

CONTAMINATION AND OVERAGE MONITORING PROGRAM STARTS SEPTEMBER 1, 2023.

In 2022, Senate Bill 1383 (SB 1383) went into effect requiring everyone in the State of California to have organics and recycling collection services and to sort their waste properly. Jurisdictions like Oro Loma Sanitary District are also required to monitor and enforce these requirements. The goal of the mandate is to reduce greenhouse gas emissions by keeping compostables and recyclables out of the landfill, which helps create a sustainable future for the next generation.

HOW DOES THE PROGRAM WORK?

WM will use WM Smart TruckSM technology to photograph overfilled containers and/or contaminants in your collection containers and will send a notification with a photograph explaining what was found, along with tips to avoid overage and/or contamination charges in the future. Refer to the enclosed FAQs to learn more about this technology. A “what goes where” flier is also included to help avoid contamination.

OVERAGE CHARGES BEGIN SEPTEMBER 1, 2023

Beginning September 2023, additional charges will be implemented after two warnings when overfilled containers are found. These charges help offset costs associated with processing and disposal.

Charges apply after two warnings per waste stream per incident type.

Overage	1st & 2nd Incidents	3rd Incident CART	3rd Incident BIN
Trash /Recycling / Organics	No Charge	\$25	\$150

CONTAMINATION CHARGES BEGIN JANUARY 16, 2024

Beginning January 2024, additional charges will be implemented after two warnings when contaminated containers are found. These charges help offset costs associated with processing and disposal.

Charges apply after two warnings per waste stream per incident type.

Contamination	1st & 2nd Incidents	3rd Incident CART	3rd Incident BIN
Recycling / Organics	No Charge	\$25	\$75

Four chargeable incidents may result in your trash container or service being increased to manage your trash volume.

HOW DO I AVOID THESE ADDITIONAL CHARGES?

Please refer to the recycling and organics sorting guide included with this letter.

Place only empty bottles, cans, paper, and cardboard into your recycling cart. Do not bag recyclables.

Place only food, food soiled paper, and yard trimmings into your organics cart.

AVOID OVERFILLING CONTAINERS

Keeping the lids closed on your containers reduces litter in our streets and pollution in our storm drains, helping keep OLSD clean and green.

Overfilled containers a problem? Call WM at 510-613-8710 to explore your options.

IS THIS THE FIRST TIME CAMERAS HAVE BEEN USED ON A WM COLLECTION TRUCK?

No, WM has used cameras on trucks for over 10 years. We use mounted cameras to improve safety by assisting our drivers with rear and side-view perspectives, and documenting driving incidents and detecting overfilled commercial containers.

HOW CAN YOU TELL IF A CONTAINER IS CONTAMINATED OR IS OVERFILLED?

Mounted cameras record the containers serviced.

The pictures (right) show the contaminated contents of a recycling container that was just collected from a service address and placed in our truck. The cameras will also detect overfilled containers at the time of collection.

WHAT HAPPENS WHEN WM SMART TRUCKSM TECHNOLOGY DETECTS A SERVICE ISSUE?

A dedicated team of service consultants reviews the images from each route daily. They look for overfilled and contaminated containers and a customer notification is generated and/or a charge is applied to a service account if contamination or overages are found.

WHAT ABOUT PRIVACY?

WM will not share the images or customer information with third parties for marketing or data mining. The photographs or videos are used to educate and inform customers and the district to improve collection service, recycling, and divert materials away from the landfills.

WHAT QUALITY CONTROL IS IN PLACE TO ENSURE ACCURACY?

Our service consultants are trained to carefully identify overages and contamination. We have standard protocols for assessing every situation with built-in checks and balances to ensure accuracy.

CAN A CUSTOMER DISPUTE A CHARGE?

Yes, customers can contact customer service. The customer service phone number, 510-613-8710, is provided in the email or letter notifying a customer of an overage or contamination incident. Trained staff will review the incident images with the customer. If we made a mistake, the charge will be removed and our records will be updated to avoid the error in the future.
