

Simi Valley Landfill and Recycling Center

Fulfilling an Essential Need

For more than 30 years, the Simi Valley Landfill and Recycling Center (SVLRC) has served the disposal and recycling needs of residents in Ventura County, south Santa Barbara County and west San Fernando Valley. Waste Management is proposing the modernization and expansion project to meet the growing needs of the community.

Ventura County Growth

- Within the last 30 years, Ventura County's population has more than doubled
- The SVLRC provides 60% of Ventura County's daily refuse disposal needs
- By 2030, Ventura County is projected to produce 6,000 tons of trash daily

The Regional Waste System

Like most major infrastructure, landfills are regional in nature and are a part of a larger system that includes a variety of facilities to help us better manage our trash and recycling.

Ventura County is fortunate to have two landfills (SVLRC and Toland Road) that help residents manage more than 90% of solid waste locally. Less than two percent of the waste SVLRC takes in is from Los Angeles. But, Ventura County is dependent on other communities to manage:

- Hazardous waste
- Tires
- Recyclables such as bottles, cans, paper
- Sewage sludge
