

Do You Know What Happens to the Organics that You Recycle?

When You Sort Organics Correctly
You Are Giving Them a Second Life

Place your food scraps, food-soiled paper and yard waste in the green lid organics cart.

WM picks up organics on your scheduled service day.

Organics are processed into compost at the local landfill.

Compost is sold and used to grow new crops for consumers.

Placing your organics in the green lid cart keeps these materials out of our landfills, which helps our environment by reducing emissions to combat climate change.
