be recorded on field logs. A wind screen provided with the meter will be installed on the meter microphone. The meter will be set to “slow” response and A-weighting scale (dBA) in accordance with 6 NYCRR Part 360.19(j) solid waste facility noise regulations.

Each sound level meter will be equipped with a data logger programmed to record the sound pressure level (SPL) and equivalent steady-state sound level (Leq) during the measurement period. Field observations of audible sounds and sources will be made by B&L field personnel during the monitoring period.

The exact day of the study will depend on the weather, and will be scheduled during typical facility operations.

4.0 Data Reporting

The sound level monitoring data will be recorded by the sound level meter data loggers. Following data collection, the recorded data will be downloaded for analysis to determine the sound levels used to assess facility Part 360 compliance. A final report will summarize the methods and equipment utilized, and field observations of noise sources identified during the monitoring. The report will include a summary of the results of the measured operational sound levels and a figure showing the facility property boundary and the nearest residential receptor locations. The noise assessment will include a discussion comparing the operational sound levels to the NYSDEC Part 360 Urban Community daytime sound level standard of 67 dBA (1-hour Leq) and nighttime sound level standard of 57 dBA (1-hour Leq).

If the operating noise data indicates that the facility operations exceed the industrial setting noise limits at the monitored locations, then background sound level readings may need to be completed when the facility is not in operation per Part 360.19(j), which would be conducted on a separate day in accordance with this protocol. Alternatively, sound level projections to the residential receptor properties may be calculated in accordance with NYSDEC program policy document to determine compliance.

Ms. Blake,

After touring the facility at 100 Boat St. today, the Albany County Water Purification District (District) deems that no permit will be required for the proposed discharge of garbage leachate and wash down water. Waste Management (Company) will be approved for discharge after a final walkthrough and inspection of the proposed drain and grating. I can be reached at (518) 447-1623 with any questions or concerns moving forward.

Sincerely, Jake O'Connor

Revised EAF

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Port of Albany Transfer Station Permit Modification		
Project Location (describe, and attach a general location map): 100 Boat St, Albany, Albany County, NY		
Brief Description of Proposed Action (include purpose or need): The proposed action is to modify the transfer station permit to add the acceptance of putrescible waste (MSW) to the list of the materials currently accepted which include construction & demolition debris, dry commercial waste, and recyclables. There is no proposed change to the permitted 749 tons/ day accepted at the facility.		
Name of Applicant/Sponsor: Waste Management of NY, LLC (Warren Harris)	Telephone: 1(518) 636-2141 E-Mail: wharri11@wm.com	
Address: 100 Boat St.		
City/PO: Albany	State: NY	Zip Code: 12202
Project Contact (if not same as sponsor; give name and title/role): Jillian Blake P.E., Managing Engineer, Barton & Loguidice, D.P.C	Telephone: (315)-457-5200 E-Mail: jblake@bartonandloguidice.com	
Address: 443 Electronics Parkway		
City/PO: Liverpool	State: NY	Zip Code: 13088
Property Owner (if not same as sponsor): Port of Albany	Telephone: 518-463-8763 E-Mail:	
Address: 106 Smith Boulevard		
City/PO: Albany	State: NY	Zip Code: 12202

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)

Government Entity	If Yes: Identify Agency and Approval(s) Required	Application Date (Actual or projected)
a. City Counsel, Town Board, or Village Board of Trustees ☑Yes ☐No	City of Albany Council	
b. City, Town or Village Planning Board or Commission ☐Yes ☑No		
c. City, Town or Village Zoning Board of Appeals ☐Yes ☑No		
d. Other local agencies ☐Yes ☑No

i. Coastal Resources.

i. Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☑Yes ☐No

ii. Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☑Yes ☐No

iii. Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☐No

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☐Yes ☑No

- **If Yes,** complete sections C, F and G.
- **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1

C.2. Adopted land use plans.

a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located? ☑Yes ☐No

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐Yes ☑No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) ☑Yes ☐No

If Yes, identify the plan(s):

