

Why should we watch your compactors?

Because you're watching your bottom line.

Get the most value from every pickup with our compactor monitoring service.

With our compactor monitoring service, we keep track of your compactors to identify their target weight and pickup time. Waste Management specialists watch your compactors remotely and use our proprietary hardware and software to maximize each pickup. We strive to ensure that your loads are never too heavy or too light – all to get the most value for your business.

In addition, this service takes the burden of looking after your compactors off your shoulders – because you have more important things to watch than your trash.

How much can we save you? That all depends. Let's look at your situation and perform a complete cost-savings breakdown.

Here's how our compactor monitoring service works for you and your bottom line:

1. Waste Management installs our patented monitor near your compactor and connects it to your compactor's control panel and hydraulic hose.
2. The monitor then wirelessly transmits pertinent information such as pressure, weight, and usage patterns back to our monitoring center.
3. Our experienced professionals analyze your unique operating characteristics and adjust your pickup schedule to ensure that you get the maximum value with every haul.

BEFORE
15 tons
5 hauls per month
6 days between hauls
\$151 per ton disposed

AFTER
15 tons
3 hauls per month
10 days between hauls
\$130 per ton disposed
2 tons yearly reduction of greenhouse gas emissions

FAQs on our COMPACTOR MONITORING SERVICE

Q: What type of businesses can benefit from Waste Management's compactor monitoring service?

A: Any company that uses compactors, especially in multiple locations, including:

- > Grocery stores and chains
- > Shopping malls
- > Office buildings
- > Hotels and motels
- > Industrial facilities

Q: Why is it better than the lights and pressure gauges already on my compactor?

A: Gauges and lights can be unreliable. When non-compactable materials are put into the compactor, gauges and lights may often indicate the compactor is full, resulting in an extra pickup that could have been avoided. Plus, with this service, you do not have to spend any time checking the compactor or scheduling pickups – we do all the work for you.

Q: What kind of data will this service generate?

A: We monitor the status of your compactor 24 hours a day, accurately tracking such functions as: time of operation, pressure, number of cycles in any given period and the operational status of the compactor.

Q: Is there any capital outlay required?

A: No, you do not have to buy any equipment. There is only a one-time installation and set-up fee.

Q: Are there any charges for the wireless data transmission.

A: No.
