THINK GREEN®. Think Sustainability Services.

With sustainability a concern for the global community, we are committed to helping our customers innovate and optimize in creating sustainable businesses. At Waste Management Sustainability Services, we aren’t just advocates for improved environmental performance, we make it happen.

Collaboration is the cornerstone of every successful sustainability plan.

Whether you are just starting out on the path toward sustainability or have already begun your journey, our sustainability consultants and operations teams work closely with you to build a customized, comprehensive program. We apply our knowledge derived from experience across industries and we develop a strategy with far-reaching impact. We leverage the resources, industry assets and expertise of the nation’s largest network of collection, disposal and recycling facilities to develop solutions that adapt to a company’s evolving needs. Our solutions include the environmental management of resources and materials, strategic planning for the optimization of efficient materials capture, and opportunities for waste reduction, materials recycling, and diversion. These solutions are reinforced by environmental assessments, right-sizing waste collection, transportation, and disposal needs, and a commitment to ensuring a balance in material diversion from landfill and environmental impact. Each client is assigned its own personalized team of materials management experts who embed themselves in the organization, on site or remotely, to ensure that programs are compliant and executed to drive economic, environmental and social value. We can also help you track and measure results, amplify progress towards your sustainability goals, and promote and celebrate your accomplishments.

We are connected by a common passion for a sustainable tomorrow.

Our mission is to equip you with the insight and direction needed to build sustainable businesses and become better stewards of the environment. With every business that makes a commitment to sustainability, we come one step closer to preserving resources for generations to come.