NYS Heritage Areas:Mohawk Valley Heritage Corridor

c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? ☐Yes ☑No

If Yes, identify the plan(s):

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
General Industrial District

b. Is the use permitted or allowed by a special or conditional use permit? ☑ Yes ☐ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

a. In what school district is the project site located? _____

b. What police or other public protection forces serve the project site?
Albany Police Department

c. Which fire protection and emergency medical services serve the project site?
Albany Fire Department

d. What parks serve the project site?
N/A

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Industrial

b. a. Total acreage of the site of the proposed action? ~6 acres
b. Total acreage to be physically disturbed? 0 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? ~6 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % N/A Units: N/A

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
_____
ii. Is a cluster/conservation layout proposed? ☐ Yes ☐ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: <3 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

f. Does the project include new residential uses? ☐ Yes ☑ No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase	_____	_____	_____	_____
At completion of all phases	_____	_____	_____	_____

g. Does the proposed action include new non-residential construction (including expansions)? ☐ Yes ☑ No

If Yes,

i. Total number of structures _____

ii. Dimensions (in feet) of largest proposed structure: _____height; _____width; and _____ length

iii. Approximate extent of building space to be heated or cooled: _____ square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No

If Yes,

i. Purpose of the impoundment: _____

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:

_____

iii. If other than water, identify the type of impounded/contained liquids and their source.

_____

iv. Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

v. Dimensions of the proposed dam or impounding structure: _____ height; _____ length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐ Yes ☑ No

If Yes:

i .What is the purpose of the excavation or dredging? _____

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

i*v.* Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If yes, describe. _____

_____

v. What is the total area to be dredged or excavated? _____acres

vi. What is the maximum area to be worked at any one time? _____ acres

vii. What would be the maximum depth of excavation or dredging? _____ feet

viii. Will the excavation require blasting? ☐ Yes ☐ No

ix. Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☑ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): _____

_____

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

_____

_____

_____

_____

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☐ No

If Yes, describe: _____

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☐ No

If Yes:

- acres of aquatic vegetation proposed to be removed: _____
- expected acreage of aquatic vegetation remaining after project completion: _____
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access): _____

_____

- proposed method of plant removal: _____
- if chemical/herbicide treatment will be used, specify product(s): _____

v. Describe any proposed reclamation/mitigation following disturbance: _____

_____

c. Will the proposed action use, or create a new demand for water? ☐ Yes ☑ No

If Yes:

i. Total anticipated water usage/demand per day: _____ gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☐ Yes ☐ No

If Yes:

- Name of district or service area: _____
- Does the existing public water supply have capacity to serve the proposal? ☐ Yes ☐ No
- Is the project site in the existing district? ☐ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☐ No
- Do existing lines serve the project site? ☐ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☐ Yes ☐ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

_____

- Source(s) of supply for the district: _____

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☐ No

If, Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- Proposed source(s) of supply for new district: _____

v. If a public water supply will not be used, describe plans to provide water supply for the project: _____

_____

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No

If Yes:

i. Total anticipated liquid waste generation per day: 250 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each): _____

Sanitary wastewater and leachate

_____

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No

If Yes:

- Name of wastewater treatment plant to be used: City of Albany
- Name of district: N/A
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

If Yes:

- Describe extensions or capacity expansions proposed to serve this project: _____

_____

_____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:

- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

_____

_____

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

_____

_____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☐ Yes ☑ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or _____ acres (impervious surface)

_____ Square feet or _____ acres (parcel size)

ii. Describe types of new point sources. _____

_____

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

_____

_____

- If to surface waters, identify receiving water bodies or wetlands: _____

_____

_____

- Will stormwater runoff flow to adjacent properties? ☐ Yes ☐ No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☑ Yes ☐ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

Heavy equipment and Trucks

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

_____

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

_____

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:

- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

_____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

_____

_____

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☐Yes ☑No

`Traffic will remain below permitted levels`

If Yes:

i. When is the peak traffic expected (Check all that apply): ☑ Morning ☐ Evening ☐Weekend

☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): _____

_____

iii. Parking spaces: Existing _____ Proposed _____ Net increase/decrease _____

iv. Does the proposed action include any shared use parking? ☐Yes ☑No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

_____

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☐Yes ☑No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☐Yes ☑No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☐Yes ☑No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☐Yes ☑No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____

_____

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

_____

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☐No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 6:00am-5:00pm
- Saturday: 6:00am-5:00pm
- Sunday: Closed
- Holidays: Closed

ii. During Operations:

- Monday - Friday: 6:00am-11:00pm
- Saturday: 6:00am-11:00pm
- Sunday: Closed
- Holidays: Closed

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☐ Yes ☑ No

If yes:

i. Provide details including sources, time of day and duration:

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☐ No

Describe:

n. Will the proposed action have outdoor lighting? ☐ Yes ☑ No

If yes: No new lighting is proposed.

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☐ Yes ☐ No

Describe:

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☑ Yes ☐ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures:

Periodic odors from operations may occur, however these will be mitigated through operational controls.The transfer of waste will occur within the building, which will limit odors leaving the site and an odor neutralization system will be installed to control offsite odors.

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☐ Yes ☑ No

If Yes: No new bulk storage is proposed. Existing storage exists in the maintenance area.

i. Product(s) to be stored

ii. Volume(s) _____ per unit time _____ (e.g., month, year)

iii. Generally, describe the proposed storage facilities:

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☐ Yes ☑ No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices? ☐ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☑ Yes ☐ No Facility is an existing solid waste transfer station.

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: _____ tons per _____ (unit of time)
- Operation : 749 tons per day (unit of time) (daily through-put)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: N/A
- Operation: N/A

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: N/A
- Operation: transfer to permitted disposal or processing facility

s. Does the proposed action include construction or modification of a solid waste management facility? ☑ Yes ☐ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): Transfer Station handling: Recyclables, MSW and C&D debris

ii. Anticipated rate of disposal/processing:

- ~19,000 Tons/month, if transfer or other non-combustion/thermal treatment, or 749 tons/day
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☐ Urban ☑ Industrial ☐ Commercial ☐ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other (specify): _____

ii. If mix of uses, generally describe:

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	~6	~6	0
• Forested	0	0	0
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	0	0	0
• Agricultural (includes active orchards, field, greenhouse etc.)	0	0	0
• Surface water features (lakes, ponds, streams, rivers, etc.)	0	0	0
• Wetlands (freshwater or tidal)	0	0	0
• Non-vegetated (bare rock, earth or fill)	0	0	0
• Other Describe: _____			

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No

i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☐ Yes ☑ No

If Yes,

i. Identify Facilities:

_____

_____

e. Does the project site contain an existing dam? ☐ Yes ☑ No

If Yes:

i. Dimensions of the dam and impoundment:

- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____

iii. Provide date and summarize results of last inspection:

_____

_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☑ Yes ☐ No

If Yes:

i. Has the facility been formally closed? ☐ Yes ☑ No

- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:

The solid waste management facility is the project site.

iii. Describe any development constraints due to the prior solid waste activities: N/A

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

_____

_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☑ Yes ☐ No

If Yes:

i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☐ Yes ☑ No

☐ Yes – Spills Incidents database — Provide DEC ID number(s): _____

☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): _____

☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures: N/A

_____

_____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☑ Yes ☐ No

If yes, provide DEC ID number(s): 546031

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

Site Name: Hudson River PCB Sediments, Classification: 2 Dredging was completed in Fall 2015 and habitat reconstruction was completed in 2016. The GE plant responsible for the contamination was decommissioned in 2016.

