

ENERGY STAR® Certification

As the price of energy continues to rise, many building owners and managers are seeking ways to reduce energy costs and become more energy-efficient. There's also an established way for these buildings to broadcast their progress to current and prospective tenants. The U.S. Environmental Protection Agency (EPA) developed the ENERGY STAR® Certification to recognize buildings in the top 25% of energy performers in the country.

On average, according to the U.S. Environmental Protection Agency, buildings achieving this certification use 35% less energy and cost less to operate. Moreover, that means having the opportunity to retain or attract tenants that value sustainability and are willing to pay for it.

A Partner to Help Achieve Certification

Our consulting team includes experienced professionals who can help you through the stages of the ENERGY STAR certification process – from benchmarking with the ENERGY STAR Portfolio Manager through application validation. Given the multiple technical requirements involved, utilizing our services as a third-party subject matter expert can save your organization time and money, while ensuring a more accurate product.

If your building is not currently operating at the ENERGY STAR® threshold, our consultants can help improve the performance of your facility and move you toward certification. We can also assist in designing new buildings with energy efficiency in mind, help create energy management policies, and provide recommendations for existing buildings to achieve certification more quickly and easily.

Our participation in the ENERGY STAR program can also help your organization in earning other building certifications, including the BOMA 360 Performance Program® and LEED. Our consultants will review your project for applicability of these other programs, enhancing the time and cost savings we can deliver.

About Sustainability Services

Waste Management Sustainability Services is a nationwide network of environmental professionals offering sustainability advisory services, environmental and project management experience to help companies advance along the path toward sustainability. By leveraging the network of assets and expertise of WM, the leading provider of comprehensive waste and environmental services in North America, our team can design and implement value-driven solutions unrivaled in the industry.