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? 5-15 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site: Urban land 100 %

d. What is the average depth to the water table on the project site? Average: _____ feet

e. Drainage status of project site soils:
☐ Well Drained: _____% of site
☐ Moderately Well Drained: _____% of site
☐ Poorly Drained _____% of site
N/A - Site predominantly building or asphalt

f. Approximate proportion of proposed action site with slopes:
☑ 0-10%: 100 % of site
☐ 10-15%: _____% of site
☐ 15% or greater: _____% of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☑ Yes ☐ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☑ Yes ☐ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name Hudson River Estuary (not adjacent or adjoining) Classification _____
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☑ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☑ Yes ☐ No

k. Is the project site in the 500-year Floodplain? ☐ Yes ☑ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☑ Yes ☐ No
If Yes:

i. Name of aquifer: Principal Aquifer

m. Identify the predominant wildlife species that occupy or use the project site: _____

_____ _____ _____

_____ _____ _____

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No

If Yes:

i. Describe the habitat/community (composition, function, and basis for designation): _____

_____

ii. Source(s) of description or evaluation: _____

iii. Extent of community/habitat:

- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☑ Yes ☐ No

If Yes:

i. Species and listing (endangered or threatened): _____

Shortnose Sturgeon

_____

_____

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:

i. Species and listing: _____

_____

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No

If yes, give a brief description of how the proposed action may affect that use: _____

_____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No

If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No

i. If Yes: acreage(s) on project site? _____

ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No

If Yes:

i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature

ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____

_____

_____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No

If Yes:

i. CEA name: _____

ii. Basis for designation: _____

iii. Designating agency and date: _____

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☐ Yes ☑ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: _____

iii. Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

Letter Received 5.12.17 Refer to Attachment.

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s): _____

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

i. Identify resource: Hudson River Estuary. The project site is at the Port of Albany, which is on the Hudson River. The project site is ~1000 ft. away.

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): _____

iii. Distance between project and resource: ~1000 ft

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

EAF Mapper Summary Report

Wednesday, April 17, 2019 9:10 AM

Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.

B.i.i [Coastal or Waterfront Area]	Yes
B.i.ii [Local Waterfront Revitalization Area]	Yes
C.2.b. [Special Planning District]	Yes - Digital mapping data are not available for all Special Planning Districts. Refer to EAF Workbook.
C.2.b. [Special Planning District - Name]	NYS Heritage Areas:Mohawk Valley Heritage Corridor
E.1.h [DEC Spills or Remediation Site - Potential Contamination History]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Listed]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Environmental Site Remediation Database]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.iii [Within 2,000' of DEC Remediation Site]	Yes
E.1.h.iii [Within 2,000' of DEC Remediation Site - DEC ID]	546031
E.2.g [Unique Geologic Features]	No
E.2.h.i [Surface Water Features]	No
E.2.h.ii [Surface Water Features]	Yes
E.2.h.iii [Surface Water Features]	Yes - Digital mapping information on local and federal wetlands and waterbodies is known to be incomplete. Refer to EAF Workbook.
E.2.h.v [Impaired Water Bodies]	No
E.2.i. [Floodway]	No
E.2.j. [100 Year Floodplain]	Yes
E.2.k. [500 Year Floodplain]	No
E.2.l. [Aquifers]	Yes
E.2.l. [Aquifer Names]	Principal Aquifer

E.2.n. [Natural Communities]	No
E.2.o. [Endangered or Threatened Species]	Yes
E.2.o. [Endangered or Threatened Species - Name]	Shortnose Sturgeon
E.2.p. [Rare Plants or Animals]	No
E.3.a. [Agricultural District]	No
E.3.c. [National Natural Landmark]	No
E.3.d [Critical Environmental Area]	No
E.3.e. [National or State Register of Historic Places or State Eligible Sites]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.3.f. [Archeological Sites]	Yes
E.3.i. [Designated River Corridor]	No

NEW YORK STATE OF OPPORTUNITY. | Parks, Recreation, and Historic Preservation

ANDREW M. CUOMO
Governor

ROSE HARVEY
Commissioner

May 12, 2017

Mrs. LUANN MEYER
PROJECT MANAGER
BARTON & LOGUIDICE
11 CENTRE PARK
SUITE 203
ROCHESTER, NY 14614

Re: DEC
WMNY Port of Albany Transfer Facility
100 Boat Street, Albany, NY 12202
17PR03009

Dear Mrs. MEYER:

Thank you for requesting the comments of the Office of Parks, Recreation and Historic Preservation (OPRHP). We have reviewed the project in accordance with the New York State Historic Preservation Act of 1980 (Section 14.09 of the New York Parks, Recreation and Historic Preservation Law). These comments are those of the OPRHP and relate only to Historic/Cultural resources. They do not include potential environmental impacts to New York State Parkland that may be involved in or near your project. Such impacts must be considered as part of the environmental review of the project pursuant to the State Environmental Quality Review Act (New York Environmental Conservation Law Article 8) and its implementing regulations (6 NYCRR Part 617).

Based upon this review, it is the New York State Office of Parks, Recreation and Historic Preservation's opinion that your project will have no impact on archaeological and/or historic resources listed in or eligible for the New York State and National Registers of Historic Places.

If further correspondence is required regarding this project, please be sure to refer to the OPRHP Project Review (PR) number noted above.

Sincerely,

Michael F. Lynch, P.E., AIA

Director, Division for Historic Preservation

1.0 INTRODUCTION

WMNY operates the Port of Albany transfer station in the City of Albany, Albany County, New York (the facility). This Traffic Analysis Report is submitted on behalf of Waste Management of New York, LLC (WMNY) to the New York State Department of Environmental Conservation (NYSDEC) as part of a document submitted in support of a proposed modification to the existing facility permit to allow for the acceptance of putrescible municipal solid waste (MSW) at the facility.

Under the proposed permit modification, truck routing and access to the facility will not change. The primary truck routing plan avoids the use of South Pearl Street in the vicinity of the Ezra Prentice homes and directs the hauling vehicles to the transfer station using South Port Road, Smith Boulevard and I-787 to Church Street (see proposed traffic flow pattern on Regional Overview Map, Figure 1).

As part of the initial application review, the NYSDEC has requested a more detailed analysis supporting WMNY's conclusion that the proposed permit modification would reduce the amount of traffic utilizing the facility from the permitted tonnage. Due to the fact that MSW in general weighs more per unit volume than the currently accepted materials received at the facility, the proposed permit modification would reduce the amount of traffic from the permitted tonnage. This report confirms that the proposed modification would result in less traffic than under current operating conditions and therefore does not result in any additional environmental impact associated with traffic.

1.1. Site Description

The facility is located at 100 Boat Street in the central portion of the Port of Albany, City of Albany, Albany County, New York. Figure 1 (Regional Overview Map) shows the general site location. Waste Management's Transfer Station and Hauling Division facilities are located on two adjacent parcels, encompassing a total of approximately six acres. The site layout is shown on Figure 2 – Site Plan and shows the transfer station located on the east side of the property.

The site has historically operated as a transfer facility since the late 1980s and is currently permitted to receive, handle and process 749 tons per day (tpd) of dry commercial wastes, construction and demolition (C&D) debris, and source-separated recyclables. All processing of materials delivered to the site by collection vehicles occurs inside the 19,659-sf transfer station building.

The materials accepted at the Port of Albany Transfer Station are generated and collected within the City of Albany and throughout eight surrounding counties.

1.2. Proposed Changes to Operations

As part of the proposed permit modification, WMNY proposes to accept MSW in addition to the current materials at the Port of Albany transfer facility with no change to the currently permitted limit of 749 tpd.

1.3. **Purpose**

This Traffic Analysis Report was prepared to identify changes in traffic conditions at the Port of Albany transfer station under proposed conditions in comparison to current conditions and existing permit conditions. The existing permit conditions reflect traffic volume if the transfer station were receiving the maximum permitted daily tonnage (749 tpd) and represent the conditions to compare any environmental impacts associated with traffic. The current conditions reflect the traffic volume observed between the period of March 2019 to March 2020 which identified an actual average daily tonnage of 105 tpd. It should be noted that these current conditions will vary with changes in material receipt volume from WMNY's hauling division and 3rd party customers in any given year. As a result, the potential quantitative and qualitative changes to traffic conditions were studied.

2.0 EXISTING CONDITIONS

2.1. Current Conditions

As a baseline for the analysis, an accounting of the peak current truck traffic at the facility was obtained. This data represents an estimate of the trucks accessing the facility during a typical peak operating day between March 1, 2019 and March 1, 2020. This timeframe was chosen to represent a large, current dataset, while eliminating the most recent timeframe which might be affected by solid waste management system changes due to the Covid-19 pandemic.

The current peak traffic conditions at the facility were determined based on actual vehicle and material receipt tonnage data obtained from the onsite weigh scale software and vehicle counter placed at the site entrance. The truck scale software was used to track the number of loaded vehicles entering the site for tipping as well as the transfer vehicles exiting the site to transport materials to the off-site materials management facility (landfill, materials recovery facility, recyclables processor, etc.), including the weight of these vehicles. In addition to the vehicles entering the transfer station, there are also hauling division trucks that operate adjacent to the facility which contribute to local traffic, but do not utilize the transfer station and are therefore excluded from the weigh scale software dataset.

To include the non-scaled trucks, a traffic counter was placed at the site entrance for 7 days in July 2020, at the location shown in Figure 2 (attached). The data gathered by the vehicle counter included all vehicles entering the site, scaled and non-scaled, and separated the vehicles into class types from class 1 through class 14 based on the number of axles, number of tires per axle, and axle spacing of each vehicle. Vehicles sorted into classes 4 through 14 are considered non-passenger vehicles accessing the site for material tipping, material transfer, or hauling division activities. The data obtained from the vehicle counter was tabulated into hourly counts for each day.

In addition to the vehicle counter equipment, video recording equipment was installed at the site to provide video footage for confirmation of vehicle count data. The vehicle count data indicated a number of “wrong way” trips across the vehicle counter. Review of the video footage indicated that these wrong way trips were attributable to a small scale operation unrelated to the facility on the parcel to the west of the facility and could not be attributed to the transfer station activities. The video footage was used to count the number of these trips during each hour and they were removed from the data set. Additionally, on July 20, 2020, during the day’s peak hour, 28 trucks were counted by the vehicle counter equipment. Video footage could not confirm the quantity of truck trips, so this peak hour was omitted as an outlier so as not to artificially inflate the current truck count data. The truck count data from the weigh scale software for the days corresponding with the vehicle count data, were then removed from the modified vehicle counter dataset, resulting in an hourly accounting of non-scaled trucks entering the facility.

To obtain an estimate of peak daily scaled traffic for the facility, the scale data referenced above was used. In order to determine a typical peak day, the vehicle and tonnage data of the peak 10 vehicle days during the subject data set were averaged for each hour. The peak 10 days during 2019 from largest to smallest were June 11th, October 4th, March 19th, May 8th, March 27th, May 7th, June 12th, April 18th, May 28th, and May 30th. The non-scaled truck count was then combined with the normalized peak scale count. By combining these two datasets, a normalized peak vehicle dataset which includes both scaled and non-scaled trucks was generated. This combined dataset was used as a baseline for current peak hourly conditions in the traffic study.

2.2. Permitted Conditions

The permitted conditions reflect traffic conditions allowed by WMNY's current permit and represent the conditions if the transfer station were receiving the maximum permitted daily tonnage under their existing permit (749 tpd). The dataset used as the permitted conditions was developed during a previous study performed in support of a Part 360 permit modification application NOIA response for the facility completed by Earth Tech Northeast. Inc., dated October 2005. This study generated traffic counts using a waste/recyclables acceptance rate of 749 tons/day from the data for the previous permit limit of 500 tons/day. The permitted conditions dataset was not modified from this previous study.

3.0 PROPOSED CONDITIONS

The proposed conditions reflect estimated peak traffic counts under the proposed conditions, with the facility accepting mixed MSW and operating at the maximum permitted tonnage (749 tpd). The assumed average inbound truck weights by material are as follows: 8.5 tons/load MSW, 3.2 tons/load C&D, and 3 tons/load recyclables. The assumed average outbound truck weights by material are as follows: 30 tons/load MSW, 26 tons/load C&D, and 12.65 tons/load recyclables. To generate expected traffic counts at maximum proposed conditions, the projected maximum inbound tonnages were divided by the assumed average truck weight for each waste type. The hourly distribution from the current conditions dataset was then applied in order to establish projected peak hourly traffic counts. The estimates for future tonnages were broken down by waste type (i.e. dry waste, MSW, and recyclables) based on WMNY's historical operating experience in the region and known waste tonnage needs for their existing hauling division located on site. The current hourly distribution was assumed to be consistent with future distribution. This method assumed the additional accepted waste breakdown as follows: Mixed MSW, 55 %; C&D/dry MSW, 38.5%; and recyclables, 6.5%. Because mixed MSW loads will be denser, there will be fewer mixed MSW truck trips in comparison to the other material types for the same tonnage, resulting in an overall reduction in truck trips.

Hauling division vehicles are parked adjacent to the facility overnight, however, most of these vehicles do not tip waste at the transfer station at the end of their route because they are collecting mixed MSW, which is not currently accepted at the facility. These vehicles leave the facility at the beginning of each day and return at the end of each day. However, under the proposed conditions, it is assumed that these vehicles would begin tipping at the Port of Albany Transfer Station facility, thus, the additional tonnage delivered by these vehicles would not contribute additional truck trips under proposed conditions, as they are already accessing the site.

4.0 RESULTS

Table 1, below, compares the proposed hourly inbound and outbound traffic to current and currently permitted conditions.

Table 1 – Traffic Comparison Summary

	Current			Permit (749 tpd)			Proposed (749 tpd)		
	Total Inbound Truck Trips	Total Outbound Truck Trips	Total Trucks Per Day	Total Inbound Truck Trips	Total Outbound Truck Trips	Total Trucks Per Day	Total Inbound Truck Trips	Total Outbound Truck Trips	Total Trucks Per Day
6am-7am	5	0	5	26	2	28	10	0	10
7am-8am	5	1	6	17	3	20	9	2	11
8am-9am	7	2	9	14	3	17	16	4	20
9am-10am	7	3	10	8	3	11	13	5	18
10am-11am	8	1	9	17	3	20	13	2	15
11am-12pm	9	3	12	16	2	18	19	5	24
12pm-1pm	9	1	10	13	3	16	16	2	18
1pm-2pm	13	1	14	16	4	20	19	2	21
2pm-3pm	12	2	14	17	4	21	19	4	23
3pm-4pm	8	2	10	13	2	15	10	4	14
4pm-5pm	11	0	11	5	2	7	10	0	10
Daily Sum:	94	16	110	162	31	193	154	29	183
Percent of POA truck traffic:			9%			14%			14%
Percent of POA traffic:			3%			5%			5%

A comparison of proposed conditions to the current permitted tonnage limit shows a decrease in truck trips by 5%. Under proposed conditions, there are 24 truck trips during the peak hour; 4 truck trips less than permitted conditions. Additionally, the proposed daily truck count of 183 is approximately 10 trucks less than under the permitted conditions (193 trucks/day).

It is important to note this analysis of current to proposed conditions is conservative since the trucks currently accessing the site but not tipping (non-scaled trucks) would haul MSW and tip at the transfer station under proposed conditions.

5.0 VEHICLE TYPE DISTRIBUTION

To assess changes in traffic associated with material type, the vehicle type distributions for current and proposed conditions were analyzed. The scale vehicle counts from 2019 were divided into categories based on number of axles and vehicle type and this data is presented in Table 2. The majority of current inbound trucks were roll-offs, by count and by tonnage.

Table 2 – Scale Vehicles By Type

	Inbound								Outbound
Number of Axles	**Two (2)**				**Three (3)**			**Four (4)**	**Five (5)**
Truck Type	Passenger	Box Truck	Dump Truck	Total	Pickup W/ Trailer	Front Loader	Total	Roll Off	Tractor Trailer

1pm-2pm	5	1	6	2	1	0	0	0	8	11	0	0	0	0	2	0	2
2pm-3pm	5	1	6	2	1	0	0	0	8	11	0	0	0	0	2	0	2
3pm-4pm	3	0	3	1	1	0	0	0	4	6	0	0	0	0	1	0	1
4pm-5pm	3	0	3	1	1	0	0	0	4	6	0	0	0	0	1	0	1
Daily Sum	43	5	48	19	11	0	0	0	60	90	0	0	0	0	16	0	16

Table 3 – 2020 Maximum Proposed Inbound Traffic by Type

The distribution of truck type from the 2019 scale data was applied to proposed inbound traffic estimate to generate Table 3, which shows the estimated proposed inbound vehicles by truck type.

The majority of proposed inbound mixed MSW vehicles would be packer trucks; however, the number of packer trucks would still be exceeded by the number of roll-offs containing C&D/dry MSW.

6.0 OVERALL PORT TRAFFIC CONDITIONS

As shown in Figure 1, the Church Street/Broadway intersection and the South Port Road/South Pearl Street intersection will be used for traffic associated with the transfer station. According to the Final Technical Memorandum of the South Albany Truck Traffic Study prepared by Creighton Manning in 2017, the Church Street/Broadway intersection has an average of 1,916 vehicle trips on weekdays and the South Port Road/South Pearl Street intersection has an average of 1,910 vehicle trips on weekdays. Of these vehicle trips, 582 are heavy vehicles at the Church Street/Broadway intersection, and 684 are heavy vehicles at the South Port Road/South Pearl Street intersection. Based on the data presented above, 110 of these heavy vehicles are attributed to the facility.

7.0 CONCLUSIONS

Truck access to the facility would not change from what has been occurring. The primary truck routing plan would avoid the use of South Pearl Street in the vicinity of the Ezra Prentice homes (community) and directs the hauling vehicles to the transfer station using South Port Road, Smith Boulevard and I-787 to Church Street thereby resulting in no significant impact to the community from the proposed permit modification.

The proposed permitted condition will result in a decrease in total daily and peak hour truck trips to the facility when compared to the existing permitted conditions. Therefore, the proposed modification has no significant environmental impact associated with traffic.

It is noted that under all of these conditions the truck traffic associated with the transfer station represents a small portion of the total Port of Albany truck traffic. When compared to the overall Port traffic at the site access intersections, the truck trips associated with the WMNY transfer station would represent 5% under both permitted and proposed conditions based on data from the 2017 South Albany Truck Traffic Study. This indicates the proposed conditions will not result in an increase in volume.

When compared to just the heavy vehicles at these intersections, the truck trips associated with the WMNY transfer station would represent 14% under both permitted and proposed conditions.

Overall, the traffic levels at the facility are expected to decrease in comparison to the currently approved permitted condition at the site, and therefore no impacts on the surrounding roadways are expected.

Re: DEC
WMNY Port of Albany Transfer Facility
100 Boat Street, Albany, NY 12202
17PR03009

Dear Jillian Blake:

Thank you for requesting the comments of the Office of Parks, Recreation and Historic Preservation (OPRHP). We have reviewed the project in accordance with the New York State Historic Preservation Act of 1980 (Section 14.09 of the New York Parks, Recreation and Historic Preservation Law). These comments are those of the OPRHP and relate only to Historic/Cultural resources. They do not include potential environmental impacts to New York State Parkland that may be involved in or near your project. Such impacts must be considered as part of the environmental review of the project pursuant to the State Environmental Quality Review Act (New York Environmental Conservation Law Article 8) and its implementing regulations (6 NYCRR Part 617).

Based upon this review, it is the opinion of OPRHP that no properties, including archaeological and/or historic resources, listed in or eligible for the New York State and National Registers of Historic Places will be impacted by this project.

If further correspondence is required regarding this project, please be sure to refer to the OPRHP Project Review (PR) number noted above.

Sincerely,

R. Daniel Mackay

Deputy Commissioner for Historic Preservation
Division for Historic Preservation
